Towards a Comprehensive Theory of Human Learning Oxford University Press on Demand

This book explores the complexity and depths of our digital world by providing a selection of analyses and discussions from the 16th annual international conference on Computers, Privacy and Data Protection (CPDP): Ideas that Drive Our Digital World. The first half of the book focuses on issues related to the GDPR and

data. These chapters provide a critical analysis of the 5-year history of the complex GDPR enforcement system, covering: codes of conduct as a potential co-regulation instrument for the market; an interdisciplinary approach to privacy assessment on synthetic data; the ethical implications of secondary use of publicly available personal data; and automating technologies and GDPR compliance. The second half of the book shifts focus to novel issues and ideas that drive our digital world. The chapters offer analyses on social and environmental sustainability of smart cities; reconstructing states as information platforms; stakeholder identification using the example of video-based Active and

Assisted Living (AAL); and a human-centred approach to dark patterns. This interdisciplinary book takes readers on an intellectual journey into a wide range of issues and cutting-edge ideas to tackle our ever-evolving digital landscape.

Towards a Comprehensive Peace-building Policy and Strategy for Ethiopia Springer Science & Business Media

Advances in Mixed Methods Research provides an essential introduction to the fast-growing field of mixed methods research. Bergman's book examines the current state of mixed-methods research, exploring exciting new ways of conceptualizing and conducting empirical research in the social and health sciences. Contributions from the world's leading experts in qualitative, quantitative, and mixed methods approaches are brought together, clearing the way for a more constructive approach to social research. These contributions cover the main practical and methodological issues and include a number of different visions of what mixed methods research is. The discussion also covers the use of mixed methods in a diverse range of fields, including sociology, education, politics, psychology, computational science and methodology. This book represents an important contribution to the ongoing debate surrounding the use of mixed methods in the social sciences and health research, and presents a convincing argument that the conventional, paradigmatic view of qualitative and quantitative research is outdated and in need of replacement. It will be essential reading for anyone actively engaged in qualitative, quantitative and mixed methods research and for students of social research methods. Manfred Max Bergman is Chair of Methodology and Political Sociology at the University of Basel.

Towards a framework for assessing the sustainability of social-ecological landscapes BRILL

Information Systems (IS) as a discipline draws on diverse areas including, technology, organisational theory, management and social science. The field is recognized as very broad and encompassing many themes and areas. However, the development of artefacts, or information systems development (ISD), in the broadest sense, is a central concern of the discipline. Significantly, ISD impacts on the organisational and societal contexts through the use of the artefacts constructed by the development. Today, that impact also needs to be evaluated in terms of its effects on the environment. Sustainable, or "green," IT is a catch-all term used to describe the development, manufacture, management, use and disposal of ICT in a way that minimizes damage to the environment. As a result, the term has many different meanings, depending on the role assumed in the life span of the ICT artefact. The theme of the proposed work is to critically examine the whole range of issues around ISD from the perspective of sustainability. Sustainable IT is an emerging theme in academic research and industry practice in response to an individual concern for the environment and the embryonic regulatory environments being enacted globally to address the environmental impact of ICT. In this work we intend to bring together in one volume the diverse research around the development of sustainable IS.

Data Protection and Privacy, Volume 16 Springer Science & Business Media

Authored by 40 of the most prominent and renowned international scientists from academia, industry, institutions and

government, this handbook explores mature, evolving technologies for a clean, economically viable alternative to non-renewable energy. In so doing, it includes how hydrogen can be safely produced, stored, transported and utilized, while also covering such broader topics as the environmental impact, education and regulatory developments.

What Works Routledge

This book provides detailed descriptions of big data solutions for activity detection and forecasting of very large numbers of moving entities spread across large geographical areas. It presents state-of-the-art methods for processing, managing, detecting and predicting trajectories and important events related to moving entities, together with advanced visual analytics methods, over multiple heterogeneous, voluminous, fluctuating and noisy data streams from moving entities, correlating them with data from archived data sources expressing e.g. entities' characteristics, geographical information, mobility patterns, mobility regulations and intentional data. The book is divided into six parts: Part I discusses the motivation and background of mobility forecasting supported by trajectory-oriented analytics, and includes specific problems and challenges in the aviation (air-traffic management) and the maritime domains. Part II focuses on big data quality assessment and processing, and presents novel technologies suitable for mobility analytics components. Next, Part III describes solutions toward processing and managing big spatio-temporal data, particularly enriching data streams and integrating streamed and archival data to provide coherent views of mobility, and storing of integrated mobility data in large distributed knowledge graphs for

efficient query-answering. Part IV focuses on mobility analytics methods exploiting (online) processed, synopsisized and enriched data streams as well as (offline) integrated, archived mobility data, and highlights future location and trajectory prediction methods, distinguishing between short-term and more challenging long-term predictions. Part V examines how methods addressing data management, data processing and mobility analytics are integrated in big data architectures with distinctive characteristics compared to other known big data paradigmatic architectures. Lastly, Part VI covers important ethical issues that research on mobility analytics should address. Providing novel approaches and methodologies related to mobility detection and forecasting needs based on big data exploration, processing, storage, and analysis, this book will appeal to computer scientists and stakeholders in various application domains.

A Rights-Based Preventative Approach for Psychosocial Well-being in Childhood Infinite Study

Environmental Economics in Theory and Practice provides a thorough and coherent review and discussion of environmental economics. It is a guide to the most important areas of natural resource and environmental economics, including the economics of non-renewable and renewable resource extraction, the economics of pollution control, the application of cost-benefit analysis to the environment, and the economics of sustainable development. The book concentrates on key elements of economic theory, and shows how they can be applied to real-world problems. Particular emphasis is placed on analyzing recent empirical studies from all over the world along with in-depth coverage of various economic models. Each chapter

develops the main theoretical results and recent analytic techniques necessary for understanding applications. Throughout the book, results are presented in words, graphs, and mathematical models; brief technical notes inform readers about optimal control theory, the Kuhn-Tucker conditions, game theory, and linear programming. Moving through the laws of thermodynamics to an analysis of market failure, the book turns to the economics of natural resources and pollution control. It concludes with an examination of environmental cost-benefit analysis and sustainable development. A comprehensive text, it is particularly suitable for use in advanced undergraduate and graduate courses in environmental and resource economics. Because of up-to-date coverage, it will also be of interest to professionals working in resource and environmental economics.

Big Data Analytics for Time-Critical Mobility Forecasting SAGE Globally, nearly 3 billion people rely on traditional biomass, such as fuelwood, charcoal or animal waste, as sources of fuel for cooking and heating. The multi-sectoral challenges related to energy access make it crucial to view the issue in a broader frame. FAO's work on Safe Access to Fuel and Energy (SAFE) adopts a holistic, multi-faceted approach which takes into account the mutually reinforcing linkages between energy and nutrition, disaster risks and climate change, conflict, health, gender, protection and livelihoods. This publication aims to provide a comprehensive framework for mainstreaming energy access for crisis-affected populations as a key component of overall resilience-building.

A Comprehensive Framework for Evaluating Sustainable Green Building Indicators under an Uncertain Environment

Springer

Accounting systems and sustainability management are vital for company management and performance. This is particularly difficult for small businesses. As such, it is necessary to understand the features and issues of sustainable accounting systems, with a particular focus on small business. *Maintaining Sustainable Accounting Systems in Small Business* is a critical scholarly resource that explores sustainability accounting systems with small businesses and how the economic, social, and environmental aspects are related to each other in the company's management and performance. Featuring coverage on a broad range of topics such as management control system, integrated reporting, and small and medium enterprises, this book is geared towards entrepreneurs, business managers, academicians, business professionals, and graduate-level students seeking practical information about the different sustainable accounting systems from strategic, organizational, and accounting perspectives.

Marketing, Technology and Customer Commitment in the New Economy United Nations

This is the fourth in a series publishing the best contributions on environmental management accounting (EMA) from around the world. This volume brings together international examples of leading thinking and practice in this rapidly developing area. This is the most comprehensive volume to date covering theory, practice and case studies on sustainability accounting and reporting. It covers tools, frameworks, concepts as well as case studies and empirical analysis.

Maritime Security Cooperation in the Gulf of Guinea John Wiley &

Sons

There is an urgent need to better understand the legal issues pertaining to alternative dispute resolution (ADR), particularly in relation to mediation clauses. Despite the promotion of mediation by dispute resolution providers, policy makers, and judges, use of mediation remains low. In particular, problems arise when parties lack certainty regarding the legal effect of a mediation clause, and the potential uncertainty regarding the binding nature of agreements to pursue mediation is problematic and threatens the growth of ADR. This book closely examines the importance and complexity of mediation clauses in commercial contracts to remedy this persistent uncertainty. Using comparative law methods and detailed empirical research, it explores the creation of a comprehensive framework for the mediation clause. Providing valuable insight into the process of ADR and mediation, this book will be of interest to academics, law makers, law students, in-house council, lawyers, as well as parties interesting in drafting enforceable mediation clauses.

Towards a comprehensive documentation and use of Pistacia genetic diversity in Central and West Asia, North Africa and Europe Bioversity International

This volume includes the full proceedings from the 2005 Academy of Marketing Science (AMS) Annual Conference held in Tampa, Florida, entitled Marketing, Technology and Customer Commitment in the New Economy. It include papers aimed to create awareness of the issues, trends, and advances associated with current global marketing challenges. Founded in 1971, the Academy of Marketing Science is an international organization dedicated to promoting timely explorations of phenomena related

to the science of marketing in theory, research, and practice. Among its services to members and the community at large, the Academy offers conferences, congresses and symposia that attract delegates from around the world. Presentations from these events are published in this Proceedings series, which offers a comprehensive archive of volumes reflecting the evolution of the field. Volumes deliver cutting-edge research and insights, complimenting the Academy's flagship journals, the Journal of the Academy of Marketing Science (JAMS) and AMS Review. Volumes are edited by leading scholars and practitioners across a wide range of subject areas in marketing science. Futureproof: A comprehensive framework for teaching digital citizenship in schools Springer Nature

Personalized medicine is a medical paradigm that emphasizes systematic use of individual patient information to optimize that patient's health care, particularly in managing chronic conditions and treating cancer. In the statistical literature, sequential decision making is known as an adaptive treatment strategy (ATS) or a dynamic treatment regime (DTR). The field of DTRs emerges at the interface of statistics, machine learning, and biomedical science to provide a data-driven framework for precision medicine. The authors provide a learning-by-seeing approach to the development of ATSS, aimed at a broad audience of health researchers. All estimation procedures used are described in sufficient heuristic and technical detail so that less quantitative readers can understand the broad principles underlying the approaches. At the same time, more quantitative readers can implement these practices. This book provides the most up-to-date summary of the current state of the statistical

research in personalized medicine; contains chapters by leaders in the area from both the statistics and computer sciences fields; and also contains a range of practical advice, introductory and expository materials, and case studies.

Natural resources, and the materials derived from them, represent the physical basis for the economic system. Recent decades have witnessed an unprecedented growth in demand for these resources, which has triggered interest from policy makers in transitioning to a more resource efficient and ...

The BPM Maturity Model. Towards a Framework for Assessing the Business Process Management Maturity of Organisations IWMI

In this book the authors review initiatives in improving the quality of care for family planning in India and bring them to the broader forum of policy-level discussions. The global Family Planning 2020 (FP2020) framework argues for voluntary rights-based family planning programmes. The rights-based approach builds on the bedrock of quality of care, which means listening to what women want, treating individuals with dignity and respect and ensuring that everyone has access to full information and high quality care. Improving the quality of care in family planning services in a country like India is crucial from individual, national and global considerations. This book critically discusses and evaluates the various interventions undertaken so far and the reasons for success and failure. It also synthesizes current research studies in India, identifies gaps and presents a research agenda to bridge this gap and accelerate progress towards improving quality of care in family planning. It presents a

comprehensive framework that underscores the importance of health systems and community environments in creating enabling, motivating and empowering roles for providers and clients. The examples and perspectives presented in this book make a strong case for adoption into policy frameworks and scaling up of quality of care efforts, and identifying research priorities for strengthening the response to family planning. This book greatly contributes towards enhancing the quality of family planning care at the grass-roots level in low resource settings and is of interest to researchers and practitioners of public health, particularly community health, maternal and child health, and social work.

Towards a Comprehensive Health Policy for the 1970's Fortis Novum Mundum

The report proposes a framework for assessing the sustainability of social-ecological landscapes (SEL) to be used by the West and Central African Food Systems Transformation (TAFS-WCA) initiative for research, planning, and implementation of its Work Package 3 (WP3). It builds on existing assessment frameworks from relevant fields (e.g., Eco agriculture, Agroecology, Integrated Landscape Management, etc.). At the center of a Sustainable Social-Ecological Landscape (SSEL) is the improvement of the management of land and the natural resource base in such a way that land use concurrently meets three goals: (i) provision of products (e.g., food) and services on a sustainable basis, (ii) support for sustainable livelihoods for all social groups and (iii) conservation of the full complement of biodiversity and ecosystem services. Globally, SSEL related approaches like eco-agriculture, agroecology, and landscape

approaches are already being applied, with promising results, especially in places where food production, poverty alleviation, and conservation of biodiversity, water, and ecosystem services are all high priorities. However, a comprehensive framework for measuring/monitoring landscape status and performance vis-a-vis competing landscape uses and management interventions has not been given much priority in the literature. Different forms of land use, such as forestry, agriculture, extraction of minerals, conservation/protected areas, and settlements, are interdependent. Therefore, landscape performance and monitoring frameworks that focus exclusively on protecting natural resources or the intensification of agriculture and other land uses can only give an incomplete viewpoint/overview of landscapes with all their uses and stakeholders. Considering the SSEL goals above, a holistic conceptual framework for landscape-based assessment is needed; such a framework must consider the drivers and effects of land use and the individual management interventions as well as the complex interactions among different land uses and interventions across the landscape. The present study proposes the Drivers-Pressure-State-Impact-Response (DPSIR) framework for SEL. It is important to emphasize that this study recognizes that different individuals and organizations under the TAFS-WCA initiative may have different interests in understanding the status and performance of selected SELs. The research envisages two important applications of a framework for measuring and understanding SEL: i) it can facilitate inclusive decision-making by multiple stakeholders working in the same landscape by explaining interactions, synergies, and trade-offs among SSEL goals and

landscape components, and ii) when SSEL-related management innovations are successful (or otherwise), the framework can help document the same, reinforcing the case for adopting and scaling up innovations.

Building Sustainable Information Systems Cambridge University Press

"A Comprehensive Framework for Adapting National Intelligence for Domestic Law Enforcement" is a groundbreaking book that delves into the intricate process of integrating sophisticated national intelligence methodologies into domestic law enforcement practices. Authored by a seasoned expert in the field of intelligence, this book emerges as a critical resource for military leaders, policymakers, members of the intelligence community, and law enforcement personnel. This insightful work begins by exploring the historical evolution of intelligence sharing, offering a thorough analysis of past and present strategies. It then seamlessly transitions into discussing the current challenges and opportunities faced in integrating national intelligence into domestic law enforcement. The book provides an in-depth examination of legal and ethical frameworks, ensuring that the proposed methods adhere to the highest standards of civil liberties and legal compliance. Central to the book is the development of a comprehensive framework that bridges the gap between national intelligence operations and local law enforcement requirements. This framework not only addresses operational aspects but also focuses on the technological advancements, such as AI and big data analytics, reshaping intelligence gathering and analysis. The author brings to light the importance of cross-sector collaboration, suggesting innovative

ways to enhance cooperation between various sectors – government, private, and non-profit – in intelligence activities. Case studies of successful intelligence collaboration, both domestic and international, are meticulously analyzed, offering practical insights and lessons learned. Moreover, the book addresses the training and skill development necessary for effectively adapting national intelligence practices in a domestic context. It emphasizes the need for continuous professional development and the cultivation of a learning culture within law enforcement agencies. "A Comprehensive Framework for Adapting National Intelligence for Domestic Law Enforcement" concludes with strategic recommendations for policy and practice, advocating for a progressive approach towards intelligence integration. This book is an invaluable asset for anyone involved in or interested in the intersection of national security, intelligence, and domestic law enforcement, providing a comprehensive guide to navigating this complex and evolving landscape.

Towards a Comprehensive MetaCASE and CAME Environment
World Health Organization

Globally, nearly 3 billion people rely on traditional biomass, such as fuelwood, charcoal or animal waste, as sources of fuel for cooking and heating. The multi-sectoral challenges related to energy access make it crucial to view the issue in a broader frame. Mediation and Commercial Contract Law John Catt

Diploma Thesis from the year 2004 in the subject Computer Science - Commercial Information Technology, grade: 1.0, University Karlsruhe (TH) (AIFB & Forschungszentrum Informatik (FZI)), 83 entries in the bibliography, language: English, abstract: Business Process Management (BPM) is a topic that is generating a level of interest in both academic and business circles. The issues and problems that are associated with implementing and gaining support for BPM within organisations are well known. BPM maturity, however, is something that organisations aspire to – but know little about. Research to date indicates that many organisations do not progress past very rudimentary levels of BPM maturity. This is likely due to BPM being seen as a complex and complicated issue. This research looks at what successful organisations see as being key to BPM and what organisations that are unsuccessful in BPM implementation consider being the issues that contributed to their failure. BPM is defined as a holistic management practice that includes the alignment of processes with the corporate strategy and especially with strategic and operational goals. Whilst the use of both methodologies and information technology, as supporting and enabling functions, is important for BPM, organisational and cultural change is identified as one of the critical success factors for BPM implementations. This research focuses on defining BPM maturity in a meaningful and measurable way. It addresses the complexity of BPM maturity by firstly defining what BPM maturity

means and then developing a model that can be used to measure current levels of maturity. In addition, BPM-related benefits are identified, such as increased effectiveness, efficiency, or quality. Increased BPM maturity is characterised as being correlated with an increased probability of achieving these benefits. An increased maturity can lead to a decreased gap between objectives and a current situation. Objectives are also more likely to be met due to less varying results and, therefore, greater ability to predict results. The organisation-wide deeper understanding of how the business is conducted results in work being more consistent and repeatable and as a result more effectively and efficiently. Other benefits of the model are the ability of the organisation to determine strengths and weaknesses in current applications. In doing this, the organisations see benefits in being able to expand knowledge sharing within the organisation by learning from the successes within its own self.

Maintaining Sustainable Accounting Systems in Small Business

IGI Global

This book presents the most interesting talks given at ISSE/SECURE 2007 - the forum for the interdisciplinary discussion of how to adequately secure electronic business processes. The topics include: Identity Management, Information Security Management - PKI-Solutions, Economics of IT-Security - Smart Tokens, eID Cards, Infrastructure Solutions - Critical Information Infrastructure Protection, Data Protection, Legal Aspects. Adequate information security is one of the basic requirements of all electronic business processes. It is crucial for effective solutions that the possibilities offered by security technology can be integrated with the commercial requirements of the

applications. The reader may expect state-of-the-art: best papers of the Conference ISSE/SECURE 2007.

Business Models for the Circular Economy Opportunities and Challenges for Policy John Wiley & Sons

Children are one of the most important phase of human development and the most important target group for social work intervention. Most of the schools of human development and social work round the world have an elective course on children and some offer a concentration in this area. There are plenty of textbooks on intervention with children published by Western authors, focusing on useful theories and skills but mainly at the remedial level. They neither use the preventative approach nor the child rights perspective, which has been found useful in the developing nations. The books on child rights are generally published by the United Nations Children's Fund (UNICEF) and other international organisations working in the field of children such as Save the Children. These books focus on the useful child rights perspective but they neither integrate theories nor use the preventative approach. The proposed book *A Rights-based Preventative Approach for Children's Psychosocial Well-Being*: will be the first to apply the child rights perspective and the preventative approach to intervention for children's psychosocial well-being. It is an integration of theories with practice and teaching relevant in different parts of the world. The book is divided into the following three parts: Part 1: Introduction to a Rights-based Preventative Approach for Children's Psychosocial Well-Being.- Part 2: Primary Prevention for Children's Psychosocial Well-Being.- Part 3: Secondary and Tertiary Prevention for Children's Psychosocial Well-Being
