Bragg gratings, meander lines, clystron resonators, photonic crystals), antennas (e.g. circular and conformal); and enables the reader to solve partial differential equations in other physical areas by using the described principles."--BOOK JACKET.

Optical Absorption of Impurities and Defects in Semiconducting Crystals Cambridge University Press

Materials science includes those parts of chemistry and physics that deal with the properties of materials. It encompasses four classes of materials, the study of each of which may be considered a separate field: metals; ceramics; polymers and composites. Materials science is often referred to as materials science and engineering because it has many applications. Industrial applications of materials science include processing techniques (casting, rolling, welding, ion implantation, crystal growth, thin-film deposition, sintering, glassblowing, etc.), analytical techniques (electron microscopy, x-ray diffraction, calorimetry, nuclear microscopy (HEFIB) etc.), materials design, and cost/benefit tradeoffs in industrial production of materials. This book presents new research directions in a very new field which happens to be an old field as well.

Analysis of Electromagnetic Fields and Waves Springer Science & Business Media

The Advanced Highway Maintenance and Construction Technology (AHMCT) Research Center has been developing robotic equipment and machinery for highway maintenance and construction operations. It is a cooperative venture between the University of California at Davis and the California Department of Transportation (Caltrans). The research and development projects have the goal of increasing safety and efficiency of roadwork operations through the appropriate application of automation solutions. This report describes the continuing development of automated equipment for deploying and retrieving traffic cones. In this latest phase of the project, the center has continued the development of the automated cone machine (ACM) through further testing and development of the first generation integrated prototype ACM and the design and fabrication of an integrated Multi-stack ACM developed to maximize the number of cones carried by the automated cone machine. Included in this report is the development of an improved control system for the retrieval arm which is a critical component used to pick up the traffic cone off the road. A first generation ACM prototype (ACM 1) is being used in tests and demonstrations on the highways of California. Operators using ACM 1 can place and retrieve cones without any set up and control the machine from within the confines of the cab. These machines can easily be run by a single operator and are very compatible with the process of closing a lane. The ACM 1 design was integrated into the existing Caltrans manual cone body truck and was limited to two stacks of 40 cones each. The new ACM multistack is designed to carry six stacks of 50 cones for a total of 300 cones. These machines are unambiguous demonstrations of the successful application of automation in a very demanding environment. This development work and the continued support of commercialization at AHMCT support the Caltrans goal of making these machines available to the maintenance operations.

Nearly twenty years after the collapse of socialism, the countries of post-socialist Eastern Europe have experienced divergent trajectories of political development. This book looks at why this is the case, based on the assumption that societies, or social orders, can be distinguished by the extent to which competitive tendencies contained within them – economic, political, social and cultural – are resolved according to open, rule-based processes. The book explores which economic conditions allow for increased levels of political competition, and it tests the hypothesis that the nature of a

country's ties with the international economy, and the level of competition within a country's economic system, will shape the trajectory of political competition within that society. The book goes on to argue that after several decades of relative 'bloc autarky' during the socialist period, the ongoing process of reintegration with the international economy across the post-socialist region has resulted in distinct patterns of structural economic development, and that that these patterns are of crucial importance in explaining the variation in social order type across the post-socialist region. By offering a more precise analysis of the causal mechanisms that link economic and political competition, the book makes a useful contribution to research on the different patterns of political behaviour that have been observed across the post-socialist region since the collapse of the socialist regimes.

It was foIIId as long ago as 1954 that heating oxygen rich silicon to around 450°C produced electrical active defects - the so called thermal donors. The inference was that the donors were created by some defect produced by the aggregation of oxygen. Since then, there has been an enormous amount of work carried out to elucidate the detailed mechanism by which they, and other defects, are generated. This task has been made all the more relevant as silicon is one of the most important technological materials in everyday use and oxygen is its most common impurity. However, even after forty years, the details of the processes by which the donors and other defects are generated are still obscure. The difficulty of the problem is made more apparent when it is realised that there is only one oxygen atom in about ten thousand silicon atoms and so it is difficult to devise experiments to 'see' what happens during the early stages of oxygen precipitation when complexes of two, three or four oxygen atoms are formed. However, new important new findings have emerged from experiments such as the careful monitoring of the changes in the infra red lattice absorption spectra over long durations, the observation of the growth of new bands which are correlated with electronic infra-red data, and high resolution ENDOR studies. In addition, progress has been made in the improved control of samples containing oxygen, carbon, nitrogen and hydrogen.

In answer to the intense development of new financial products and the increasing complexity of portfolio management theory, Portfolio Optimization and Performance Analysis offers a solid grounding in modern portfolio theory. The book presents both standard and novel results on the axiomatics of the individual choice in an uncertain framework, cont

Numerical Techniques for Microwave and Millimeter-Wave Passive Structures Springer Science & Business Media

A real boon for those studying fluid mechanics at all levels, this work is intended to serve as a comprehensive textbook for scientists and engineers as well as advanced students in thermo-fluid courses. It provides an intensive monograph essential for understanding dynamics of ideal fluid, Newtonian fluid, non-Newtonian fluid and magnetic fluid. These distinct, yet intertwined subjects are addressed in an integrated manner, with numerous exercises and problems throughout.

The Economic Sources of Social Order Development in Post-socialist Eastern Europe Routledge
 Czy to prawda, że nie kupuje się samochodów na „f”? Czy właściciele włoskich aut rzeczywiście nie mówią sobie „dobry wieczór”, bo widzieli się już rano u mechanika? Czy Niemiec naprawę płakał, jak sprzedawał? Sebastian Kraszewski, znany jako Kickster, prowadzi kanał motoryzacyjny na YouTube. Odkąd zaczął przygotowywać odcinki, jego wiedza na temat motoryzacji powiększa się niczym korozja w bitym polonezie. Podobnie jak liczba jego fanów – obserwuje go blisko 800 000 osób. W swojej książce opisuje i ocenia najpopularniejsze modele samochodów, które kształtowały rzeczywistość polskich dróg. Testuje, sprawdza, porównuje. Punktuje mankamenty, które Mirek Handlarz stara się skrzętnie ukryć. Pisze o modelach, którymi warto się zainteresować, i wskazuje te,

od których trzeba trzymać się jak najdalej. Dzięki tej książce nikt ci nie wciśnie byle grata!
THE INDIAN LISTENER Academic Press

The Indian Listener (fortnightly programme journal of AIR in English) published by The Indian State Broadcasting Service, Bombay, started on 22 December, 1935 and was the successor to the Indian Radio Times in English, which was published beginning in July 16 of 1927. From 22 August, 1937 onwards, it was published by All India Radio, New Delhi. In 1950, it was turned into a weekly journal. Later, The Indian listener became "Akashvani" in January 5, 1958. It was made a fortnightly again on July 1, 1983. It used to serve the listener as a Bradshaw of broadcasting, and give listener the useful information in an interesting manner about programmes, who writes them, take part in them and produce them along with photographs of performing artists. It also contains the information of major changes in the policy and service of the organisation. NAME OF THE JOURNAL: The Indian Listener LANGUAGE OF THE JOURNAL: English DATE, MONTH & YEAR OF PUBLICATION: 07-02-1944 PERIODICITY OF THE JOURNAL: Fortnightly NUMBER OF PAGES: 80 VOLUME NUMBER: Vol. IX, No. 4 BROADCAST PROGRAMME SCHEDULE PUBLISHED (PAGE NOS): 12, 21-76 ARTICLE: 1. Miscellaneous Publication All India Radio (AIR), New Delhi

Now in its fifth edition, *Medical Management of the Surgical Patient: A Textbook of Perioperative Medicine* has been fully revised and updated and continues to provide an authoritative account of all aspects of perioperative care for surgical patients. Including recommended plans which aid accurate treatment of patients, it provides an evidence-based approach for consulting physicians to care for patients with underlying medical conditions that will affect their surgical management. The latest minimally invasive surgical techniques are included, with new chapters on thoracic aortic disease, reconstruction after cancer ablation, lung transplantation, esophagomyotomy, vasectomy and thyroid malignancies, amongst others. With detailed descriptions of nearly one-hundred operations, highlighting their usual course as well as their common complications, the book encourages learning from experience. This definitive account includes numerous contributions from leading experts at national centers of excellence. It will continue to serve as a significant reference work for internists, hospitalists, anesthesiologists and surgeons.

Il Tirocinio Diretto Digitale Integrato rappresenta una nuova e importante modalità di tirocinio di carattere sperimentale, che ha la funzione primaria di garantire a tutti la possibilità di vivere questa fondamentale esperienza pre-professionale anche attraverso modalità virtuali e di ampliare e arricchire le opportunità di formazione per i futuri docenti di scuola dell'infanzia e di scuola primaria. Il progetto sperimentale, nato dalla necessità di dare una risposta al bisogno di garantire la praticabilità di percorsi professionalizzanti in una fase in cui, a causa della pandemia, non era possibile accogliere tutti gli studenti nelle scuole, è stato progettato con l'Ufficio Scolastico Regionale della Toscana e rappresenta l'esito dell'impegno costante del corso di laurea con l'USR Toscana per garantire il diritto allo studio degli studenti e valorizzare la disponibilità delle scuole ad accogliere i tirocinanti.

Improvement of the Retrieval Arm Control System for the Automated Cone Machine

Springer Science & Business Media

Collection of the monthly climatological reports of the United States by state or region, with monthly and annual national summaries.

Process Identification and PID Control Nova Publishers

Semiconducting and Insulating Crystals details how absorption spectroscopy provides information on the nature, concentration, charge state and configuration of impurities in crystals and also on their kinetics and transformations under annealing. After an introduction of the bulk optical properties of semiconductors and insulators and of impurities in crystals, this book presents the physical bases

necessary for the understanding of impurity spectra. The description of various set-ups and accessories used in absorption spectroscopy is followed by a presentation of experimental results on specific impurities and classes of impurities and their relation with those obtained by various computation and by other experimental techniques.

Climatological Data, Oregon John Wiley & Sons

Stress Testing and Risk Integration in Banks provides a comprehensive view of the risk management activity by means of the stress testing process. An introduction to multivariate time series modeling paves the way to scenario analysis in order to assess a bank resilience against adverse macroeconomic conditions. Assets and liabilities are jointly studied to highlight the key issues that a risk manager needs to face. A multi-national bank prototype is used all over the book for diving into market, credit, and operational stress testing. Interest rate, liquidity and other major risks are also studied together with the former to outline how to implement a fully integrated risk management toolkit. Examples, business cases, and exercises worked in Matlab and R facilitate readers to develop their own models and methodologies. Provides a rigorous statistical framework for modeling stress test in line with U.S. Federal Reserve FRB CCAR (Comprehensive Capital Analysis Review), U.K. PRA (Prudential Regulatory Authority), EBA (European Banking Authority) and comply with Basel Accord requirements Follows an integrated bottom-up approach central in the most advanced risk modelling practice Provides numerous sample codes in Matlab and R

New Developments in Materials Science Research

The most comprehensive work on a number of practical numerical methods for analyzing passive structures in microwave and millimeter-wave integrated circuits. The introduction presents a brief comparison of the various numerical methods and how they may be integrated into computer-aided design programs, so the reader can make the appropriate choice. Chapters following present step-by-step, detailed descriptions of the methods, each chapter written by the utmost authority on the subject. Chapters provide illustrative examples and are written so that the reader can write his own computer program based on the numerical method described (some chapters include sample computer programs).

Вычислительные Машины И Искусственный Интеллект

Process Identification and PID Control enables students and researchers to understand the basic concepts of feedback control, process identification, autotuning as well as design and implement feedback controllers, especially, PID controllers. The first two parts introduce the basics of process control and dynamics, analysis tools (Bode plot, Nyquist plot) to characterize the dynamics of the process, PID controllers and tuning, advanced control strategies which have been widely used in industry. Also, simple simulation techniques required for practical controller designs and research on process identification and autotuning are also included. Part 3 provides useful process identification methods in real industry. It includes several important identification algorithms to obtain frequency models or continuous-time/discrete-time transfer function models from the measured process input and output data sets. Part 4 introduces various relay feedback methods to activate the process effectively for process identification and controller autotuning. Combines the basics with recent research, helping novice to understand advanced topics Brings several industrially important topics together: Dynamics Process identification Controller tuning methods Written by a team of recognized experts in the area Includes all source codes and real-time simulated processes for self-practice Contains problems at the end of every chapter PowerPoint files with lecture notes available for instructor use
