Independent Inquiry into care provided by Mid Staffordshire NHS Foundation Trust January 2005 - March 2009
Open and Distance Education in Australia, Europe and the Americas

JAKOB LIFinding Educational Resources on the Internet The Stationery Office

Concerns about mortality and the standard of care provided at the Mid Staffordshire NHS Foundation Trust resulted in an investigation by the Healthcare Commission which published a highly critical report in March 2009, followed by two reviews commissioned by the Department of Health. These investigations gave rise to widespread public concern and a loss of confidence in the Trust, its services and management. This Inquiry was set up primarily to give those most affected by poor care an opportunity to tell their stories and to ensure that the lessons learned were fully taken into account in the rebuilding of confidence in the Trust. The evidence received about the patient experience covered many areas of basic nursing and medical care, communication and discharge management. The culture of the Trust was not conducive to providing good care for patients or providing a supportive working environment for staff due to: attitudes of patients and staff; bullying; target-driven priorities; disengagement from management; low staff morale; isolation from the wider NHS community; lack of openness; acceptance of poor standards of conduct; reliance on external assessments; denial. The report also looks at the management of significant issues - ward reconfiguration, finance, staff cuts - governance, staff review, the Board, mortality statistics and external organisations. Major themes identified by the Inquiry are: focus on process not outcomes; failure to listen to complaints; insufficient attention to maintenance of professional standards; lack of support for staff; failure to meet the challenge of care for the elderly; lack of transparency; disregard of the significance of mortality statistics.

The Millennium Survey John Wiley & Sons

This book is open access under a CC BY 4.0 license. This book describes the history, structure and institutions of open and distance education in six countries: Australia, Brazil, Canada, Germany, the UK and the US. It discusses how open and distance education is evolving in a digital age to reflect the needs and circumstances of national higher education systems in these countries, and explores the similarities and differences between the ways in which they are organized and structured. It is the first book to make such comparisons and draw conclusions about the nature of open and distance education in the context of various national higher education systems. In a digital era with growing use of online education as well as open and distance education, this book is particularly useful for policy-makers and senior administrators who want to learn about organizing and expanding open and distance education provision. It is also a valuable reference for researchers, academics and students interested in understanding the different approaches to open and distance education.

Measuring the Wealth of Nations Springer

Intimate partner violence (IPV), defined as physical, sexual, emotional, and economic abuse and controlling behaviors inflicted within intimate partner relationships, is a global crisis that extends beyond national and sociocultural boundaries, affecting people of all ages, religions, ethnicities, and economic backgrounds. Though studies exist that seek to explain how people become trapped within violent relationships and what factors facilitate survival, escape and safety, this book provides

fresh insights into this complex and multifaceted issue. People often ask of women in abusive relationships “why does she stay?” Critics suggest that this question carries implicit notions of victim blame and fails to hold to account the perpetrators of abuse. The studies described in this book, however, explore the question from the perspectives of survivors and represent a shift away from individual pathology to an approach based on the recognition of structural oppression, agency and resilience. Comprising eight chapters, new theoretical frameworks for the analysis of IPV are provided to guide practitioners and policy makers in improving services for vulnerable people in abusive relationships, and a range of studies into the experiences of a diverse range of survivors, including mothers in Portugal, women who experienced child marriage in Uganda, and refugees in the United States of America, generate findings which elucidate perspectives from marginalised and under-researched groups.

Population and Housing Questions, 1790-1980 Amsterdam University Press

This book presents selected papers on the factors that serve to influence an individual’s capacity in financial decision-making. Initial chapters provide an overview of the cognitive factors affecting financial decisions and suggest a link between limited cognitive capacity and the need for financial education. The book then expands on these cognitive limitations to explore the tendency for overconfidence in decision-making and the interplay between rational and irrational factors. Later contributions show how credit card companies benefit from limitations in consumer financial literacy, how gender and cognition intersect to play an important role in financial decision-making, and how to improve financial capacity through financial literacy and education campaigns, including those addressing developed marketplaces. This comprehensive collection of papers will be of value to all readers who seek to better understand the multi-factorial and complex nature of personal financial management in today’s economic climate.

ECommerce and the Effects of Technology on Taxation MDPI

This resource is written for health professionals working with Aboriginal and Torres Strait Islander people experiencing social and emotional wellbeing issues and mental health conditions. It provides information on the issues influencing mental health, good mental health practice, and strategies for working with specific groups. Over half of the authors in this second edition are Indigenous people themselves, reflecting the growing number of Aboriginal and Torres Strait Islander experts who are writing and adding to the body of knowledge around mental health and associated areas.

Agricultural Expansion, Poverty Reduction, and Environment in the Tropical Forests Cengage Learning

This open access book presents fresh ethnographic work from the regions of Africa and Melanesia—where the popularity of charismatic Christianity can be linked to a revival and transformation of witchcraft. The volume demonstrates how the Holy Spirit has become an adversary to the reconfirmed presence of witches, demons, and sorcerers as manifestations of evil. We learn how this is articulated in spiritual warfare, in crusades, and in healing or witch-killing raids. The contributors highlight what happens to phenomena that people address as locally specific witchcraft or sorcery when re-molded within the universalist Pentecostal demonology, vocabulary, and confrontational methodology.

Global Governance and the Emergence of Global Institutions for the 21st Century CreateSpace

Gambling monkeys, dancing zombies and mountain lions on treadmills are just a few projects exposed in Wastebook 2014 – highlighting \$25 billion in Washington's worst spending of the year. Wastebook 2014 — the report Washington doesn't want you to read — reveals the 100 most outlandish government expenditures this year, costing taxpayers billions of dollars. “With no one watching over the vast bureaucracy, the problem is not just what Washington isn't doing, but what it is doing.” Dr. Coburn said. “Only someone with too much of someone else's money and not enough accountability for how it was being spent could come up some of these projects.” “I have learned from these experiences that Washington will never change itself. But even if the politicians won't stop stupid spending, taxpayers always have the last word.” Congress actually forced federal agencies to waste billions of dollars for purely parochial, political purposes. For example, lawmakers attached a rider to a larger bill requiring NASA to build a \$350 million launch pad tower, which was mothballed as soon as it was completed because the rockets it was designed to test were scrapped years ago. Similarly, when USDA attempted to close an unneeded sheep research station costing nearly \$2 million every year to operate, politicians in the region stepped in to keep it open. Examples of wasteful spending highlighted in “Wastebook 2014” include: • Coast guard party patrols – \$100,000 • Watching grass grow – \$10,000 • State department tweets @ terrorists – \$3 million • Swedish massages for rabbits – \$387,000 • Paid vacations for bureaucrats gone wild – \$20 million • Mountain lions on a treadmill – \$856,000 • Synchronized swimming for sea monkeys – \$50,000 • Pentagon to destroy \$16 billion in unused ammunition -- \$1 billion • Scientists hope monkey gambling unlocks secrets of free will – \$171,000 • Rich and famous rent out their luxury pads tax free – \$10 million • Studying “hangry” spouses stabbing voodoo dolls – \$331,000 • Promoting U.S. culture around the globe with nose flutists – \$90 million

Exploring Values in the Public School Earthscan

This book provides an alternate foundation for the measurement of the production of nations, and applies it to the U.S. economy for the postwar period. The patterns that result are significantly different from those derived within conventional systems of national accounts. Conventional national accounts seriously distort basic economic aggregates, because they classify military, bureaucratic and financial activities as the creation of new wealth, when in fact they should be classified as forms of social consumption that, like personal consumption, actually use up social wealth in the performance of their functions.

Comparative National Balance Sheets UNESCO Publishing

This book focuses on the impact of technology on taxation and deals with the broad effect of technology on diverse taxation systems. It addresses the highly relevant eTax issue and argues that while VAT may not be the ultimate solution with regard to taxing electronic commerce, it can be demonstrated to be the most effective solution to date. The book analyzes the application and the effectiveness of traditional income tax principles in contradistinction to VAT principles. Taking into account rapidly ameliorating technology, the book next assesses the compatibility between electronic commerce and diverse systems of taxation. Using case studies of Amazon.com and Second Life, as well as additional practical examples, the book demonstrates the effectiveness of VAT in respect of electronic commerce and ameliorating technology in the incalculable and borderless realm of cyberspace.

Pentecostalism and Witchcraft World Bank Publications

Existing research understands co-production as leading to shifts in roles of the public sector institutions and their staffs. The shift is seen in the way that a discursive use of the term service provision with embedded logics encompassing fiscal accountability, performance measurement, efficiency, and process regulation has changed towards discourses that embrace collaboration between the public sector front staff and the citizens, with the aim of developing legitimate and effective welfare services that are co-produced by means of active participation and distributed decision making. However, this change requires new approaches to the way in which the implementation of new practices and tools is executed in practice as studied and researched, and how the new practices and tools are understood and evaluated in organizations. *Processual Perspectives on the Co-Production Turn in Public Sector Organizations* is an essential reference book that examines, unfolds, and develops approaches to co-production and implementation as dynamic, processual, collaborative, sensemaking, and as requiring and resulting in capacity building and learning. Moreover, the book examines new approaches to engage citizens and public sector actors in collaborative and co-productive processes, especially with concern for new goals pertaining to sustainability, social equity, democratic legitimacy, etc. Covering topics that include knowledge management and collective leadership, the book presents perspectives on capacity building, learning, change, and evaluation in organizations and current research in different areas of the public sector. It is intended for public sector administrators and managers investigating the relevancy, approaches, and methods in co-production. Furthermore, it targets civil actors and welfare service users, leaders and managers of public organizations, researchers, academicians, and students in programs that include social welfare development, public administration, political science, and organizational development.

Culture and the Economy in the Internet Age Springer Nature

This title provides state-of-the-art theory and practice for capacity building. The book is packed with real-life examples and is crafted for an audience of practitioners in capacity development with special attention to those working at intermediate levels between local and the national scales.

Images of the 1890s ; The Museum of Modern Art, New York Rowman & Littlefield Education

A state-of-the-art psychological perspective on team working and collaborative organizational processes This handbook makes a unique contribution to organizational psychology and HRM by providing comprehensive international coverage of the contemporary field of team working and collaborative organizational processes. It provides critical reviews of key topics related to teams including design, diversity, leadership, trust processes and performance measurement, drawing on the work of leading thinkers including Linda Argote, Neal Ashkanasy, Robert Kraut, Floor Rink and Daan van Knippenberg.

Could VAT be the ETax Solution? Springer

This book is a collection of chapters penned by practitioners from around the world on the impact that disinformation and fake news has had in both the online and social sphere. While much has been said about individual disinformation campaigns in specific countries, this book offers a panoramic view of how these campaigns are conducted, who they target, and how they are spread. By bringing together research on specific countries and international data mined from

questionnaires and online studies, the understanding of the term 'fake news' is greatly expanded and the issues we face are brought to light. The book includes contributions by experts such as Jean-Baptiste Vilmer (Macron Leaks), and includes case studies from Asia, such as Singapore and Myanmar, written in an accessible manner for the general interested reader, practitioners and policymakers in the field.

Financial Literacy and the Limits of Financial Decision-Making Pearson Education India

"In the past fifteen years, file sharing of digital cultural works between individuals has been at the center of a number of debates on the future of culture itself. To some, sharing constitutes piracy, to be fought against and eradicated. Others see it as unavoidable, and table proposals to compensate for its harmful effects. Meanwhile, little progress has been made towards addressing the real challenges facing culture in a digital world. Sharing starts from a radically different viewpoint, namely that the non-market sharing of digital works is both legitimate and useful. It supports this premise with empirical research, demonstrating that non-market sharing leads to more diversity in the attention given to various works. Taking stock of what we have learned about the cultural economy in recent years, Sharing sets out the conditions necessary for valuable cultural functions to remain sustainable in this context."--[P] 4 of cover.

Orange Groove Books

Achieve success in your physics course by making the most of what PHYSICS FOR SCIENTISTS AND ENGINEERS has to offer. From a host of in-text features to a range of outstanding technology resources, you'll have everything you need to understand the natural forces and principles of physics. Throughout every chapter, the authors have built in a wide range of examples, exercises, and illustrations that will help you understand the laws of physics AND succeed in your course! Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Teaching Kids to Care Cambridge University Press

Considers how values can be taught effectively in public schools. Follows a program initiated in a fifth-grade classroom in Indiana. Provides an outline through which students can reflect on behavior and relate their responses to their own actions.

Strategy, Planning, and Operation Policy Press

Includes statistical tables and graphs.

'Supply Chain Management' illustrates the key drivers of good supply chain management in order to help students understand what creates a competitive advantage. It also provides strong coverage of analytic skills so that students can gauge the effectiveness of the techniques described.

Twenty Censuses Cambridge University Press

Loyalty is one of the main assets of a brand. In today's markets, achieving and maintaining loyal customers has become an increasingly complex challenge for brands due to the widespread acceptance and adoption of diverse technologies by which customers communicate with brands. Customers use different channels (physical, web, apps, social media) to seek information about a brand, communicate with it, chat about the brand and purchase its products. Firms are thus continuously changing and adapting their processes to provide customers with agile communication channels and coherent, integrated brand experiences through the different channels in which customers are present. In this context, understanding how brand management can improve value co-creation and multichannel experience—among other issues—and contribute to improving a brand's portfolio of loyal customers constitutes an area of special interest for academics and marketing professionals. This Special Issue explores new areas of customer loyalty and brand management, providing new insights into the field. Both concepts have evolved over the last decade to encompass such concepts and practices as brand image, experiences, multichannel context, multimedia platforms and value co-creation, as well as relational variables such as trust, engagement and identification (among others).

Springer

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.
