**Handbook for Brunner and Suddarth's Textbook of Medical-Surgical Nursing** Jones & Bartlett Publishers

This book offers an overview of acute care surgery around the world, focusing on the four main branches of this novel subspecialty: trauma, general emergencies, critical care, and rescue surgery. The book's primary goal is to provide a general view of acute care surgery, while addressing the most important issues in depth. The content is divided into three parts, the first of which is dedicated to the general organization of trauma centers, including

the composition of modern trauma teams. Protocols of activation and action for the trauma team, as well as damage control procedures both in the emergency room and in the surgical theatre, are described. The book also addresses the development of a trauma registry, together with the quality assessment process that can be applied. In turn, the second part describes the principal protocols for making diagnoses, with special attention to circumstances such as unstable hemodynamics, neurological deterioration, normal vital signs, and penetrating injuries. The book subsequently deals with the most important aspects of trauma to the abdomen, chest, and pelvis, with notes on both surgical and intensive care issues. Practical descriptions of how to

treat principal injuries to various organs are also provided. Finally, the third part of the book is dedicated to the most frequent general surgical emergencies and rescue surgical approaches, and includes information on diagnostic support with point of care ultrasound and endoscopic advanced techniques. Presenting cutting-edge strategies, this book will be of interest to professionals involved in surgical and intensive care for emergency conditions, such as colonic perforations, obstructions, acute pancreatitis, biliary tree stones, and caustic injuries.

Philosophy My philosophy is basic...provide the highest quality service possible to every person you encounter. We are an institution of higher learning; we need to be the best with everything we do. We are preparing the next generation of heroes for the greatest fighting force on the planet - the 8404 Hospital Corpsman assigned to the United States Marine Corps. They operate at the tip-of-the spear providing combat medicine to our operational forces; they are critical to the success of the Navy & Marine Corps Medicine Team. What each one of us does on a daily basis matters, regardless of our job. We all contribute to the mission. No one job is more important than the other. If just one link (team member) in this chain fails to perform a portion of the mission

to standard, we all fail. You have the ability to make a positive difference in peoples' lives every day. Every member of this team should ask themselves, "Am I living by our core values and making decisions that are consistent with these values when I interact with students, staff and the American public." Key points: - Know your chain of command and how to use it. You have not exhausted your chain of command at FMTB-West until the issue reaches me. - If you are lacking something to perform your mission, bring it to the attention of leadership so we can promptly address it. - Any safety issue should immediately be brought to leadership. - Continually strive to improve processes; ask for help before it's too late (in all aspects of your life and career). - If you see a problem,

fix it or bring it to the attention of someone who can. Don't ignore it. - Supporting each other is just as important as supporting the mission. - Continue the relentless pursuit of customer satisfaction; feedback is a valuable tool in life and career. - Basic military courtesy should be a part of everyday life. - Always strive to do the right thing, even when no one is looking or when tempted to take the "easy" wrong. As a leader, I believe all members of the team are important. Our civilian shipmates are essential to the success of our mission. As a military leader, I believe, as the Sailor creed says, "I proudly serve my country's Navy combat team with Honor, Courage and Commitment. I am committed to excellence and the fair treatment of all".

I cannot over emphasize the importance of leadership from E-1 to O-6, everyone has a part; I expect officers to lead from the front by setting the example. Be sure that regularly scheduled performance counseling sessions are conducted for military and civilian employees. Cover the good which should be sustained as well as the areas which need improvement. Although I like to be informed, I believe in allowing leaders to lead, managers to manage. A big part of my job is to provide you the support systems necessary for you to accomplish your mission. Tell me what you need and don't worry how it will be resourced. Let me worry about that.

One night in early 1976, the world of trauma medicine changed forever in a frozen Nebraska field where Dr. James Styner crashed his small airplane with his wife and four children aboard. The experience of the eight hours he spent isolated and awaiting rescue that never came, his journey to the local hospital where he found inadequate care, and his family's evacuation and arrival at the sanctity of Lincoln General Hospital

compelled him to develop a revolutionary new concept of emergency medical care. That night Advanced Trauma Life Support was born, and grew to become the standard of emergency trauma care throughout the world. Today it continues to save countless lives and it continues to grow. This is the story of ATLS and that tragic night for the Styner family, but it is also the story of the author's personal journey to find the truth about the accident that not only took the life of his mother, but nearly took his - and how doing so was one of the most important things he ever did.

Compartment syndrome is a complex physiologic process with significant potential harm, and though an important clinical problem, the basic science and research surrounding this entity remains poorly understood. This unique open access book fills the gap in the knowledge of compartment syndrome, re-evaluating the current state of the art

on this condition. The current clinical diagnostic criteria are presented, as well as the multiple dilemmas facing the surgeon. Pathophysiology, ischemic thresholds and pressure management techniques and limitations are discussed in detail. The main surgical management strategy, fasciotomy, is then described for both the upper and lower extremities, along with wound care. Compartment syndrome due to patient positioning, in children and polytrauma patients, and

unusual presentations are likewise covered. Novel diagnosis and prevention strategies, as well as common misconceptions and legal ramifications stemming from compartment syndrome, round out the presentation. Unique and timely, *Compartment Syndrome: A Guide to Diagnosis and Management* will be indispensable for orthopedic and trauma surgeons confronted with this common yet challenging medical condition.
