There are also sessions on the presentation of archaeological results (graphs and illustrations).The Archaeologist's Laboratory: IntroductionAcademia.edu is a platform for academics to share research papers.Banning - The Archaeologist's Laboratory ~ The analysis of ...Paleoethnobotany Wet Lab (CAS 335A) An extension of the Environmental Archaeology Lab, this wet lab facility is equipped with apparatus to conduct the extraction of starch, phytoliths, and parasites from archaeological plant and soil samples. Adjacent to the lab is a small research office with desk, shelf space, and a microscope for Wet Lab Researchers.Laboratories | ArchaeologyFor every hour spent in the field excavating, archaeologists may spend 3 - 5 hours in the laboratory.

Analysis involves examining each type of artifact to learn as much as possible about the past. There are specialists in ceramics , lithics (stone tools and flakes), fauna (the animal remains), and flora (the plant remains), as well as many more specialized topics. [Lab. - Mississippi Valley Archaeology Center](#) Archaeological Analysis When the last excavated trench is backfilled with dirt and when survey is completed for another season, one is left with only the records, drawings, photographs, and cultural material to make sense of what everything means. [Archaeological Analysis | Archaeological Excavations in Greece](#) Analyze the artifacts. The report must list each artifact recovered from the site. Laboratory analysis includes: studying the artifact types and distribution across the site; dating artifacts using dating methods, such as radiometric and carbon-14 dating, flora and faunal analysis; analyzing pollen samples; and analyzing soil samples. [How to Write an Archaeological Report | Synonym](#) Archaeological Laboratory Methods: An Introduction focuses on common, widely used laboratory techniques that allow students to analyze and report on a variety of archaeological materials. It is intended to provide instructors with an organized format for teaching basic archaeological laboratory methods. [Archaeological Laboratory Methods: An Introduction ...](#) Post-excavation analysis. This article outlines processes for analyzing different artifact classes and describes popular techniques used to analyze each class of artifact. Keep in mind that archaeologists frequently alter or add techniques in the process of analysis as observations can alter original research questions. [Post-excavation analysis - Wikipedia](#) The Environmental Archaeology Lab, directed by Prof. John M. Marston, is devoted to the study of human interactions with past environments, focusing on the analysis of archaeological plant remains from sites worldwide spanning time from the Paleolithic to the recent historical period. [Laboratories | Archaeology - Boston University](#) Archaeologists whose research areas are not near where they live may travel to conduct surveys, excavations, and laboratory analyses. Many archaeologists, however, do not travel that much. This is true for some jobs in federal and state government, museums, parks and historic sites. [Archaeology as a Career - Society for American Archaeology](#) ARF Laboratories. The Archaeological Research Facility maintains six laboratory spaces, including an archaeological chemical laboratory for ecofact extraction and identification; an image laboratory for microfilm, macro and micro material analysis, including a scanning electronic microscope; a computer laboratory for quantitative analyses, GIS studies, and multimedia work; an XRF laboratory ...
