The Oxford Handbook of  
Cognitive Linguistics  
presents a comprehensive

overview of the main  
theoretical concepts and  
descriptive/theoretical  
models of cognitive  
linguistics, and covers its  
various subfields -  
theoretical as well as  
applied. The first twenty  
chapters give readers the  
opportunity to acquire a  
thorough knowledge of  
the fundamental analytic  
concepts and descriptive

models of Cognitive  
Linguistics and their  
background. The book  
starts with a set of  
chapters discussing  
different conceptual  
phenomena that are  
recognized as key  
concepts in Cognitive  
Linguistics:  
prototypicality, metaphor,  
metonymy, embodiment,  
perspectivization, mental

spaces, etc. A second set of chapters deals with Cognitive Grammar, Construction Grammar, and Word Grammar, which, each in their own way, bring together the basic concepts into a particular theory of grammar and a specific model for the description of grammatical phenomena. Special attention is given to the interrelation between Cognitive and Construction Grammar. A third set of chapters compares Cognitive Linguistics with other

forms of linguistic research (functional linguistics, autonomous linguistics, and the history of linguistics), thus giving a readers a better grip on the position of Cognitive Linguistics within the landscape of linguistics at large. The remaining chapters apply these basic notions to various more specific linguistic domains, illustrating how Cognitive Linguistics deals with the traditional linguistic subdomains (phonology, morphology, lexicon, syntax, text and discourse), and

demonstrating how it handles linguistic variation and change. Finally they consider its importance in the domain of Applied Linguistics, and look at interdisciplinary links with research fields such as philosophy and psychology. With a well-known cast of contributors from around the world, this reference work will be of interest to researchers and advanced students in (cognitive) linguistics, psychology, cognitive science, and anthropology.  
A Cross-Disciplinary Guide

to the Mental Lexicon John Benjamins Publishing Company

This book offers a comprehensive investigative study of the argument realisation of the concepts of causative purpose, permit, let/allow and transfer in a broad cross-linguistic typologically diverse mix of languages with GIVE, GET, TAKE, PUT, and LET verbs. This volume stands as the first systematic exploration of these verbs and concepts as they occur in complex events and clauses. This book

brings together scholars and researchers from a variety of functionally inspired theoretical backgrounds that have worked on these verbs within one language or from a cross-linguistic perspective. The objective is to understand the linguistic behaviour of the verbs and their inter-relationships within a contemporary cognitive-functional linguistic perspective. The languages represented include Irish, German, Slavic (West Slavic: Polish, Czech, Slovak and Sorbian

and Western South Slavic: Slovenian and Bosnian/Croatian/Serbian), Germanic, Romance, Gan Chinese Yichun dialect, Māori, Bohairic Coptic, Shaowu Chinese, Hebrew, English, Lithuanian, Estonian, the Australian dialects Pitjantjatjara and Yankunytjatjara, Italian, and Persian. Topics discussed include argument structure and the encoding of arguments under causation, permission and transfer verbs, their lexical semantics and event

structure.

The book examines the diachronic change of time perception throughout Anglo-Saxon England, with the conversion as a turning point. It draws evidence from a variety of sources, in particular from a close reading of Bede's historical writings and his treatises on time, from Old English poetry, especially *The Dream of the Rood*, *The Phoenix*, *The Wanderer*, *Beowulf*, *The Ruin*, *Deor*, from the literature of the Alfredian

period, and from the lexical and statistical analysis of Old English time words. It offers insights into the complexity of time in the Anglo-Saxon context, and shows how the change of time can help to understand the conceptual system of the Anglo-Saxons.

In the World Library of Psychologists series, international experts present career-long collections of what they

judge to be their finest pieces - extracts from books, key articles, salient research findings, and their major practical theoretical contributions. Elaine Funnell has played an important role in the study of neuropsychology over the past 25 years. She has been at the forefront of groundbreaking research on individuals suffering with acquired disorders of written and/or spoken language resulting from brain damage. With commentary by Nicola Pitchford and Andrew

Ellis, this volume presents Elaine's most significant contributions in her two main specialist areas: adult neuropsychology of semantic disorders, with a focus on disorders of naming in dementia, and acquired language and literacy disorders in childhood. The publications included in this volume date back to 1988, where Elaine co-authored a major review of theories regarding the representation of meanings in the mind and brain. They then bring us right up-to-date with a

previously unpublished paper from 2010, which has been recently edited by the co-author, Mike Kopelman, for this edition. Through her exceptional work, Elaine has greatly advanced our understanding of the brain processes behind written and spoken language, and this book represents an original and timely contribution to the field. *Acquired Language Disorders in Adulthood and Childhood* will be of great interest to researchers and postgraduate students in

adult and child neuropsychology, specifically for those specialising in semantic and language disorders. *Anglicisms in the German language - in spite of linguistic purism?* John Wiley & Sons  
The Routledge Handbook of Second Language Acquisition brings together fifty leading international figures in the field to produce a state-of-the-art overview of Second Language Acquisition. The Handbook covers a wide range of topics related to

Second Language Acquisition: language in context, linguistic, psycholinguistic, and neurolinguistic theories and perspectives, skill learning, individual differences, L2 learning settings, and language assessment. All chapters introduce the reader to the topic, outline the core issues, then explore the pedagogical application of research in the area and possible future development. The Routledge Handbook of Second Language Acquisition is an essential

resource for all those studying and researching Second Language Acquisition.

Providing a distillation of knowledge in the various disciplines of arts education (dance, drama, music, literature and poetry and visual arts), this essential handbook synthesizes existing research literature, reflects on the past, and contributes to shaping the

future of the respective and integrated disciplines of arts education. While research can at times seem distant from practice, the Handbook aims to maintain connection with the live practice of art and of education, capturing the vibrancy and best thinking in the field of theory and practice. The Handbook is organized into 13 sections, each focusing on a major area or issue in arts education research. *Evidence for a Lexical Entry Complexity Account* Multilingual Matters

*Bilingual Language Acquisition* Partridge Publishing Singapore This book investigates language disorders in children who speak languages other than, or in addition to, English. The chapters in the first section of the volume focus on language

disorders associated with four different syndromes in multilingual populations and contexts. This section discusses language disorders associated with autism spectrum disorders, Down syndrome, fetal alcohol syndrome and Williams syndrome. The chapters in the second section of the book relate to language impairment in children who speak diverse languages, although the issues they address are relevant across languages and cultural contexts. The

book also reviews assessment procedures and intervention approaches for diverse languages, including Bengali, Cantonese, French, Spanish, and Turkish. The volume aims to stimulate thoughtful clinical practice and further research in language disorders in multilingual populations. **Acquired Language Disorders in Adulthood and Childhood** Guilford Publications

 This monograph explores the tense, aspect, mood, and evidentiality of Korean, which has a rich verbal inflectional system, and proposes novel treatments within the framework of compositional semantics. One of the major

contributions is the demonstration that Korean has two types of deictic tense—simple deictic and spatial deictic tense. Spatial deictic tense refers to the notion of the speaker's 'perceptual field' (or deictic range), as well as to temporality, functioning to set up a condition for a systematic evidential distinction. The research in this volume shows that the basic paradigm of evidentiality of Korean derives from the standard TMA system combined with the notion

of space. This volume also shows that perfect and past tense utilize different primitives. The intended readership of this volume extends beyond Koreanists to scholars interested specifically in tense, mood, aspect, and evidentiality as well as in general theories of grammar and semantics-pragmatics.

African Books Collective  
This commemorative volume is the 12th edition in the Nigerian Linguists Festschrift Series devoted to Professor (Mrs.)

Appolonia Uzoaku Okwudishu. The majority of the papers were presented at the 27th Annual Conference of the Linguistic Association of Nigerian (CLAN) which was held at the Benue State University, Makurdi, Nigeria, and the 26th CLAN which was held at the University of Ibadan, Nigeria. The title derives from the theme of the 27th CLAN: Language Endangerment: Globalisation and the Fate of Minority Languages in Nigeria. A large number of the papers address the

major theme of the conference, while the balance address various aspects of Nigerian linguistics, languages, communication, and literature. Fifty-one papers are included, ranging from sociolinguistics through applied linguistics to formal areas of linguistics which include phonology, morphology and syntax of Nigerian languages. Papers on language endangerment and language revitalisation strategies for safeguarding the

vanishing indigenous tongues of Nigeria are the major focus, and the book serves as important reference material in various aspects of language and linguistic studies in Nigeria.

This volume provides a broad overview of current work in aphasia in individuals who speak more than one language. With contributions from many of the leading researchers in the field, the material included, both experimental work and theoretical overviews, should prove useful to both researchers and clinicians. The book should also appeal to a broader audience, including all who have an

interest in the study of language disorders in an increasingly multicultural/multilingual world (e.g. students of speech-language pathology and linguistics). The areas of multilingual aphasia addressed in this collection include assessment and treatment, language phenomena (e.g. code-switching), particular language pairs (including a bidialectal study), and the role of cultural context.

Scientific Multicultural Language Education: From Research into Practice is a collection of essays which will appeal to teachers of modern languages, no matter the level of instruction. The contributions highlight the latest developments of Foreign Language Teaching in the Balkan countries. The field of Multicultural Language Education ensures that learners are engaged in the teaching and learning experiences. These experiences will allow

learners to successfully participate in a rapidly changing world where cross-cultural understanding and intercultural communication skills are essential. This book surveys current approaches and methods in foreign language teaching, such as grammar translation, language acquisition, classroom management, communication competence, critical thinking skills and communicative language teaching. It also contains

research studies as well as educational experiences and proposals, presented from different perspectives and backgrounds, all of which are theoretically grounded with a clear and sound rationale. Readers will find a variety of educational projects and research studies situated in specific educational contexts and in particular geographical locations. International Handbook of Research in Arts Education English Grammar for the Utterly Confused

How did the English language change from the Old to the Early Modern period? What effect do linguistic and stylistic choices have on a text? Why is it important to consider linguistic features together in a work? The grammar and vocabulary of the English language changed dramatically between the Old and Early Modern periods. These changes in language usage are explored in *The Language of Early English Literature* by examining the effect of authors' linguistic choices

on the descriptions of characters, events, and situations. Written with today's undergraduate student in mind, this textbook is a highly rewarding guide to the rich history of the English language and literature. *The Language of Early English Literature*: • provides detailed explanations of linguistic features, such as word formation, phrase structure, syntax, and semantics • analyses a wide range of texts from Old English, Middle English and Early Modern

English, and establishes comparisons with works written in other languages • includes an invaluable glossary and an extensive bibliography

The study of genre is scattered across research disciplines. This volume offers an integrative perspective starting from the assumption that genres are cognitive constructs, recognized, maintained and employed

by members of a given  
discourse community. Its  
central questions are:  
What does genre

knowledge consist of?  
How is it organized in  
cognition? How is it

applied in discourse  
production and  
interpretation? How is it  
reflected in language use?
