Landing Gear - Drop Test - YouTube
The Landing gear drop test is a dynamic test of simulating aircraft landing impact. The situation of landing gear is obtained by measuring various parameters such as displacement, load, acceleration, force and strain. The more parameters are measured, the more clearly it simulates the situation at landing. Experimental Research on Aircraft Landing Gear Drop Test ...Abstract: The structure of a shock absorber based on magnetorheological (MR) damper with a metering pin is proposed, and structure of the magnetic circuit of MR damper is optimized. By drop tests, the damping

characteristics of the shock absorber and damping effect are tested. The experimental results show that the shock absorber has the characteristic of a wide damping force adjustment range and lower energy dissipation. Design and Drop Test of Aircraft Landing Gear's Shock ...aircraft-landing-gear-drop-test-simulation-and-design-evolution 3/6 Downloaded from calendar.pridesource.com on November 11, 2020 by guest performed in August through October 1977. W. Loud Test Procedure 1S10LTP-4.MAIN LANDING GEAR DROP TEST REPORTSec. 23.725 — Limit drop tests. h (inches)= $3.6 (W/S) 1/2$. However, the free drop height may not be less than 9.2 inches and need not be more than 18.7 inches. (b) If the effect of wing lift is provided for in free drop tests, the landing gear must be dropped with an effective weight equal to.Federal Aviation

Regulation Sec. 23.725 - Limit drop tests. Enjoy the videos and music you love, upload original content, and share it all with friends, family, and the world on YouTube. 777-200 hangar landing gear test - YouTube So, the full definition of a drop test is: "From a given height of drop the peak airframe G load shall not exceed the test limit and there shall be no permanent damage to the landing gear or airframe." I believe the FAA standard drop height is 48" and I think the peak G limit is about 4 G; but, I'm not entirely sure about these numbers.
