The intervertebral disc is a complex structure that separates opposing vertebrae, permits a wide range of motion, and accommodates high biomechanical forces. Disc degeneration leads to a loss of function and is often associated with excruciating pain. Written by leading scientists and clinicians, the first part of the book provides a review of the basic biology of the disc in health and disease. The second part considers strategies to mitigate the effects of disc degeneration and discusses the possibility of engineering replacement tissues. The final section is devoted to approaches to model normal development and elucidate the pathogenesis of degenerative disc disease using animal, organ and cell culture techniques. The book bridges the gap between the basic and clinical sciences; the target audience includes basic scientists, orthopaedists and neurologists, while at the same time appealing to the needs of graduate students, medical students, interns and fellows.

More than 2.3 million Americans are now age 85 and older, and the population total in this age group is steadily expanding. This book brings together leading researchers to review current knowledge about the demography, health, epidemiology and social status of the oldest old. From discussions of the impact of Alzheimer's disease to an examination of changing social and medical policies, this book provides much needed information about this often neglected but growing group. The special problems attendant to information gathering among the oldest old, such as interviews and research, are also addressed. Special intercultural perspectives inform chapters on "The Black Oldest Old", and "Institutional Long-term Care from an International Perspective". This is essential reading for gerontologists, public health professionals, epidemiologists, and policy makers. The book's broad scope enlarges our understanding of the current needs of the oldest old, and indicates areas of public concern. The National Faculty Directory Lippincott Williams & Wilkins Includes 40 papers covering more than 15 years (1993 to 2009) of research on the biomechanics of neck injuries from the National Highway Traffic Safety Administration's International Technical Conference on the Enhanced Safety of Vehicles (ESV), the Stapp

The definitive history of abortion in the United States, with a new preface that equips readers for what's to come. When Abortion Was a Crime is the must-read book on abortion history. Originally

published ahead of the thirtieth anniversary of Roe v. Wade, this award-winning study was the first to examine the entire period during which abortion was illegal in the United States, beginning in the mid-nineteenth century and ending with that monumental case in 1973. When Abortion Was a Crime is filled with intimate stories and nuanced analysis, demonstrating how abortion was criminalized and policed—and how millions of women sought abortions regardless of the law. With this edition, Leslie J. Reagan provides a new preface that addresses the dangerous and ongoing threats to abortion access across the country, and the precarity of our current moment. While abortions have typically been portrayed as grim "back alley" operations, this deeply researched history confirms that many abortion providers—including physicians—practiced openly and safely, despite prohibitions by the state and the American Medical Association. Women could find cooperative and reliable practitioners; but prosecution, public humiliation, loss of privacy, and inferior medical care were a constant threat. Reagan's analysis of previously untapped sources, including inquest records and trial transcripts, shows the fragility of patient rights and raises provocative questions about the relationship between medicine and law. With the right to abortion increasingly under attack, this book remains the definitive history of abortion in the United States, offering vital lessons for every American concerned with health care, civil liberties, and personal and sexual freedom. How does gentrification affect residents who stay in the neighborhood?

Dissertation Abstracts International Elsevier Health Sciences

The black ghetto is thought of as a place of urban decay and

social disarray. Like the historical ghetto of Venice, it is perceived as a space of confinement, one imposed on black America by whites. It is the home of a marginalized underclass and a sign of the depth of American segregation. Yet while black urban neighborhoods have suffered from institutional racism and economic neglect, they have also been places of refuge and community. In *A Haven and a Hell*, Lance Freeman examines how the ghetto shaped black America and how black America shaped the ghetto. Freeman traces the evolving role of predominantly black neighborhoods in northern cities from the late nineteenth century through the present day. At times, the ghetto promised the freedom to build black social institutions and political power. At others, it suppressed and further stigmatized African Americans. Freeman reveals the forces that caused the ghetto's role as haven or hell to wax and wane, spanning the Great Migration, mid-century opportunities, the eruptions of the sixties, the challenges of the seventies and eighties, and present-day issues of mass incarceration, the subprime crisis, and gentrification. Offering timely planning and policy recommendations based in this history, *A Haven and a Hell* provides a powerful new understanding of urban black communities at a time when the future of many inner-city neighborhoods appears uncertain.

In 2016, a landscape painting of the source of the Lison river in France was discovered at the University of Pennsylvania and was immediately suspected of being the work of Gustave Courbet. A lengthy authentication process began in 2018 and the landscape has since been confirmed as his. This new discovery sparked an

exhibition showcasing the infamous painter's modern landscape practice. Titled *At the Source: A Courbet Landscape Rediscovered*, the exhibition is presented at the University of Pennsylvania's Arthur Ross Gallery from February 4 to May 28, 2023. Focusing on the motifs of grottos and waterfalls in his art of the 1850s and 1860s, it highlights the rediscovered Courbet painting, not shown in public for close to 100 years, and emphasizes the process of authenticating and conserving this historic work. Gustave Courbet (1819-1877) was a French painter who led the Realism movement of the mid nineteenth-century. Committed to painting only what he could see, he rejected academic conventions and the Romanticism of the previous generation of artists. Courbet's paintings of the late 1840s and early 1850s brought him his first recognition. They challenged tradition by depicting unidealized peasants and workers, often on a grand scale previously reserved for paintings of religious or historical subjects. Courbet's subsequent paintings offer a wide range of genres and broadened the political character of his art: landscapes, seascapes, hunting scenes, nudes, and still lifes. This heavily illustrated catalog brings together essays by leading Courbet scholars, including Petra ten-Doesschate Chu, Aruna D'Souza, Paul Galvez, and Mary Morton, and situates Courbet's modern landscapes within the genre of nineteenth-century plein-air painting. Contextualizing the newly discovered work in relation to other visual depictions of the site, the catalog reproduces postcards and maps as well as the few other versions of the Source of the Lison that Courbet painted, including other related subjects. The essays draw connections between Courbet's paintings and his political activism, his interests in geology and environmentalism, and his engagement with issues of gender.
