Problem-solving and Decision Making
John Wiley & Sons

Solving complex problems and selling their solutions is critical for personal and organizational success. For most of us, however, it doesn't come naturally and we haven't been taught how to do it well. Research shows a host of pitfalls trips us up when we try: We're quick to believe we understand a situation and jump to a flawed solution. We seek to confirm our hypotheses and ignore conflicting evidence. We view challenges incompletely through the frameworks we know instead of with a fresh pair of eyes. And when we communicate our recommendations, we forget our reasoning isn't obvious to our audience.

How can we do it better? In *Cracked It!*, seasoned strategy professors and consultants Bernard Garrette, Corey Phelps and Olivier Sibony present a rigorous and practical four-step approach to overcome these pitfalls. Building on tried-and-tested (but rarely revealed) methods of top strategy consultants, research in cognitive psychology, and the latest advances in design thinking, they provide a step-by-step process and toolkit that will help readers tackle any challenging business problem. Using compelling stories and detailed case examples, the authors guide readers through each step in the process: from how to state, structure and then solve problems to how to sell the solutions. Written in an engaging style by a trio of experts with decades of

experience researching, teaching and consulting on complex business problems, this book will be an indispensable manual for anyone interested in creating value by helping their organizations crack the problems that matter most.

Problem Solving and Decision Making + Professionalism, 2nd Ed. + Written Communication - Cengage Learning
A System at Risk is a comprehensive analysis of the transportation dilemma in the United States that continues to affect the economic competitiveness and quality of life in America. Written for the layman and the professional alike, it describes an impending crisis in the surface transportation system, which is the foundation of economic vitality. Dr. Harold Worrall exposes the underlying relationship between transportation and

economics by reviewing public economic theory and choice. Incremental policy making has done little to reduce automobile and truck traffic growth. Further, an analysis of traffic congestion demonstrates a geometric growth pattern for congestion even as traffic grows linearly. Dr. Worrall reviews the European Union and China for the manner in which they have addressed similar challenges. These competing economies are shown to have a strategy for dealing with surface transportation and are in stark contrast to that of the United States. Transportation funding is shown to be inadequate in volume and method of application as traffic volumes continue to grow. Dr. Worrall shows that there is a demonstrated need for transportation policies that consider a

relationship between the price and consumption of transportation.

on affordable content and evidence of the growth that has occurred in this arena over the last decade. This book provides examples from different types and sizes of institutions and includes

voices from a wide range of contributors including faculty, instructional designers, academic technologists, librarians, bookstore staff, and more.
