This text, extensively class-tested over a decade at UC Berkeley and UC San Diego, explains the fundamentals of algorithms in a story line that makes the material enjoyable and easy to digest. Emphasis is placed on understanding the crisp mathematical idea behind each algorithm, in a manner that is intuitive and rigorous without being unduly formal. Features include: The use of boxes to strengthen the narrative: pieces that provide historical context, descriptions of how the algorithms are used in practice, and excursions for the mathematically sophisticated. Carefully chosen advanced topics that can be skipped in a standard one-semester course but can be covered in an advanced algorithms course or in a more leisurely two-semester sequence. An accessible treatment of linear programming introduces students to one of the greatest achievements in algorithms. An optional chapter on the quantum algorithm for factoring provides a unique peephole into this exciting topic. In addition to the text DasGupta also offers a Solutions Manual which is available on the Online Learning Center. "Algorithms is an outstanding undergraduate text equally informed by the historical roots and contemporary applications of its subject. Like a captivating novel it is a joy to read." This text in a hundred pages explains how to make a bookkeeping and financial reporting system in Google Sheets or Microsoft Excel. It is the simpler, faster, and better 2.nd edition of a tried-and-tested double-entry system, whose 1.st edition was already smart, dependable, and easy to use. The text pragmatically and directly links accounting, ICT, and business management. It covers profit & loss, balance sheet, cash flow, explanatory notes & specifications, journal & ledger, rolling & fixed budget, group consolidation and KPI monitoring, system audit, error checking, data validation, and troubleshooting. The system features automated sales tax/VAT with multiple rates and withheld tax, IFRS/GAAP compliant currency accounting with daily spot rate lookup, multiple reporting entities with multiple banks and types of bills, and unique hard-to-get facilities like dynamic single-entry sub-accounting, spreadsheet formula integration, and reporting in other languages. The author is a senior businessperson with an MBA degree from Henley Business School, who owns and manages a portfolio of firms. The design is free from programming (VBA, scripts, macros...) and hard limit usage tiers (number of businesses, reports, accounts, records, currencies...).
