Please note: This is a companion version & not the original book. Sample Book Insights: #1 There is a hidden curriculum when it comes to doing economics. Most graduate programs do not systematically train their students in what it means to work as a research economist, even when

they teach them some of the interstitial knowledge. #2 The primary means by which a researcher communicates her findings is by writing them up in the form of papers. I cover how to write papers in chapter 2. Once a researcher has written a paper, she will often seek to improve it by incorporating other researchers' comments on her work. #3 The economics profession is full of opportunities for professional service. However, in order to figure out how to get to do a specific kind

of service, the average early-career researcher would be at a loss.

More than 100 resumes and cover letters written by the world's oldest resume-writing company. Resumes shown helped real people not only change jobs, but also transfer their skills and experience to other industries and fields. An indispensable tool in an era of downsizing when research shows that most of us have not one but three distinctly different careers in our working lifetime. "If you are looking for an all-purpose book on resume preparation, this is the best one on the market. Based on my 30 years of helping job hunters, I have learned that half the people embarking on a job hunt aren't really sure what they want to do next. This book shows how to present your experience in an all-purpose way so that you will have broad appeal to a wide variety of industries and fields."—Anne McKinney, EditorPraise for this book and other books in the Real-Resumes Series:"The superior, readable samples, customized to professionals, college graduates, and career changers, distinguish this work from others. Essential for library collections."—LIBRARY JOURNAL"For anyone hoping to enter or change fields in the job market and

wondering how best to compose a resume or cover letter, this thoughtful resource should come as a welcome and valuable tool. Editor Anne McKinney has an MBA from Harvard Business School and over 30 years of directing a professional writing and career consulting team that has helped people advance in their fields, change careers, or secure a first job after college graduation. Here she has compiled more than 100 examples of resumes and cover letters that address every conceivable occupational and employment field, with a separate section for career changers. It begins with a blueprint for planning an effective job campaign that covers how to use your resume and cover letter and researching companies to preparing for an interview and negotiating salary. The next section features resumes and cover letters that experienced professionals used to land jobs from accounting to transportation. Examples from students and college graduates, and people changing careers round out the guide. -- SMALL PRESS MAGAZINE"These excellent new guides don't just provide the usual coverage on how to write a resume. They provide industry-specific examples,

industry-specific tips and cautions, and industry-specific strategies based on real-world resumes. Since many technical types aren't writers, this comes as a special gift; select a winning format, plug in your background specs, and away you go. It's that easy--with Real-Resumes in hand."-- THE MIDWEST BOOK REVIEW"Those picking up this book will be looking for specific references. Most likely they will find what they're looking for. The first section, in particular, is written in clear, practical terms, and even if you're a seasoned executive, there is good information to be reviewed. For those in the personnel industry, a perusal of this book may have great application to daily job execution." -INDEPENDENT PUBLISHER"Distinguished by its highly readable samples." -LIBRARY JOURNAL"Part of an excellent real-resumes series." -THE BOOK READER"This thoughtful resource should come as a welcome and valuable tool." -SMALL PRESS"Testimonials from people who have used the Real-Resumes Series:"I am not a writer, and I was terrified at the thought of writing my own resume. The Real-Resumes Series boosted my confidence

and gave me the ability to write a great resume and cover letter." --Jorge N. "After spending some years in private industry, I wanted to get a federal job. The Real-Resumes samples showed me how to create a federal resume and KSAs for federal employment." --Kaely M.

This book examines the much-debated question of how to unleash the potential of young people with promising intellectual abilities and motivation. It looks at the increasingly important topic of excellence in education, and the shift in focus towards the provision of programs to support talented students in higher education. It provides a systematic overview of programs for talented students at northern European higher education institutions (HEIs). Starting in the Netherlands, where nearly all HEIs have developed honors programs over the past two decades, the book explores three clusters of countries: the Benelux, the Nordic and the German-speaking countries. For each of these countries, it discusses the local culture towards excellence, the structure of the education system, and the presence of honors

programs. In total, the book reviews the special talent provisions for nearly four million students at 303 higher education institutions in eleven countries. In addition, it offers an analysis of the reasons to develop such programs, a look into the future of honors education and a practical list of suggestions for further research. The Sirius Program assigned Marca Wolfensberger to carry out this research.

Talent Development in European Higher Education The Princeton Review

Business and management education has an important impact on business practice throughout the world. To a very large extent, possession of the MBA degree is a passport into the upper reaches of management, and CEOs of many major corporations have earned an MBA. It is a reasonable inference that the education received by these leaders and managers during their MBA experience has an important impact on the way that businesses throughout the world are led

and managed and that major corporate decisions are made. The heart of the MBA education is the curriculum, and curriculum design is perhaps the most important strategic function for a business school faculty to undertake. In order to understand the many issues concerning this contemporary curriculum review, this book examines three related contextual domains. First, it details the long-term growth of business and management education. Second, it examines the major theoretical and empirical literatures on organizational evolution and decision making, paying special attention to decision making in institutions of higher education. Finally, the book describes the previous major curriculum review at Columbia Business School in the late 1950s and the subsequent changes that formed the curriculum that was changed in 1992. This book demonstrates what can be achieved by an institution that sets high standards for its business education, and assists faculty and administrators in other schools of business and management as they contemplate revision of their curricula. In addition, it provides a prime example of curriculum design effort

in one of the leading institutions worldwide. Finally, it will be of interest to scholars in several different fields, notably, higher education curriculum review, organizational decision making and long-run organizational evolution.

An incisive guide that helps up-and-coming economists become successful scholars The Economist's Craft introduces graduate students and rising scholars to the essentials of research, writing, and other critical skills for a successful career in economics. Michael Weisbach enables you to become more effective at communicating your ideas, emphasizing the importance of choosing topics that will have a lasting impact. He explains how to write clearly and compellingly, present and publish your findings, navigate the job market, and more. Walking readers through each stage of a research project, Weisbach demonstrates how to develop research around a theme so that the value from a body of work is more than the sum of its individual papers. He discusses how to structure each section of an academic article and describes the steps that follow the completion of an initial draft, from

presenting and revising to circulating and eventually publishing. Weisbach reveals how to get the most out of graduate school, how the journal review process works, how universities decide promotions and tenure, and how to manage your career and continue to seek out rewarding new opportunities. A how-to guide for the aspiring economist, The Economist's Craft covers a host of important issues rarely taught in the graduate classroom, providing readers with the tools and insights they need to succeed as professional scholars.

In this book, first published in 1998, world-renowned experts on the subject of contemporary librarianship analyse the problems associated with coping with an ever-expanding knowledge base, given their current economic constraints and budgets. It examines challenging marketplace solutions to problems in the economics of information; economic modelling of investments in information resources at academic institutions; the economics of resource sharing, consortia, and document delivery; and measuring

the costs and benefits of distance learning.

The study of European integration produced much scholarly debate in the 1950s and '60s. The following two decades saw few works on European integration that included more elaborate discussions of theory and methodology; most studies in that period were fairly descriptive. In recent years there has been renewed theoretical interest in European integration. This book, however, is one of the first to discuss and apply various political-economy approaches explicitly to integration, including classical integration theory and modern public choice theories. Areas covered include common policies and decision making, as well as the external relations of the EU. The influence of the European Parliament, the concept of subsidiarity, trade policy, Economic and Monetary Union, reform of the Common

Agricultural Policy, relations with EFTA and Eastern European countries, as well as enlargement, are all discussed. "Audience: " Of interest to both scholars and policy makers concerned with these issues.

The definitive career guide for grad students, adjuncts, post-docs and anyone else eager to get tenure or turn their Ph.D. into their ideal job Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that

sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site The Professor is In, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including: -When, where, and what to publish -Writing a foolproof grant application -Cultivating references and crafting the perfect CV -Acing the job talk and campus interview -Avoiding the adjunct trap -Making the leap to nonacademic work, when the time is right The Professor Is In addresses all of these issues, and many more.

A guide for research economists: how to write papers, give talks, navigate the peer-review process, advise students, and more. Newly minted research economists are equipped with a PhD's worth of technical and scientific expertise but often lack some of the practical tools necessary for "doing economics." With this book, economics professor Marc Bellemare breaks down the components of doing research economics and examines each in turn: communicating your research findings in a paper; presenting your findings to other researchers by giving a talk; submitting your paper to a peer-

reviewed journal; funding your research program through grants (necessary more often than not for all social scientists); knowing what kind of professional service opportunities to pursue; and advising PhD, master's, and undergraduate students. With increasing data availability and decreasing computational costs, economics has taken an empirical turn in recent decades. Academic economics is no longer the domain only of the theoretical; many young economists choose applied fields when the time comes to specialize. Yet there is no manual for surviving and thriving as a professional research economist. *Doing Economics* fills that gap, offering an essential guide for research economists at any stage of their careers. *Research in Education* OECD Publishing Get the interview with professional correspondence!
