Skousen introduces students to basic accounting concepts, excites them by using lots of real world examples (both U.S. and international), provides some basic accounting knowledge, and then shows how accounting is used and analyzed in actual case situations. Designed for the first introductory course taught at two- and four-year schools that prefer equal coverage of financial and managerial topics, this book does not take an encyclopedic approach to every possible nuance of financial statement preparation or alternative way to perform accounting functions.

This new edition of bestselling textbook *Introducing Property Valuation* provides students with a comprehensive introduction to the concepts and methods of valuing real estate, helping them to progress successfully from basic principles to a more sophisticated understanding. Taking a practically oriented rather than purely theoretical approach, the textbook equips readers with the skills to undertake their own valuation calculations. Fully updated to reflect recent developments in regulation and practice, experienced tutor and valuer Michael Blackledge demonstrates how the principles can be applied in professional practice in line with the requirements and guidance provided by the International Valuation Standards Council and the Royal Institution of Chartered Surveyors. Online material accompanies the new edition with Q&As and pre-programmed excel spreadsheets enabling students to prepare their own calculations. The five traditional methods of valuation are outlined and the practical applications of the two main approaches, the comparison and investment methods, are fully explored. The use of discounted cash flow and quarterly in advance calculations, topics which are not always adequately covered elsewhere, are also explained. Accessibly written with a full range of worked examples, case studies, clear chapter summaries and extensive further reading suggestions, this book is essential for any student of real estate and its valuation.

Accounting: Building Business Skills 4th edition continues to provide students and academics with a well written and accessible textbook, with ample illustrations and applications to business, for a first course in accounting. The text is unique in the way it balances a "user" and "preparer" perspective and integrates real financial information to illustrate business decision choices and how decisions are made using accounting information. The pedagogical approach presented in the text has been tried and tested over many years, and provides a constructive framework for students to learn fundamental accounting concepts and processes. Through the use of real company information and financial statements students will quickly appreciate the use of accounting information. The textbook clearly outlines to students how to account for typical business transactions and prepare financial statements - such as a balance sheet, income statement, and statement of cash flows - that communicate the financing, operating, and investing activities of a business. Whether a student is required to study one accounting subject, as part of a wider business degree, or undertake a major study of accounting the text builds a strong conceptual understanding of accounting and will develop skills that can be applied to an accounting and business environment. The integral role of financial statements for decision making is also emphasised in this text and is reinforced throughout

by the Decision Toolkit in each chapter. Students are provided with an extensive set of tools necessary to make business decisions based on financial information. The fourth edition is designed to engage and educate students.
