Modern cooling systems with heat-exchangers work with advanced coolants, but still need old-fashioned maintenance to stay efficient. In the old days, many marine engine cooling systems were of the "raw-water" variety, meaning simply that they relied on pumping whatever water the boat was floating in through the engine and pumping it out the exhaust system—salt water, polluted water, algae-infested water, whatever was available.Inboard Engine Cooling Systems - boats.comThe various cooling liquids which circulate the engine are themselves cooled by sea water. The usual arrangement uses individual coolers for lubricating oil, jacket water, and the piston cooling system, each cooler being circulated by sea water. Some modern ships use what is known as a 'central cooling system' with only one large sea-water-circulated cooler.Fresh water & Sea water Cooling System for Marine Diesel ...Marine Engine Cooling System Sketch Read Online Marine Engine Cooling System Sketch The full closed cooling

system is designed to circulate cooling water through the block and exhaust manifolds.
