PRACTICING  
TEXAS  
POLITICS, 18th  
Edition, gives  
you an  
insider's look  
at how public-  
policy making  
is conducted  
in the Lone  
Star State. It  
includes a  
special focus

on the role of  
a growing  
Latino  
population in  
all aspects of  
Texas  
government,  
actions of the  
87th Regular  
Legislative  
Session,  
effects of the  
2020  
elections, the  
COVID-19  
pandemic, the  
historic  
February 2021  
winter storm,  
and the  
impact of the  
oil and gas  
industry on  
state finances.  
Point/Counter  
point features  
offer opposing  
views of key  
controversial  
issues,  
illustrating  
that there is

rarely a single  
right answer  
to an issue.  
How Do We  
Compare?  
boxes  
spotlight the  
differences  
between  
Texas and  
other states,  
while Students  
in Action  
features  
provide stories  
of students  
making  
meaningful  
impacts in  
their colleges,  
communities  
or the state.

**The Cultural Identity and Education of University Students in Selected East-Central Countries**

SAGE

Publications

"The Biometric

Computing:

Recognition &

Registration"

presents

introduction of

biometrics

along with

detailed

analysis for

identification

and

recognition

methods. This

book forms

the required

platform for

understanding

biometric

computing

and its

implementatio

n for securing

target system.

It also

provides the

comprehensiv

e analysis on

algorithms,

architectures

and

interdisciplinary

connection

of biometric

computing

along with

detailed case-

studies for

newborns and

resolution

spaces. The

strength of

this book is its

unique

approach

starting with

how biometric

computing

works to

research

paradigms

and gradually

moves

towards its

advancement.

This book is

divided into

three parts

that

comprises

basic

fundamentals

and

definitions,

algorithms

and

methodologies

, and futuristic

research and

case studies.

Features: A

clear view to

the

fundamentals

of Biometric

Computing

Identification

and

recognition

approach for

different

human

characteristics

Different

methodologies and algorithms for human identification using biometrics traits such as face, Iris, fingerprint, palm print, voiceprint etc. Interdisciplinary connection of biometric computing with the fields like deep neural network, artificial intelligence, Internet of Biometric Things, low resolution face recognition etc. This book is an edited volume by prominent invited	researchers and practitioners around the globe in the field of biometrics, describes the fundamental and recent advancement in biometric recognition and registration. This book is a perfect research handbook for young practitioners who are intending to carry out their research in the field of Biometric Computing and will be used by industry professionals,	graduate and researcher students in the field of computer science and engineering. <i>The Health of Vietnam</i> Walter de Gruyter GmbH & Co KG A provocative look at how today's trade conflicts are caused by governments promoting the interests of elites at the expense of workers Trade disputes are usually understood as conflicts between countries with competing national interests, but
---	---	--

as Matthew C. Klein and Michael Pettis show in this book, they are often the unexpected result of domestic political choices to serve the interests of the rich at the expense of workers and ordinary retirees. Klein and Pettis trace the origins of today's trade wars to decisions made by politicians and business leaders in China, Europe, and the United States over the past thirty

years. Across the world, the rich have prospered while workers can no longer afford to buy what they produce, have lost their jobs, or have been forced into higher levels of debt. In this thought-provoking challenge to mainstream views, the authors provide a cohesive narrative that shows how the class wars of rising inequality are a threat to the global economy and international peace—and

what we can do about it.  
*Lone Star Politics*  
 Springer  
 In Texas, myth often clashes with the reality of everyday government. Explore the state's rich political tradition with *Lone Star Politics* as the author team explains who gets what and how. Utilizing a comparative approach, the authors set Texas in context with other states' constitutions, policymaking, electoral practices, and institutions as

they delve into the evolution of its politics. Critical thinking questions and unvarnished "Winners and Losers" discussions guide students toward understanding Texas government and assessing the state's political landscape. The highly anticipated Seventh Edition includes coverage of the state's response to the COVID pandemic, brand new	chapter-level learning objectives, updated demographic and immigration statistics, and new Discussion Starter questions to help in-class discussion on critical policy debates. This title is accompanied by a complete teaching and learning package. Contact your SAGE representative to request a demo. Digital Option / Courseware SAGE Vantage is an intuitive digital	platform that delivers this text's content and course materials in a learning experience that offers auto-graded assignments and interactive multimedia tools, all carefully designed to ignite student engagement and drive critical thinking. Built with you and your students in mind, it offers simple course set-up and enables students to better prepare for class. Assignable Video with

<p>Assessment Assignable video (available with SAGE Vantage) is tied to learning objectives and curated exclusively for this text to bring concepts to life. Watch a sample video now. LMS Cartridge: Import this title's instructor resources into your school's learning management system (LMS) and save time. Don't use an LMS? You can still access all of the same online resources for</p>	<p>this title via the password-protected Instructor Resource Site. CQ Press Lecture Spark: Designed to save you time and ignite student engagement, these free weekly lecture launchers focus on current event topics tied to key concepts in American Government. Access this week's topic. <i>Computational Algorithm for AI Technology, Proceedings of ICAIECES 2020</i> Princeton University Press Advances in</p>	<p>Additive Manufacturing and Joining Proceedings of AIMTDR 2018 Springer Nature <b>Factfulness</b> Flatiron Books This volume presents research papers on micro and nano manufacturing and surface engineering which were presented during the 7th International and 28th All India Manufacturing Technology, Design and Research conference 2018 (AIMTDR 2018). The</p>
---	--	---

papers discuss the latest advances in miniature manufacturing, the machining of miniature components and features as well as improvement of surface properties. This volume will be of interest to academicians, researchers, and practicing engineers alike.

**The Biometric Computing**

Springer Network infrastructures are growing rapidly to meet the needs of

business, but the required repolicing and reconfiguration provide challenges that need to be addressed. The software-defined network (SDN) is the future generation of Internet technology that can help meet these challenges of network management. This book includes quantitative research, case studies, conceptual papers, model papers, review papers, and theoretical backing on SDN. This

book investigates areas where SDN can help other emerging technologies deliver more efficient services, such as IoT, industrial IoT, NFV, big data, blockchain, cloud computing, and edge computing. The book demonstrates the many benefits of SDNs, such as reduced costs, ease of deployment and management, better scalability, availability, flexibility and

fine-grained control of traffic, and security. The book demonstrates the many benefits of SDN, such as reduced costs, ease of deployment and management, better scalability, availability, flexibility and fine-grained control of traffic, and security. Chapters in the volume address: Design considerations for security issues and detection methods State-of-the-

art approaches for mitigating DDos attacks using SDN Big data using Apache Hadoop for processing and analyzing large amounts of data Different tools used for attack simulation Network policies and policy management approaches that are widely used in the context of SDN Dynamic flow tables, or static flow table management A new four-tiered architecture

that includes cloud, SDN-controller, and fog computing Architecture for keeping computing resources available near the industrial IoT network through edge computing The impact of SDN as an innovative approach for smart city development More. The book will be a valuable resource for SDN researchers as well as academicians, research scholars, and students in the related areas.

<p><u>On the Possibility of Life in Capitalist Ruins</u> John Wiley &amp; Sons This book gathers selected papers presented at the 6th International Conference on Artificial Intelligence and Evolutionary Computations in Engineering Systems, held at the Anna University, Chennai, India, from 20 to 22 April 2020. It covers advances and recent developments in various</p>	<p>computational intelligence techniques, with an emphasis on the design of communication systems. In addition, it shares valuable insights into advanced computational methodologies such as neural networks, fuzzy systems, evolutionary algorithms, hybrid intelligent systems, uncertain reasoning techniques, and other machine learning methods and their application to</p>	<p>decision-making and problem-solving in mobile and wireless communication networks. <i>From Stupefied Youth to Dangerous Adults</i> Springer Nature The Anthropocene concept draws attention to the various forms of entanglement of social, political, ecological, biological and geological processes at multiple spatial and temporal scales. The</p>
--	--	--

ensuing complexity and ambiguity create manifold challenges to widely established theories, methodologies, epistemologies and ontologies. The contributions to this volume engage with conceptual issues of scale in the Anthropocene with a focus on mediated representation and narrative. They are centered around the themes of scale and time, scale

and the nonhuman and scale and space. The volume presents an interdisciplinary dialogue between sociology, geography, political sciences, history and literary, cultural and media studies. Together, they contribute to current debates on the (re-)imagining of forms of human responsibility that meet the challenges created by humanity entering an age of scalar

complexity. *Engineering Your Future* Bloomsbury Publishing Manufacturing Engineering Education includes original and unpublished chapters that develop the applications of the manufacturing engineering education field. Chapters convey innovative research ideas that have a prodigious significance in the life of academics, engineers, researchers and professionals involved with

manufacturing engineering. Today, the interest in this subject is shown in many prominent global institutes and universities, and the robust momentum of manufacturing has helped the U.S. economy continue to grow throughout 2014. This book covers manufacturing engineering education, with a special emphasis on curriculum development, and didactic aspects. Includes	original and unpublished chapters that develop the applications of the manufacturing engineering education principle Applies manufacturing engineering education to curriculum development Offers research ideas that can be applied to the work of academics, engineers, researchers and professionals <i>Print, Digital and Online</i> Oxford University Press For research	in linguistic anthropology, the successful execution of research projects is a challenging but essential task. Balancing research design with data collection methods, this textbook guides readers through the key issues and principles of the core research methods in linguistic anthropology. Designed for students conducting research projects for the first time, or for
--	---	--

researchers in need of a primer on key methodologies, this book provides clear introductions to key concepts, accessible discussions of theory and practice through illustrative examples, and critical engagement with current debates. Topics covered include creating and refining research questions, planning research projects, ethical considerations

for research, quantitative and qualitative data collection methods, data processing, data analysis, and how to write a successful grant application. Each chapter is illustrated by cases studies which showcase methods in practice, and are supported by activities and exercises, discussion questions, and further reading lists. *Research Methods in Linguistic Anthropology* is an essential

resource for both experienced and novice linguistic anthropologists and is a valuable textbook for research methods courses. *Smart Intelligent Computing and Applications* Springer The proceedings covers advanced and multi-disciplinary research on design of smart computing and informatics. The theme of the book

broadly focuses on various innovation paradigms in system knowledge, intelligence and sustainability that may be applied to provide realistic solution to varied problems in society, environment and industries. The volume publishes quality work pertaining to the scope of the conference which is extended towards deployment of emerging

computational and knowledge transfer approaches, optimizing solutions in varied disciplines of science, technology and healthcare. *Acquired Tastes* IOS Press This edited book summarizes numerous research studies on remote sensing and GIS of natural resource management for the Himalaya region done by Indian Institutions

and Universities over the last decade. It gives an overview of hydrometeorological studies on Himalayan water resources and addresses concerns in the development of water resources in this region, which is dealing with an increased pressure in population, industrialization and economic development. While the source of some of the major rivers of India are

found in the Himalayas, the glaciers and water bodies in the region are continuously shrinking leading to a depletion of water and deterioration of water quality. This is affecting a population of up to 2.5 billion people. The ecosystems have been under threat due to deforestation, loss of biodiversity, expansion of agriculture and settlement, overexploitation of natural

resources, habitat loss and fragmentation, poaching, mining, construction of roads and large dams, and unplanned tourism. Spaceborne remote sensing with its ability to provide synoptic and repetitive coverage has emerged as a powerful tool for assessment and monitoring of the Himalayan resources and phenomena. This work serves as a resource to

students, researchers, scientists, professionals, and policy makers both in India and on a global level. [Ten Reasons We're Wrong About the World--and Why Things Are Better Than You Think](#) Frontiers Media SA A radical new approach to economic policy that addresses the symptoms and causes of inequality in Western society today Fueled by populism and the frustrations of

the disenfranchised, the past few years have witnessed the widespread rejection of the economic and political order that Western countries built up after 1945. Political debates have turned into violent clashes between those who want to “take their country back” and those viewed as defending an elitist, broken, and unpatriotic social contract. There seems

to be an increasing polarization of values. The Economics of Belonging argues that we should step back and take a fresh look at the root causes of our current challenges. In this original, engaging book, Martin Sandbu argues that economics remains at the heart of our widening inequality and it is only by focusing on the right policies that we can address it. He proposes a detailed,

radical plan for creating a just economy where everyone can belong. Sandbu demonstrates that the rising numbers of the left behind are not due to globalization gone too far. Rather, technological change and flawed but avoidable domestic policies have eroded the foundations of an economy in which everyone can participate—and would have done so even with a much less globalized economy.

Sandbu contends that we have to double down on economic openness while pursuing dramatic reforms involving productivity, regional development, support for small- and medium-sized businesses, and increased worker representation . He discusses how a more active macroeconomic policy, education for all, universal basic income, and better taxation of capital could work together

for society's benefit. Offering real answers, not invective, for facing our most serious political issues, *The Economics of Belonging* shows how a better economic system can work for all. *Perils of Plenty* Frontiers Media SA What a rare mushroom can teach us about sustaining life on a fragile planet Matsutake is the most valuable mushroom in the world—and a

weed that grows in human-disturbed forests across the Northern Hemisphere. Anna Lowenhaupt Tsing's account of these sought-after fungi offers insights into areas far beyond just mushrooms and addresses a crucial question: What manages to live in the ruins we have made? *The Mushroom at the End of the World* explores the unexpected corners of matsutake

commerce, where we encounter Japanese gourmets, capitalist traders, Hmong jungle fighters, Finnish nature guides, and more. These companions lead us into fungal ecologies and forest histories to better understand the promise of cohabitation in a time of massive human devastation. The Mushroom at the End of the World delves into the relationship

between capitalist destruction and collaborative survival within multispecies landscapes, the prerequisite for continuing life on earth. **How Rising Inequality Distorts the Global Economy and Threatens International Peace** John Wiley & Sons Unit 1 Covers Mobile Computing, Mobile Computing, wireless Networking, Mobile Computing Applications,

Characteristic s of Mobile computing, Structure of Mobile Computing Application. MAC Protocols, Wireless MAC Issues, Fixed Assignment Schemes, Random Assignment Schemes & Reservation Based Schemes. Unit 2 Covers Overview of Mobile IP, Features of Mobile IP, Key Mechanism in Mobile IP route Optimization, Overview of TCP/IP, Architecture of TCP/IP,

<p>Adaptation of TCP Window, Improvement in TCP Performance. Unit 3 Covers Global System for Mobile Communication (GSM), General Packet Radio Service (GPRS), Universal Mobile Telecommunication System (UMTS). Unit 4 Covers Ad-Hoc Basic Concepts, Characteristics, Applications, Design Issues, Routing, Essential of Traditional Routing Protocols, Popular</p>	<p>Routing Protocols, Vehicular Ad Hoc networks (VANET), MANET Vs VANET &amp; Security. Unit 5 Covers Mobile Device Operating Systems, Special Constraints &amp; Requirements, Commercial Mobile Operating Systems, Software Development Kit: IOS, Android, BlackBerry, Windows Phone, M-Commerce, Structure – Pros &amp; Cons, Mobile Payment System,</p>	<p>Security Issues.  <b>Advances in Cancer Stem Cell Biology</b>  Yale University Press  This volume presents research papers on additive manufacturing (popularly known as 3D printing) and joining which were presented during the 7th International and 28th All India Manufacturing Technology, Design and Research conference 2018 (AIMTDR 2018). The contents of</p>
---	--	--

this volume present the latest technological advancements for improving the efficiency, accuracy and speed of the additive manufacturing process and in fusion and solid-state welding technologies, with a variety of technologies, including fused deposition modelling, poly jet 3D printing, weld deposition based technology, selective laser melting and important welding

technologies being covered. This volume will be of interest to academicians, researchers, and practicing engineers alike.  
**Adventures Between Lower Bounds and Higher Altitudes** MIT Press Writing Feature Articles presents clear and engaging advice for students and young professionals on working as a freelance feature writer. This fifth edition not only covers

producing content for print, but also for digital platforms and online. Mary Hogarth offers comprehensive guidance on every aspect of feature writing, from having the initial idea and conducting market and subject research, to choosing the right target audience and publishing platform and successfully pitching the article. In addition, the book instructs students on developing their own journalistic

style and effectively structuring their feature. Each chapter then concludes with an action plan to help students put what they have read into practice. Topics include: Life as a freelance Building a professional profile Telling a story with images Developing a specialism Interviewing skills Profile and interview articles Working in publicity and advertising A career in magazines

and newspapers Getting published overseas Understanding issues in media law and regulation The book also provides an extensive range of interviews with successful media professionals, including a newspaper editor, a money, health and lifestyle journalist, a copywriter and an award-winning columnist, where they share their own experiences of

working in the industry and offer invaluable tips on best practice. *The Dumbest Generation Grows Up* Springer The purpose of this Research Topic is to share the latest developments in the methods and application of implementation science. Briefly, implementation science is the study of methods to promote the adoption and integration of evidence-based

practices, interventions, and policies into routine health care and public health settings. Implementatio n research plays an important role in identifying barriers to, and enablers of, effective health systems programming and policymaking, and then leveraging that knowledge to implement evidence-	based innovations into effective delivery approaches. <u>The Mushroom at the End of the World</u> Frontiers Media SA What if you saw saw angels fighting on your behalf? Tony is a seasoned reporter who is tasked with interviewing a decorated Army Sargeant Major at a military installation. However, a mysterious	woman, a blood-thrifty and violent terrorist, and a series of unexplainable ocurrences begin to positively change Tony's caloused heart about human interaction and the supernatural. Battlefield Angels is a gripping, suspenceful, and uniquely visceral account of a man's search for humanity in an often inhuman environment.
