The field of computational intelligence has grown tremendously over that past five years, thanks to evolving soft computing and

artificial intelligent methodologies, tools and techniques for envisaging the essence of intelligence embedded in real life observations. Consequently, scientists have been able to explain and understand real life processes and practices which previously often remain unexplored by virtue of their underlying imprecision, uncertainties and redundancies, and the unavailability of appropriate methods for describing the incompleteness and vagueness of information represented. With the advent of the field of computational intelligence, researchers are now able to explore and unearth the intelligence, otherwise insurmountable, embedded in the systems under consideration. Computational Intelligence is now not limited to only specific computational fields, it has made inroads in signal processing, smart manufacturing, predictive control, robot navigation, smart cities, and sensor design to name a few. Recent Trends in Computational Intelligence Enabled Research: Theoretical Foundations and Applications explores the use of this computational paradigm across a wide range of applied domains which handle meaningful information. Chapters investigate a broad spectrum of the applications of computational intelligence across different platforms and disciplines, expanding our knowledge base of various research initiatives in this direction. This volume aims to bring together researchers, engineers, developers and practitioners from academia and industry working in all major areas and interdisciplinary areas of computational intelligence, communication systems, computer networks, and soft computing. Provides insights into the theory, algorithms, implementation, and application of computational intelligence techniques Covers a wide range of applications of deep learning across various domains which are researching the applications of computational intelligence Investigates novel techniques and reviews the state-of-the-art in the areas of machine learning, computer vision, soft computing techniques

Relevance and Use of Literature Reviews IGI Global

Social sciences have always been an important tool that enables human beings to examine and understand society. Through social sciences, researchers gain understandings of social phenomena and changes by providing commentaries, producing explanations, and attempting to synthesize a diversity of information sets to formulate theories. Since the concept of change has been the hallmark of the new millennium, researchers have witnessed a transformation in every aspect of the modern world at an ever-increasing speed, particularly in the social facet of human life. Ways of thinking that had previously been upheld and taught may, therefore, no longer be appropriate or effective as tools to understand contemporary phenomena and changes. The [Handbook of Research on Current Trends in Asian Economics, Business, and Administration](#) is a critical reference source that examines different aspects of social sciences, management, sociology, and education to better understand today's society and social life in the Asian context. The book identifies trends, impacts, and implications of disruptive technologies for business and socio-economic development as well as strategic advantage on different levels of business and administration. Covering topics that include e-commerce, green management, information technology, economic growth, and distance learning, this book is essential for economists, academicians, government officials, policymakers, social scientists, managers, leaders, behavioral scientists, academicians, researchers, and students.

Current Issues and Trends in E-government Research John Wiley & Sons

The integrity of knowledge that emerges from research is based on individual and collective adherence to core values of objectivity, honesty, openness, fairness, accountability, and stewardship. Integrity in science means that the organizations in which research is conducted encourage those involved to exemplify these values in every step of the research process. Understanding the dynamics that support "or distort" practices that uphold the integrity of research by all participants ensures that the research enterprise advances knowledge. The 1992 report *Responsible Science: Ensuring the Integrity of the Research Process* evaluated issues related to scientific responsibility and the conduct of research. It provided a valuable service in describing and analyzing a very complicated set of issues, and has served as a crucial basis for thinking about research integrity for more than two decades. However, as experience has accumulated with various forms of research misconduct, detrimental research practices, and other forms of misconduct, as subsequent empirical research has revealed more about the nature of scientific misconduct, and because technological and social changes have altered the environment in which science is conducted, it is clear that the framework established more than two decades ago needs to be updated. *Responsible Science* served as a valuable benchmark to set the context for this most recent analysis and to help guide the committee's thought process. *Fostering Integrity in Research* identifies best practices in research and recommends practical options for discouraging and addressing research misconduct and detrimental research practices.

Educational Trends Exposed explains and critically reviews eighteen of the most prevalent trends sweeping schools, colleges and universities over the last decade and beyond. Amid the buzz from news outlets, websites and social media peddling 'this works' approaches and 'quick fix' solutions, this book provides educators with a practical tool to help answer important questions such as: what does this trend actually involve? Is it worth the investment of time and resources? Does it work - what does research say? Do the claimed benefits to students outweigh any downsides? In this timely book, David Armstrong and Gill Armstrong cast a critical, expert eye over these trends, referencing the latest research and offering a framework for considering educational trends, empowering readers as informed critical consumers. They argue that trends disclose deeper truths about the state and direction of contemporary public education in Australia, England and the US and provide original, thought-provoking analysis. This book demonstrates that a greater understanding of trends can teach some important lessons, including how parents, teachers and educational decisions makers can agitate and collaborate for a modernised and more socially equitable education system. *Educational Trends Exposed* is essential reading for pre- and in-service teachers, and all educational decision makers who are faced with a choice of which trend, if any, to follow.

[New Trends in Qualitative Research \(WCQR2021\)](#) Nova Publishers English as a Lingua Franca, or ELF for short, is currently one of the most dynamic topics in the fields of applied and socio-linguistics and English Language Teaching. It has been a thriving field of research for the last twenty years with a growing number of books and journals dedicated to the subject. The field has also seen the foundation of an annual international ELF conference series, which started in 2008 and attracts growing numbers year on year. This book has developed out of contributions to the Second International ELF conference held in Southampton (UK) in 2009. The papers in this volume provide new insights into ELF, by presenting and exploring the implications of some of the latest findings of empirical research in key ELF research areas including business and academic ELF, intercultural communication, language attitudes and ideologies, code-switching, and accommodation. These papers will have a broad appeal among applied- and socio-linguists, both academics and under/post-graduate students, as well as ELT practitioners around the world.

They will also be of interest to language planners because of the potential of the research to inform English language policies and practices.
