Manual of Clinical Problems in Oncology Lippincott Williams & Wilkins

Cancer is a very aggressive disease and currently it has been considered a challenge to oncologists and cancer patients worldwide. Nowadays, several therapeutic strategies had improved toward last decades. Surgery is many times still the best curative treatment, mainly in early stage disease. However, Radiotherapy and chemotherapy acquired a main role in this scenario. Target therapies were introduced for medical oncology practice and are demonstrating a hallmark of a new era in cancer treatment. More recently, immunotherapy has been considered the novel cornerstone in cancer treatment. The 2nd edition of the International Manual of Oncology Practice (iMOP) emerged after the great success of the iMOP

1st edition as a reference for medical oncologists and medical residents in the field. In this edition, several chapters were revised and its addresses from the molecular issues of cancer sciences to the clinical practice in medical oncology. In addition, multiple choice questions and clinical cases were included in the main chapters in order to improve the reader learning. The book focuses systemic treatments in many areas of medical oncology, such as breast cancer, gastrointestinal, thoracic, urological oncology, head and neck tumors, bone tumors, sarcomas and palliative care. The topics herein discussed will provide the readers a step forward in the medical oncology practice understanding and give facilities for help in cancer patient treatments.

Over the past ten years there has been a dramatic increase in new nursing roles and nurse-led clinics within oncology. This unique handbook is a comprehensive companion for nurses studying and practising at an advanced level in this emerging field. This text outlines and discusses roles, responsibilities and skills related to advanced practice in oncology nursing – including leadership, communication skills and prescribing – linking throughout to the implications for clinical practice. It then provides a step-by-step guide to setting up and developing nurse-led clinics, looking in more detail at clinics focusing on surgery, chemotherapy, radiotherapy, clinical trials and follow ups, and providing an in-depth case example of a clinic set up for adjuvant Herceptin use. Practical, relevant and underpinned by current legislation, *Advanced Nursing Practice and Nurse-led Clinics in Oncology* is an invaluable resource for oncology nurses.

The Washington Manual of Oncology CRC Press

"Advances in technology, research, and evidence-based practice have led to improvements in the care of patients receiving radiation therapy. The knowledge and expertise required by nurses must focus on the needs of patients who come into their care at any point across the trajectory of the cancer journey. Nurses may work with patients at varying stages of the radiation therapy process and in a wide range of settings. Regardless, however, the need to be knowledgeable about the symptoms and side effects associated with this treatment is essential for nurses caring for this patient population. The Oncology Nursing Society has published the fifth edition of *Manual for Radiation Oncology Nursing Practice and Education* to support nurses who care for patients who will receive, are receiving, or have received radiation therapy. The fifth edition features significant updates and changes to the content to reflect advances in technology, treatment options, and symptom management. New sections have been added based on input from radiation oncology nurses or as a result of changes in treatment options, the needs of specific patient populations, and observations from clinical practice. New topics include patients with cognitive changes and dementia; general distress and coping; patients with mental illness; special populations, such as women who are pregnant, adolescents, and young adults; special needs related to late effects of treatment and cardiac toxicities; and treatment modalities, including cobalt therapy and immunotherapy. This manual serves as an essential resource for individual nurses new to working in a radiation therapy setting as well as to nurses wanting to advance their knowledge in radiation biology and protection, diverse radiation therapy modalities, combination treatments, site- or disease-specific concerns, symptom management, special populations, and care during transition points. Additionally, this manual can be a resource to advanced practice clinicians, educators, and administrators, with a focus on support for nursing staff seeking the education and skills required to care for patients receiving radiation therapy and their families"--

While our knowledge about cancer is proliferating rapidly, our principles of cancer medicine for individual patients and for populations are evolving only gradually. Our fundamental understanding of cancer causes and development is incomplete, and our treatments are nonspecific and less often curative than we would like. Nevertheless, worldwide, our major challenge remains to apply to our populations all that we know about cancer. To meet this challenge, doctors everywhere need a broad view and understanding of cancer causes and control. This book is intended for doctors-in-training and clinical medical practitioners; it provides principles across the breadth of cancer medicine. The editors and authors believe that it is possible to reduce the exposition of current knowledge to the compact 40 chapters and 600 pages presented here without losing the comprehensiveness, richness, and pragmatic detail that doctors need. This compilation presumes knowledge of the basic sciences, particularly genetics, pathology, anatomy, and physiology. We have tried to balance scientific exposition with practical material in prevention, early detection, and palliative care, which are the major areas of public health medicine where greater attention is needed worldwide. While this book is based, in part, on material prepared for previous editions, each chapter has been newly written and edited by the authors and editorial staff for this edition.
