The WPC is dedicated to the application of scientific advances in the oil and gas industries, to technology transfer, and to the use of the world's petroleum resources. The Fifteenth World Petroleum Congress was held between 12-16th October 1997 in Beijing, China. *Twelfth Report of Session 2007-08; Report, Together with Formal Minutes, Oral and Written Evidence* John Wiley & Sons Incorporated
A debate regarding the

securities regulatory structure in Canada, with research about the Canadian Securities Commission (CSC) model in which Parliament would enact the Canadian Securities Act ("Act") based on the uniform securities legislation developed by the Canadian Securities Administrators and endorsed by the provinces.

Proceedings of the Fourteenth World Petroleum Congress

Health Aspects of Plumbing
The topic of this book is known as dynamic scheduling, and is used to refer to three dimensions of project management and scheduling: the

construction of a baseline schedule and the analysis of a project schedule's risk as preparation of the project control phase during project progress. This dynamic scheduling point of view implicitly assumes that the usability of a project's baseline schedule is rather limited and only acts as a point of reference in the project life cycle. Consequently, a project schedule should especially be considered as nothing more than a predictive model that can be used for resource efficiency calculations, time and cost risk analyses, project tracking and performance measurement, and so on. In this book, the three dimensions of dynamic scheduling are highlighted in

detail and are based on and inspired by a combination of academic research studies at Ghent University (www.ugent.be), in-company trainings at Vlerick Business School (www.vlerick.com) and consultancy projects at OR-AS (www.or-as.be). First, the construction of a project baseline schedule is a central theme throughout the various chapters of the book, and is discussed from a complexity point of view with and without the presence of project resources. Second, the creation of an awareness of the weak parts in a baseline schedule is discussed at the end of the two baseline scheduling parts as schedule risk analysis techniques that can be applied on top of the

baseline schedule. Third, the baseline schedule and its risk analyses can be used as guidelines during the project control step where actual deviations can be corrected within the margins of the project's time and cost reserves. The second edition of this book has seen corrections, additions and amendments in detail throughout the book. Moreover Chapter 15 on "Dynamic Scheduling with ProTrack" has been completely rewritten and extended with a section on "ProTrack as a research tool".

Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling

them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine, and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish.

Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature and product innovation, has become the gold standard against which all other outdoor-industry awards are measured.

Molecular Nutrition and Diabetes: A Volume in the Molecular Nutrition Series focuses on diabetes as a

nutritional problem and its important metabolic consequences. Fuel metabolism and dietary supply all influence the outcome of diabetes, but understanding the pathogenesis of the diabetic process is a prelude to better nutritional control. Part One of the book provides general coverage of nutrition and diabetes in terms of dietary patterns, insulin resistance, and the glucose-insulin axis, while Part Two presents the molecular biology of diabetes and focuses on areas such as oxidative stress, mitochondrial function, insulin resistance, high-fat diets, nutraceuticals, and lipid accumulation. Final sections explore the genetic machinery behind diabetes and

diabetic metabolism, including signaling pathways, gene expression, genome-wide association studies, and specific gene expression. While the main focus of each chapter is the basic and clinical research on diabetes as a nutritional problem, all chapters also end with a translational section on the implications for the nutritional control of diabetes. Offers updated information and a perspective on important future developments to different professionals involved in the basic and clinical research on all major nutritional aspects of diabetes mellitus Explores how nutritional factors are involved in the pathogenesis of both type1 and type2 diabetes and their

complications
Investigates the
molecular and genetic
bases of diabetes and
diabetic metabolism
through the lens of a

100 Chemical Myths
deals with popular yet
largely untrue
misconceptions and
misunderstandings
related to chemistry. It
contains lucid and
concise explanations
cut through fallacies
and urban legends that
are universally relevant
to a global audience. A
wide range of chemical
myths are explored in
these areas; food,
medicines,
catastrophes,
chemicals, and
environmental
problems. Connections
to popular culture,
literature, movies, and
cultural history hold
the reader's interest
whilst key concepts are
beautifully annotated
with illustrations to
facilitate the
understanding of

unfamiliar material.
 Chemical Myths
 Demystified is pitched
 to individuals without a
 formal chemistry
 background to

This second decade of
 the millennium finds
 the world changing at
 a once unimaginable
 pace. Businesses,
 tangled in the
 interwoven threads of

galloping globalization, technological advances, cultural diversity, economic recession and deep-rooted human social evolution, struggle to keep up with incessant changes; consequently and inexorably experiencing severe difficulties and disorientation. Executives, much bewildered, habitually turn to conventional, time-honoured strategies and practices, which increasingly fail to offer the much-sought answers and means to survival, competitiveness and growth. We are currently experiencing a business era of turbulence and dynamic change – an era that inherently rejects conventionality and orthodox business

theory to reward businesses embracing agility, reflex-style adaptability, innovation and creativity. This turbulence is, however, not a parenthesis or even a pattern, but the new reality in which each business must reinvent and redefine itself. This is a new reality of stakeholders that shift focus from the external to the internal, from the tangible to the intangible, and from fact to perception. This book presents research and paradigms that transcend classical theory in order to examine how business practice is positively affected by these conditions. Across a multitude of sectors and organisational types, scholars of different business specialisations set the

theoretical foundations of contemporary thinking and present their practical implementations.

With-profits funds offer long-term investment products and are managed by life insurance companies, both proprietary and mutual. Policyholder premiums are held in a pooled fund that is invested in a range of assets, with a significant proportion in equities and property. Inherited estates are defined by the Financial Services

Authority (FSA) as "the part of the with-profits fund over and above what is required to meet the fund's liabilities that the insurer retains as working capital; it will also include any excess surplus in the fund."

Firms will often "smooth" out returns to policyholders in order to cushion policyholders from the extremes of fluctuations in the property and equity markets. The with-profits sector has suffered from conflicts of interest on the part of the management of life funds by proprietary companies, leading to concern among some holders of with-profits policies that their interests have not been adequately protected. All stakeholders in

with-profits funds deserve a framework which provides as much simplicity, certainty and clarity as possible. The Committee is not satisfied that the Financial Services Authority (FSA) has done enough to provide a robust framework within which these conflicts of interest can be managed. The use of inherited estate in smoothing returns to policyholders between good and bad years is clearly appropriate, but more should be done by the industry to improve the transparency of their application of smoothing techniques. The Committee also comments on funding of new business, mis-selling compensation costs, shareholder tax,

phasing of special distribution payouts, and the resources, remit and visibility of With-profits Committees.

Extreme Events in
Geospace: Origins,
Predictability, and
Consequences helps
deepen the
understanding,
description, and
forecasting of the
complex and inter-
related phenomena of

extreme space weather events. Composed of chapters written by representatives from many different institutions and fields of space research, the book offers discussions ranging from definitions and historical knowledge to operational issues and methods of analysis. Given that extremes in ionizing radiation, ionospheric irregularities, and geomagnetically induced currents may have the potential to disrupt our technologies or pose danger to human health, it is increasingly important to synthesize the information available on not only those consequences but also the origins and predictability of such events. Extreme

Events in Geospace: Origins, Predictability, and Consequences is a valuable source for providing the latest research for geophysicists and space weather scientists, as well as industries impacted by space weather events, including GNSS satellites and radio communication, power grids, aviation, and human spaceflight. The list of first/second authors includes M. Hapgood, N. Gopalswamy, K.D. Leka, G. Barnes, Yu. Yermolaev, P. Riley, S. Sharma, G. Lakhina, B. Tsurutani, C. Ngwira, A. Pulkkinen, J. Love, P. Bedrosian, N. Buzulukova, M. Sitnov, W. Denig, M. Panasyuk, R. Hajra, D. Ferguson, S. Lai, L. Narici, K. Tobiska, G. Gapirov, A. Mannucci, T. Fuller-

Rowell, X. Yue, G. Crowley, R. Redmon, V. Airapetian, D. Boteler, M. MacAlester, S. Worman, D. Neudegg, and M. Ishii. Helps to define extremes in space weather and describes existing methods of analysis Discusses current scientific understanding of these events and outlines future challenges Considers the ways in which space weather may affect daily life Demonstrates deep connections between astrophysics, heliophysics, and space weather applications, including a discussion of extreme space weather events from the past Examines national and space policy issues concerning space weather in Australia, Canada, Japan, the

United Kingdom, and the United States *Managing aquifer recharge* John Wiley & Son Limited A key element of any organism's pesticide risk is its natural history, and the routes by which it may be exposed to pesticides in foraging and nesting activities. In this respect, a series of presentations on the natural history of wild bee groups and pesticide exposure were solicited for a session on "Exploring pesticide effects on non-Apis bees" at the X International Symposium on Pollination, convened by the International Commission on Plant-Bee Relations, in Mexico, 27-30 June, 2011. The presentations have been more fully

developed for the present publication, as a contribution to knowledge management of pollination services in sustainable agriculture. A careful look at pollinators, as presented in these chapters, can help to understand how they may live and carry out their vital functions in agroecosystems, and how farmers and land managers may mitigate their impacts on key pollinator groups.

WHO Medical Device Technical Series

UNESCO Publishing
The purpose of this guidance document is for the appropriate selection procurement utilization and maintenance of oxygen concentrators. This document also focuses on recommendations

for the appropriate use and maintenance of oxygen concentrators in an effort to increase the availability management and quality of oxygen concentrators and ultimately to improve health outcomes in LRS. This document is intended to serve as a resource for the planning and provision of local and national oxygen concentrator systems for use by administrators clinicians and technicians who are interested in improving access to oxygen therapy and reducing global mortality associated with hypoxaemia.

Aviation Weather for Pilots and Flight Operations Personnel

The Stationery Office
This publication

describes the processes involved in the design installation and maintenance of modern plumbing systems. It recommends a number of plumbing system design and installation specifications that have demonstrated their validity from years of experience. It also examines the microbiological chemical physical and financial risks associated with plumbing and outlines the major risk management strategies that are used in the plumbing industry and emphasizes the importance of measures to conserve supplies of clean water. This work is dedicated to assisting developing countries in achieving the best

possible plumbing levels to ensure the highest health benefits from use of sound plumbing practices. It is aimed at administrators and plumbers working in areas that are served by a mains drinking-water supply or sewerage system or are about to install a mains drinking- water supply or sewerage system. It should be of particular value to those working in countries or areas that are in the early stages of introducing modern plumbing systems. While it draws attention to the problems of drinking-water supply and waste removal in developing countries and outlines some of the strategies currently used it does not systematically cover

issues specific to
developing countries.
