In 1981, Plenum Press published a text entitled *The Nature and Treatment of the Stress Response* by Robert Rosenfeld, M. D. , and me. That text attempted to do what no other text from a major publisher had previously attempted, that is, to create a clinically practical guide for the treatment of excessive stress and its arousal-related syndromes—this to be captured between the same covers in combination with a detailed, clinically relevant pedagogy on the neurological and endocrinological foundations of the stress response itself. That volume has enjoyed considerable success having found markets among practicing professionals and clinical students as well. The fields of psychosomatic medicine, health psychology, behavioral medicine, and applied stress research have appreciably expanded their boundaries since the publication of the aforementioned volume. Although remarkably little of the clinical utility of that volume has been eroded with time, it was felt that an updated and more integrative clinical textbook needed to be offered to practicing clinicians and students within clinical rather than simply create a second edition of training programs. Therefore, was made to create a significantly revised the original volume, the decision and expanded volume that would cover many of the same topics as the original volume but would provide a primary emphasis on the treatment of excessive stress and that would employ an integrative phenomenological model to facilitate that end. This present volume entitled *A Clinical Guide to the Treatment of the Human Stress Response* is the result.

This is the fourth Special Issue in *Pharmaceuticals* within the last six years dealing with aspects of radiopharmaceutical sciences. It demonstrates the significant interest and increasing relevance to ameliorate nuclear medicine imaging with PET or SPECT, and also radiotherapeutic procedures. Numerous targets and mechanisms have been identified and have been under investigation over the previous years, covering many fields of medical and clinical research. This development is well illustrated by the articles in the present issue, including 13 original research papers and one review, covering a broad range of actual research topics in the field of radiopharmaceutical sciences.

One important element of FAO's work is building the capacity of food control personnel, including government authorities and food industry personnel carrying out food quality and safety assurance programmes. Such programmes should include specific food risk control procedures such as the Hazard Analysis and Critical Control Point (HACCP) system. FAO has prepared this manual in an effort to harmonize the approach to training in the HACCP system based on the already harmonized texts and guidelines of the Codex Alimentarius Commission. The manual is structured to provide essential information in a standardized, logical and systematic manner while adhering to effective teaching and learning strategies. Also published in English, Russian and Spanish.

The Manchester Triage System (MTS) is the most widely used triage system in the UK, Europe and Australia, with tens of millions of patients being processed through hospital emergency departments. Emergency Triage is the core text for the MTS which utilises a risk averse system of prioritisation for patients in all unscheduled care settings, and as such it is an essential text for all emergency department staff using the MTS, in particular triage nurses themselves. The second edition has been revised throughout and takes in the changes in practice introduced into MTS since the book was first published. These include: Redesigned and expanded flow charts Additional charts for allergy and palpitations New practices - such as the possibility of revascularisation for patients with stroke New discriminators, for example acute neurological deficit and significant respiratory history Redefinition of existing discriminators Also new to this edition is the incorporation of sections on the use of the risk averse system in telephone triage, in settings where 'streaming' takes place and as an early warning score for patients in all unscheduled care settings. The tone of this edition reflects the more up to date, modified approach to triage while retaining the principles of clinical prioritisation, which in the authors' words "remains a central plank of clinical risk management in emergency care". Emergency Triage is an essential handbook for all clinicians involved in unscheduled care settings such as emergency care, walk in centres, minor injury units, primary care out of hours services.

While there is a wealth of published information on addiction medicine, the psychological aspects of alcohol abuse, and behavioral medicine with regard to addiction, virtually none of these resources were written with the primary care provider in mind. *Addressing Unhealthy Alcohol Use in Primary Care* is a resource for primary care clinicians who are confronted by patients with these problems daily, and who wish to successfully address these issues in their practice. It would focus on the literature and science relevant to primary care practice and cover the range of interventions appropriate for this setting. Topics include assessment, brief counseling interventions, pharmacotherapy, referrals to both specialty care and Alcoholics Anonymous (and other self-help programs), psychiatric co-morbidity and other drug use, and other information specific to the needs of the primary care provider.

In the 7 years since the first edition of *Clinical Manual of Geriatric Psychopharmacology* was published, dozens of new drugs have been released, and older medications have been marketed in different formulations. In addition, research on pharmacokinetics, pharmacodynamics and mechanism of action, potential interactions, and other critical topics has proceeded apace, rendering much of the information in existing guides obsolete. This new volume is both comprehensive and completely up to date, offering information unavailable elsewhere. New drugs covered include asenapine, paliperidone, iloperidone, lurasidone, desvenlafaxine, vilazodone, long-

acting trazodone, milnacipran, armodafinil, extended-release valproate, rotigotine transdermal, tetrabenazine, dextromethorphan, long-acting gabapentin, and transdermal buprenorphine. Each chapter has a standardized format, with topics including pharmacokinetics, pharmacodynamics and mechanism of action, drug interactions, clinical use (which addresses choice of drug, alternative formulations/routes, pre-treatment evaluation, dose and dose titration, PRN use, monitoring treatment, drug levels, managing treatment resistance, switching drugs, duration of treatment, discontinuation, and overdose), adverse effects, and treatment of selected syndromes and disorders. Dozens of tables, boxes, and figures organize and present complex material, such as practice guidelines, in a straightforward manner that is easy to understand and apply, and the concise, bulleted text facilitates reading and comprehension in the clinical setting. "Specific Drug Summaries" -- one-page summaries of prescribing information for individual drugs -- provide fast access to critical information in a simple format. Designed for residents, fellows, and all clinicians in psychiatry and medicine who diagnose and treat psychiatric and neuropsychiatric conditions affecting geriatric patients, this clinical reference can be used across all treatment settings (inpatient, outpatient, day hospital, consultation, and nursing home). Meticulously referenced and grounded in the latest research, *Clinical Manual of Geriatric Psychopharmacology, Second Edition*, is the definitive guide to psychotropic use in elderly patients. Clinicians can rely confidently on its up-to-date coverage and authoritative counsel.

This revolutionary, user-friendly textbook not only guides social workers in developing competence in the DSM system of diagnosis, it also assists them in staying attuned during client assessment to social work values and principles: a focus on client strengths, concern for the worth and dignity of individuals, appreciation of environmental influences on behavior, and commitment to evidence-informed practice. The authors, seasoned practitioner-scholars, provide an in-depth exploration of fourteen major mental disorders that social workers commonly see in practice, including anxiety disorders, depression, bipolar disorder, and schizophrenia. They skillfully integrate several perspectives in order to help practitioners meet the challenges they will face in client assessment. A risk and resilience framework helps social workers understand environmental influences on the emergence of mental disorders and the strengths that clients already possess. Social workers will also learn to apply critical thinking to the DSM when it is inconsistent with social work values and principles. Finally, the authors catalog the latest evidence-based assessment instruments and treatments for each disorder so that social workers can intervene efficiently and effectively, using the best resources available. Students and practitioners alike will appreciate the wealth of case examples, evidence-based assessment instruments, treatment plans, and new social diversity sections that make this an essential guide to the assessment and diagnostic processes in social work practice.
