Atoms that let current flow easily are called conductors, whereas atoms that don't let current flow easily are called insulators. An electric circuit is a closed loop made of conductors and other electrical elements through which electric current can flow. For example, a very simple electrical circuit consists of three elements: a battery, a lamp, and an electrical wire that connects the two. Static electricity Electricity for kids - and everyone else: A simple ... A kilowatt-hour, abbreviated kWh, is equivalent to 1,000 watts consumed in one hour. One kilowatt = 1kW = 1000 watts One megawatt = 1MW = 1,000,000 watts. Charges for electricity used in your home are calculated by multiplying the kilowatt- hours used by the rate per kilowatt-hour charged by your electric utility. 101 BASICS SERIES FUNDAMENTALS OF

ELECTRICITY Your home's electricity starts with the power service and electric meter. The utility company's service cables (whether overhead or underground) extend to your house and connect to the utility's electric meter. The meter measures the amount of electricity your home uses and is the basis for the charges on your electric bill. The meter runs only when electricity is used in the house. Introduction to Electricity - YouTube Electricity enters every home by running through a power meter supplied by the local utility company, then, in most cases, through a master 200-amp circuit breaker, and then to the home's breaker box, often still referred to as a fuse box. From the breaker box, this flow of electricity is spread over numerous circuits to different parts of the home by first passing through individual circuit breakers which serve as a safety mechanism to keep the system from being overloaded. Electrical 101 for the Homeowner - Extreme How To In an electrical circuit, the number of electrons in motion is called the amperage or current, and it's measured in amps. The "pressure" pushing the electrons along is called the voltage and is measured in volts. For instance, a generator spinning at 1,000 rotations per minute might produce 1 amp at 6 volts.
