Elvis Day by Day Manchester University Press

A nostalgic chronicle of a movie lover's misspent youth in a dark, run-down second run theater, once the proud centerpiece of the small suburban town of Milwaukie, Oregon. Cinema 69 is both an autobiography and an affectionate history of the theater & films which played there that had a lasting impact one viewer's life. This book is a must for any movie fan who grew up in the dark balconies of their neighborhood second run cinemas during the 70s and 80s, before home video began running them out of business.

Whether it's dogs, spiders, blood, heights or some other fear, specific phobias are one of the most prevalent mental health problems, affecting as many as one in eight people. In recent years, cognitive-behavioral therapy (CBT) has emerged as particularly effective in treating young people and adults with specific phobias. And of these methods, one-session treatment stands out as a long-lasting, cost-effective intervention of choice. Intensive One-Session Treatment of Specific Phobias not only provides a summary of the evidence base, it also serves as a practical reference and

training guide. This concise volume examines the phenomenology, epidemiology, and etiology of phobias, laying the groundwork for subsequent discussion of assessment strategies, empirically sound one-session treatment methods, and special topics. In addition, expert contributors address challenges common to exposure therapy, offer age-appropriate guidelines for treating young clients, and describe innovative computer-assisted techniques. Organized to be read individually or in sequence, chapters delve into key areas, including: Evidence-based assessment and treatment of specific phobias in children, adolescents, and adults. One-session treatment theory and practice with children, adolescents, and adults. Handling difficult cases of specific phobias in youth. Interventions for specific phobias in special populations. Training

and assessing therapists in one-session treatment. Ethical issues in considering exposure. *Intensive One-Session Treatment of Specific Phobias* is an essential resource for researchers, clinicians, and graduate students in child, school, clinical, and counseling psychology; social work; and general and special education.

The official prequel novel leads into the summer blockbuster *The Predator*, Shane Black's new movie set within the universe of the previous films. With a screenplay by Shane Black and Fred Dekker, the film stars Yvonne Strahovski, Boyd Holbrook, Olivia Munn, Alfie Allen, Thomas Jane, Sterling Brown, Keegan-Michael Key, Edward James Olmos, Jake Busey, and more. Author James A. Moore (*Alien: Sea of Sorrows*) will work closely with Christopher Golden, author for the official novelization. The prequel novel will introduce key concepts that then will explode onto the screen in the movie itself. *The Predator*, *Alien*, and *Aliens* TM & © 2017 Twentieth Century Fox Film Corporation. Focusing on the most rapidly changing areas of mechatronics, this book discusses signals and system control, mechatronic products, metrology and nanometrology, automatic control & robotics, biomedical engineering, photonics, design manufacturing and testing of MEMS. It is reflected in the list of contributors, including an international group of 302 leading researchers representing 12 countries. The book is intended for use in academic, government and industry R&D departments, as an indispensable reference tool for the years to come. This volume can serve a global community as the definitive reference source in Mechatronics. The book comprises carefully selected 93 contributions presented at the 11th International Conference Mechatronics 2015, organized by Faculty of Mechatronics, Warsaw University of Technology, on September 21-23, in Warsaw, Poland.

In her pioneering book *Platform Leadership* (with Michael Cusumano), Gawer gave us the strategy of building

coalitions of customers, suppliers, and complementors. Now, she brings together a number of the leading researchers in the area of platform strategy to give us a book that will be a key reference for both practitioners and academics. Adam Brandenburger, New York University, US Annabelle Gawer's collected volume of research shows that a vibrant community of scholars has arisen around platforms and innovation. Each of the chapters is first rate, with top researchers offering some of their latest work. This will be an indispensable book for students of innovation and technology management everywhere. Henry Chesbrough, University of California, Berkeley, US Annabelle Gawer's *Platforms, Markets and Innovation* is the first serious exploration of the critical but subtle role that platforms play in business, society and our personal lives. As digital technologies penetrate every nook and cranny of the world around us, we rely on platforms to both help us use the new technologies, as well as to organize new markets of innovation that add applications on top of the platforms and make them far more valuable. Dr Gawer's excellent book is designed to help us understand the mysterious nature of platforms. It brings together the insights of twenty-four experts around the world who contributed to the fourteen chapters of the book. Dr Gawer's book is invaluable to anyone trying to understand the nuanced nature of platforms, and their implications for the evolution of innovation in the 21st century. Irving Wladawsky-Berger, IBM Academy of Technology, US The emergence of platforms is a novel phenomenon impacting most industries, from products to services. Industry platforms such as Microsoft Windows or Google, embedded within industrial ecosystems, have redesigned our industrial landscapes, upset the balance of power between firms, fostered innovation and raised new questions on competition and innovation. Annabelle Gawer presents cutting-edge contributions from 24 top international scholars from 19 universities across Europe, the USA and Asia, from the disciplines of strategy, economics, innovation, organization studies and knowledge management. The novel insights assembled in this volume constitute a fundamental step towards an empirically based, nuanced understanding of the nature of platforms and the implications they hold for the evolution of industrial innovation. The book provides an overview of platforms and discusses governance, management, design and knowledge issues. With a multidisciplinary approach, this book will strongly appeal to

academics and advanced students in management, innovation, strategy, economics and design. It will also prove an enlightening read for business managers in IT industries.

Book description to come.

*Artificial Intelligence, Robotics and Automation in Space* Pearson Education

This book highlights new advances in biometrics using deep learning toward deeper and wider background, deeming it "Deep Biometrics". The book aims to highlight recent developments in biometrics using semi-supervised and unsupervised methods such as Deep Neural Networks, Deep Stacked Autoencoder, Convolutional Neural Networks, Generative Adversary Networks, and so on. The contributors demonstrate the power of deep learning techniques in the emerging new areas such as privacy and security issues, cancellable biometrics, soft biometrics, smart cities, big biometric data, biometric banking, medical biometrics, healthcare biometrics, and biometric genetics, etc. The goal of this volume is to summarize the recent advances in using Deep Learning in the area of biometric security and privacy toward deeper and wider applications. Highlights the impact of deep learning over the field of biometrics in a wide area; Exploits the deeper and wider background of biometrics, such as privacy versus security, biometric big data, biometric genetics, and biometric diagnosis, etc.; Introduces new biometric applications such as biometric banking, internet of things, cloud computing, and medical biometrics.

Competing on Internet time means competitive advantage can be won and lost overnight. In this penetrating analysis of strategy-making and product innovation in the dynamic markets of commercial cyberspace, bestselling *Microsoft Secrets* co-author Michael Cusumano and top competitive strategy expert David Yoffie draw vital lessons from Netscape, the first pure Internet company, and how it has employed the techniques of "judo strategy" in its pitched battle with Microsoft, the world's largest software producer. From on-site observation and more than 50 in-depth interviews at Netscape and other companies, Cusumano and Yoffie construct a blueprint

meticulously detailing how the fastest-growing software company in history has competed on Internet time by moving rapidly to new products and markets, staying flexible, and exploiting leverage that uses the weight of its giant rival Microsoft against it. The main source of Netscape's leverage, they argue, has been its skill in designing products that run on multiple operating systems. Microsoft has responded with judo techniques in kind. Managers in every high-tech industry will discover a wealth of new ideas on how to create and scale-up a new company quickly; how to compete in fast-paced, unpredictable industries; and how to design products for rapidly evolving markets. The lessons that Cusumano and Yoffie derive from Netscape's contest with Microsoft go far beyond start-ups and Internet software. Small companies in any industry and powerful, established firms alike will welcome the principles the authors formulate from this David-and-Goliath-like struggle. Competing on Internet Time is essential and instructive reading for all managers, engineers, and entrepreneurs who want to succeed in ultra-fast-paced markets.

This timely text/reference presents a broad overview of advanced deep learning architectures for learning effective feature representation for perceptual and biometrics-related tasks. The text offers a showcase of cutting-edge research on the use of convolutional neural networks (CNN) in face, iris, fingerprint, and vascular biometric systems, in addition to surveillance systems that use soft biometrics. Issues of biometrics security are also examined. Topics and features: addresses the application of deep learning to enhance the performance of biometrics identification across a wide range of different biometrics modalities; revisits deep learning for face biometrics, offering insights from neuroimaging, and provides comparison with popular CNN-based architectures for face recognition; examines deep learning for state-of-the-art latent fingerprint and finger-vein recognition, as well as iris recognition; discusses deep learning for soft biometrics, including approaches for gesture-based identification, gender classification, and tattoo recognition; investigates deep learning for biometrics

security, covering biometrics template protection methods, and liveness detection to protect against fake biometrics samples; presents contributions from a global selection of pre-eminent experts in the field representing academia, industry and government laboratories. Providing both an accessible introduction to the practical applications of deep learning in biometrics, and a comprehensive coverage of the entire spectrum of biometric modalities, this authoritative volume will be of great interest to all researchers, practitioners and students involved in related areas of computer vision, pattern recognition and machine learning.

The 2018 IEEE 9th International Conference on Biometrics, Theory and Applications and Systems offers a broad scope, including advances in fundamental signal processing, image processing, pattern recognition, and statistical and mathematical techniques relevant to biometrics. Areas of coverage include biometrics based on voice, fingerprint, iris, periocular, face, handwriting, gait and other modalities, as well as multi modal biometrics and new biometrics based on novel sensing technologies. Submissions will be rigorously reviewed, and should clearly make the case for a documented improvement over existing state of art. Experimental results for contributions in established areas such as voice, face, iris, fingerprint, and gait are encouraged to use the largest and most challenging existing publicly available datasets.

Patent holders are increasingly making voluntary, public commitments to limit the enforcement and other exploitation of

their patents. The best-known form of patent pledge is the so-called FRAND commitment, in which a patent holder commits to license patents to manufacturers of standardized products on terms that are "fair, reasonable and non-discriminatory." Patent pledges have also been appearing in fields well beyond technical standard-setting, including open source software, green technology and the biosciences. This book explores the motivations, legal characteristics and policy goals of these increasingly popular private ordering tools.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved

it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.
