Verification is increasingly complex, and SystemVerilog is one of the languages that the verification community is turning to. However, no language by itself can guarantee success without proper techniques. Object-oriented programming (OOP), with its focus on managing complexity, is ideally suited to this task. With this handbook—the first to focus on applying OOP to SystemVerilog—we'll show how to manage complexity by using layers of abstraction and base classes. By adapting these techniques, you will write more "reasonable" code, and build efficient and reusable verification components. Both a learning tool and a reference, this handbook contains hundreds of real-world code snippets and three professional verification-system examples. You can copy and paste from these examples, which are all based on an open-source, vendor-neutral framework (with code freely available at www.trusster.com). Learn about OOP techniques such as these: Creating classes—code interfaces, factory functions, reuse Connecting

classes—pointers, inheritance, channels Using "correct by construction"—strong typing, base classes Packaging it up—singletons, static methods, packages

Paul S. Koch, MD, & David M. Dillman, MD have evaluated the major surgical planners available & found them to be drastically different with varying outcomes for each surgeon. They collaborated to put together a system for formulating an individual surgical planner of refractive procedures to compensate for surgeon-specific variables. The K-constant is the surgeon-specific factor designed to generate the best possible outcomes & is derived from an original nomogram planner of your choice, such as Casebeer, Thornton, or Nordan.

'(Un)Making the Monarchy' offers a kaleidoscopic view on the British monarchy - an institution that today seems integral, almost inevitable, to the British political system and the very texture of Britishness/Englishness. The contributions in this volume seek to historicise, contextualise, and politicise such dominant myths of the monarchy. They look at the strategies through which monarchical power has been legitimised and naturalised in the texts and practices of (not only) British culture and at the way in which the monarchy has, in turn, been used to legitimise and naturalise other hegemonic structures in society. They also engage with the forms and practices that have sought to contest and subvert monarchical power. Contributors thus tackle the psychological, performative, and political dimensions of monarchical reign, examine supportive as well as critical, satirical, and anti-monarchist representations in literature, theatre, the media, and deal with some of the monarchy's self-representations through public relations, fashion, and language.

The inspiring, life-changing bestseller by the author of LEADERS EAT LAST and TOGETHER IS BETTER. In 2009, Simon Sinek started a movement to help people become more inspired at work, and in turn inspire their colleagues and customers. Since then, millions have been touched by the power of his ideas, including more than 28 million who've watched his TED Talk based on START WITH WHY -- the third most popular TED video of all time. Sinek starts with a fundamental question: Why are some people and organizations more innovative, more influential, and more profitable than others? Why do some command greater loyalty from customers and employees alike? Even among the successful, why are so few able to repeat their success over and over? People like Martin Luther King Jr., Steve Jobs, and the Wright Brothers had little in common, but they all started with WHY. They realized that people won't truly buy into a product, service, movement, or idea until they understand the WHY behind it. START WITH WHY shows that the leaders who've had the greatest influence in the world all think, act, and communicate the same way -- and it's the opposite of what everyone

else does. Sinek calls this powerful idea The Golden Circle, and it provides a framework upon which organizations can be built, movements can be led, and people can be inspired. And it all starts with WHY.
