The book describes how limited information, habit, the rules of the game, asymmetric information and ego blend together in potentially toxic ways in market environments, thus creating bubbles, stock runs, and more prosaically, even 'normal' equity prices. In addition, the book discusses the implications of these behaviors in-depth. In so doing, it helps the reader to not only predict the madness within equity markets, but also helps them develop solutions that address and mitigate outcomes. Provides detailed and accurate descriptions of the most relevant behavioral anomalies for finance
