FinTech, an abbreviated term for financial technology, is a digital revolution changing the way banking and financial services are being used both by individuals and businesses. As these changes continue to take place, the financial industry is focused on technological innovation and feeding into this digital revolution to better serve consumers who are looking for easier ways to invest, transfer money, use banking services, and more. FinTech is increasing accessibility to financial services, automating these services, expanding financial options, and enabling online payments and banking. While the benefits are being continually seen and this technology is becoming more widely accepted, there are still challenges facing the technology that include security concerns. To understand FinTech and its role in society, both the benefits and challenges

must be reviewed and discussed for a holistic view on the digital innovations changing the face of the financial industry. The Research Anthology on Concepts, Applications, and Challenges of FinTech covers the latest technologies in FinTech with a comprehensive view of the impact on the industry, where these technologies are implemented, how they are improving

financial services, and the security applications and challenges being faced. The chapters cover the options FinTech has unlocked, such as mobile banking and virtual transactions, while also focusing on the workings of the technology itself and security applications, such as blockchain and cryptocurrency. This book is a valuable reference tool

for accountants, bankers, financial planners, financial analysts, business managers, economists, computer scientists, academicians, researchers, financial professionals, and students. **Global Impacts, Challenges and Future Directions of Pest Management** Springer These proceedings compile selected papers from presenters at the

introduction to current scholarship in the field, with indications of future directions for enhancing the contribution to knowledge. With regional coverage of key emerging economies such as Brazil, Russia, India and China, the team of contributors analyse issues in accounting in detail, while shedding light on the role of the accounting profession in providing accountability and governance across the

developing world. Each chapter is headed up by an internationally recognised author who is a leading expert in designing and implementing research approaches to the topic. Within the team of authors, some are experienced senior contributors while others are developing new avenues of exploration on the basis of high-quality doctoral study. This range of

author experience has been deliberately chosen to allow the reader to envisage working in such a team while growing in confidence. This unique reference offers a comprehensive guide to advanced students, academics, practitioners and policy makers on the current state of, and potential developments in, accounting in developing economies globally. This work will be of

particular interest to students and researchers looking to identify topics in emerging economies, academics and practitioners seeking convenient access to an unfamiliar area, and established researchers seeking a single repository on the current state of knowledge, current debates and relevant literature. Proceedings of the Future Technologies Conference (FTC) 2021, Volume 3 Springer Biological Control: Global Impacts, Challenges and Future Directions of Pest Management provides a historical summary of organisms and main strategies used in biological control, as well as the key challenges confronting biological control in the 21st century. Biological control has been implemented for millennia, initially practised by growers moving beneficial species from one local area to another. Today, biological control has evolved into a formal science that provides ecosystem services to protect the environment and the resources used by humanity. With contributions from dedicated scientists and practitioners from around the world, this comprehensiv

e book highlights important successes, failures and challenges in biological control efforts. It advocates that biological control must be viewed as a global endeavour and provides suggestions to move practices forward in a changing world. Biological Control is an invaluable resource for conservation specialists, pest management practitioners and those who research

invasive species, as well as students studying pest management science. OECD Publishing This book highlights current efforts and research into achieving campus sustainability. The book start with Introduction followed by two chapters discusses best governance and practices in enhancing campus sustainability, while subsequent chapters elaborate on green building

and bioenergy. In addition, the book discusses several initiatives regarding campus waste management including sewage recycling potential. *Sustainable Design in Construction, Materials and Processes* Bloomsbury Publishing Brad Peery shows why Chinas rise and the Belt and Road Initiative must be a top concern for the Trump administration . A must read

to understand US-China relations from an American perspective. Dr. Sebastien Goulard, coordinator of OBOReupe Chinas One Belt, One Road Initiative, in which it is investing in about seventy countries, will allow it to develop maritime ports to challenge the supremacy of the United States of America in a way the world has never seen. As a police state with almost ninety million

Communist Party members and a leader for life, China seeks to replace the United States as the strongest country in the world politically, technologically, and militarily. While the United States is at a disadvantage because of changing presidential administrations, it has one strategic advantage: It can spur technological innovation through the private sector.

It also has President Donald Trump, who is challenging China in ways previous administrations did not. Brad Peery, a former U.S. Senate candidate with decades of experience in the investment industry, examines Trumps policies as well as the political, ethical, and economic issues that face companies trying to do business in China. He also explores how

China is developing or supporting emerging technologies such as self-driving and electric vehicles, quantum computing, and artificial intelligence and stealing intellectual property from American companies along the way. *Dilemmas and Challenges in Islamic Finance* International Monetary Fund This book explores the role of institutions in economic growth,

looking in particular at specific Asian countries and at particular cities within those countries. It considers a wide range of factors besides institutions, including the law, cultural factors and overall government arrangements. The differences between the countries studied are highlighted, and the impact of these differences assessed: the impact of English

common law on arrangements in Hong Kong, Singapore and Malaysia; sharia law in Malaysia; the differing lengths of time of colonial rule; the extent to which Chinese family businesses control an economy. Also studied are the degree to which the law is effectively applied, and a range of other social, economic and cultural factors. The book's conclusions as to which factors have

the greatest impact will be of considerable interest to economists of Asia and those interested in economic growth more widely.

Initial Assessment
Asian Development Bank
This book of case studies is designed to provide useful information for instructional purposes and for those interested in the management of Asian agribusiness. This collected volume of

case studies is organized around three major themes- growth, marketing, and upgrading strategies. Many of the cases herein were used in Advanced Agribusiness Workshops jointly organized by the Asian Productivity Organization and Cornell University held in Bangkok, Manila, and Bali. Through a case study-driven approach, this book offers an opportunity for students, policymakers,

and business owners to consider the impact of key trends like value-addition, urbanization, the environment, regional integration, climate change, and technology on Asian agribusinesses .
Proceedings of the 3rd International Symposium of Information and Internet Technology (SYMINTech 2018) World Bank Publications
Over the ten-year Outlook period,

agricultural markets are projected to remain weak, with growth in China weakening and biofuel policies having less impact on markets than in the past.

China and Southeast Asia in the 21st Century

Emerald Group Publishing These proceedings represent the work of researchers participating in the 6th International Conference on Management, Leadership and

Governance (ICMLG 2018) which is being hosted this year by the Institute for Knowledge and Innovation Southeast Asia (IKI-SEA), a Centre of Excellence of at Bangkok University, Thailand on 24-25 May 2018. From Invention to Patent International Renewable Energy Agency (IRENA) Senior managers and Heads of Geological Survey Organizations

(GSOs) from around the world have contributed a collection of papers to provide a benchmark on how GSOs are responding to national and international needs in a rapidly changing world. GSOs continue to provide key scientific information about Earth systems, natural hazards and climate change. As countries adopt sustainable development principles and the public

increasingly turns to social media to find information about resource and environmental issues, the generation and communication of Earth science knowledge become increasingly important. This volume provides a snapshot of how GSOs are adapting their activities to this changing world. The different national perspectives presented converge around several

common themes related to resources, environment and big data. Climate change and the UN's Sustainable Development Goals provide an increased incentive for GSOs of the world to work in harmony, to generate knowledge of Earth systems and to provide solutions for sustainable management of the planet. **Measuring Financial Inclusion and the Fintech Revolution** Oxford

University Press, USA
Monetary Policy, Islamic Finance, and Islamic Corporate Governance: An International overview explores the interrelationships between corporate governance from the perspective of shari'ah, banking industry and monetary policy and is a must-read for students and professionals. **Proceedings of the Conference on Managing Digital Industry,**

IGI Global

The phenomenal growth of Islamic finance in the last few decades has been accompanied by a host of interesting questions and challenges. One of the critical challenges is how Islamic financial institutions can be motivated to participate in

the 'equity-like' profit-and-loss sharing (PLS) contracts. It is observed that Islamic banks are reluctant to participate in the pure PLS scheme which is manifested by the rising concentration of investment on murabaha or mark-up financing. This phenomenon has been the hotbed of academic criticism on the contemporary practice of Islamic banking. This book explains the 'murabaha syndrome' in

light of the incentive provided by the current institutional framework and what are the changes required in the governance structure to mend this anomaly.

The Changing Role of Geological Surveys

Emerald Group Publishing
This book considers crucial changes to Malaysian economic areas and social well-being. The chapters cover diverse

industries such as IT, green technology, retailing, banking, tourism and hospitality, education, logistics, finance, banking, and many others.

Institutions and Economic Growth in Asia

Routledge

This regional market analysis examines the challenges of economic and population growth, the need to boost energy supply, and growing environmental and energy

security concerns.

Multidisciplinary Perspectives on Cross-Border Trade and Business

Routledge

This book comprises seven business and management cases that demonstrate different company issues and managerial problems in ASEAN countries. The book is useful for college and university lecturers, practitioners and students at undergraduate and

postgraduate levels. As a comprehensive understanding of the business environment is essential, college and university lecturers may use this book as class materials in guiding the students to learn the practical issues in the industry. Case questions are developed to provide a preliminary understanding of the issues being discussed. On the other hand, practitioners

may benefit from understanding the problems and challenges faced by different types of companies. It is hoped that this book will provide practical knowledge to its readers. *Renewable energy and jobs - Annual review 2018* Archway Publishing This book examines four aspects of Malaysian consumers' financial vulnerabilities. First, it discusses the issue of over-indebtedness

due to excessive reliance on consumer financing. Second, the book investigates why Malaysians are ill-prepared for their golden years in terms of retirement planning and savings. Third, it delves into the problem of financial fraud victimisation among Malaysian consumers. Fourth, the book analyses the reasons why Malaysians are underinsured despite the

distinct benefits of life insurance. Drawing on secondary data from government agencies such as Bank Negara Malaysia, Employees' Provident Fund, Royal Malaysian Police and the Department of Statistics Malaysia, each chapter presents statistical trends reflecting the four financial vulnerabilities. In-depth analyses of the literature reveal three broad psychological

<p>domains (cognition, motivation, and disposition) and specific psychological factors (e.g. over-confidence, self-control, social norms, and financial literacy) that significantly influence consumers' financial decisions. The four financial vulnerabilities investigated in this book directly address the strategic outcomes of the Malaysian National Strategy for Financial Literacy</p>	<p>2019–2023 (MNSFL), a five-year plan to elevate the financial literacy of Malaysians. Finally, the book presents strategic recommendations that are believed to be useful guidelines for relevant policymakers to promote positive financial behaviours and rational attitudes among consumers. It will be a useful resource for policymakers and researchers interested in</p>	<p>economic psychology and behavioural finance. <u>Halal Development: Trends, Opportunities and Challenges</u> Partridge Publishing Singapore This book gathers the proceedings of a symposium on the role of Internet technologies and how they can transform and improve people's lives. The Internet is essentially a massive database where all types of information</p>
---	---	--

can be shared and transmitted. This can be done passively in the form of non-interactive websites and blogs; or it can be done actively in the form of file sharing and document up- and downloading. Thanks to these technologies, a wealth of information is now available to anyone who can access the Internet. Moreover, Internet technologies are constantly improving:

growing faster, offering more diverse information, and supporting processes that would have been impossible in the past. As a result, they have changed, and will continue to change, the way that the world does business and how people interact in their day-to-day lives. In conclusion, the symposium and these proceedings provide a valuable opportunity for leading

researchers, engineers and professionals around the globe to discuss the latest advances that are helping the world move forward. They also facilitate the exchange of new ideas in the fields of communication technology to create a dialogue between these groups concerning the latest innovations, trends and concerns, practical challenges and potential solutions in the field of

Internet technologies.
