Exploring experimental attitudes in music Experimental Affinities in Music brings together diverse artistic, musicological, historical, and philosophical

essays, enhancing a broad discourse on artistic experimentation, and exploring various experimental attitudes in music composed between the thirteenth and twentieth centuries. The golden thread running through the different chapters is the quest for inherently experimental musical practices, a quest pursued from interrogating, descriptive, or challenging perspectives, and always in relation to concrete music examples.

Experimental is taken as an adventurous compositional, interpretive, or performative attitude that can cut across different ages and styles.

Affinities suggest connectors and connections, convergences, contiguities, and adjacencies that are found in and through a diversity of approaches and topics. The texts share a common genesis: the lectures of the International Orpheus Academies for Music and Theory convened by Luk Vaes (2011) and Paulo de Assis (2012, 2013). The affinities found in this volume include essays by Lydia Goehr, Felix Diergarten, Mark Lindley, Martin Kirnbauer, Edward Wickham, Lawrence Kramer, Hermann Danuser, and Thomas Christensen, as well as interviews with pianist Leon Fleisher, with pianist-composer Frederic Rzewski, and with composer Helmut Lachenmann. Contributors Paulo de Assis (Orpheus Institute, Ghent), Thomas Christensen (University of Chicago), Hermann Danuser (Humboldt University), Felix Diergarten (Schola Cantorum Basiliensis), Leon Fleisher (pianist), Lydia Goehr (Columbia University), Martin Kirnbauer (University of Basel), Lawrence Kramer (Fordham University), Helmut Lachenmann (composer), Mark Lindley (University of Hyderabad), Frederic Rzewski (pianist-composer), Luk Vaes (Orpheus Institute, Ghent), Edward Wickham (St Catharine's College, Cambridge)

In this introduction to natural-base music theory, Ernst Levy presents the essentials of a comprehensive, consistent theory of harmony developed from tone structure. A Theory of Harmony is a highly original explanation of the harmonic language of the last few centuries, showing the way toward an understanding of diverse styles of music. Basic harmony texts exist, but none supply help to students seeking threads of logic in the field. In a text abundantly illustrated with musical examples, Levy makes clear the few principles that illuminate the natural forces in harmony. He shows that general principles can be successfully extracted from the wealth of examples. This book actually provides a theory of harmony. One of the major musical minds of the twentieth century, Ernst Levy was born in Basel, Switzerland, in 1895. His musical career spanned more than seven decades, from his first public piano performance at age six. A naturalized U.S. citizen, he lived here from 1941 to 1966, teaching at the New England Conservatory, the University of Chicago, Bennington College, the Massachusetts institute of Technology, and Brooklyn College. After his retirement, Levy returned to Switzerland where he continued to compose until his death in 1981. He was an enormously productive composer, with hundreds of works to his credit including symphonies, string quartets, songs in English, French, and German, and music for solo instruments and small ensembles. His piano recordings, particularly of the last Beethoven sonatas and the Liszt sonata, have become collectors' items. He thought of himself as a successor to Reimann, immediately, and Rameau, more remotely.
