An investigation into the conceptual foundations of a new way of thinking about the mind that does not locate all cognition "in the head." There is a new way of thinking about the mind that does not locate mental processes exclusively "in the head." Some think that this expanded conception of the mind will be the basis of a new science of the mind. In this book, leading philosopher Mark Rowlands investigates the conceptual foundations of this new science of the mind. The new way of thinking about the mind emphasizes the ways in which mental processes are embodied (made up partly of extraneural bodily structures and processes), embedded (designed to function in tandem with the environment), enacted (constituted in part by action), and extended (located in the environment). The new way of thinking about the mind, Rowlands writes, is actually an old way of thinking that has taken on new form. Rowlands describes a conception of mind that had its clearest expression in phenomenology—in the work of Husserl, Heidegger, Sartre, and Merleau-Ponty. He builds on these views, clarifies and renders consistent the ideas of embodied, embedded, enacted, and extended mind, and develops a unified philosophical treatment of the novel

conception of the mind that underlies the new science of the mind.

The French produced some of the most striking and innovatory interwar cruiser designs. A large amount of new information about these ships has become available over the past twenty years in France, but this book is the first to make this accessible to an English-speaking readership. Part I explains the design philosophy behind each of the classes built after 1922, and outlines the characteristics of each type,

accompanied by detailed data tables and a comprehensive set of specially-drawn plans based on official documents, as well as carefully-selected photographs. Coverage includes the De Grasse, laid down in August 1939 and completed postwar as an AA cruiser, and also the heavy cruisers of the Saint Louis class intended to follow her, about which little has been published. Part II deals with the historical side, covering not only the eventful careers of these ships, but also explaining the peacetime organisation of the Marine Nationale, the complex politics of this turbulent period and their impact on the navy. Like its highly successful predecessor, *French Battleships*, this beautifully presented book subtly blends technical and historical analysis to produce what must become the standard reference work.

**The North Sunderland Railway** MIT Press  
Updated to reflect the latest technology in the automotive industry, this book will provide the knowledge and skills needed to successfully inspect, maintain, and repair vehicles of all makes and models.

**Automotive Service: Inspection, Maintenance, and Repair, 3E** begins by introducing readers to a number of automotive career options, shop management basics, plus necessary tools and equipment. The book then progresses to the theories of vehicle systems operations and includes step-by-step procedures for troubleshooting and repairing all major systems of the modern automobile. Updates include coverage of new vehicle technology like EVAP systems, on-board diagnostics and emissions, alternative fuels, and hybrid vehicles, making this book not only comprehensive but also current so that readers can feel confident they are learning the very latest in industry trends and techniques.
