Rise and Shine - An Integrated Semester
Course for Classes 1 to 5 has been
designed and formulated in accordance
with the guidelines of the latest National
Curriculum Framework (NCF). It is a set
of ten books, two for each class and one
per semester. Each book includes
subjects such as English, Mathematics,
EVS/Science, Social Studies and General
Knowledge. The key feature of the
course is to make learning a joyful
experience. Each book closely
interweaves concepts to lay a strong
foundation at the primary level. The
course focuses on interactive approach
to make the children active participants
in the process of learning. Some of the
key features of the series are : □ Based
on the curriculum guidelines given by
the latest National Curriculum
Framework. □ Graded and matched to
the number of class hours planned by
the schools. □ Key concepts in each
subject linked with interesting
explanations; visual aids such as
illustrations, photographs, diagrams,
maps and tables; activities, games and
real-life examples. □ Carefully graded
and comprehensive exercises for true
evaluation. □ CD for animated lessons
and interactive exercises for better
understanding of the concepts learnt in
the textbook. □ Online support for
Assignments, E-book, Test paper

Generator. □ Teachers Resource Book to
facilitate teaching. Goyal Brothers

SpringBoard Mathematics is a highly
engaging, student-centered instructional
program. This revised edition of
SpringBoard is based on the standards
defined by the College and Career
Readiness Standards for Mathematics for
each course. The program may be used
as a core curriculum that will provide the
instructional content that students need
to be prepared for future mathematical
courses.

Integrated Mathematics Iii (worktext)1st Ed. 1991 World Scientific Publishing Company

The goal of the book is to technologically enhance the preparation of mathematics schoolteachers using an electronic spreadsheet integrated with Maple and Wolfram Alpha — digital tools capable of sophisticated symbolic computations. The content of the book is a combination of mathematical ideas and concepts associated with pre-college problem solving curriculum and their extensions into more advanced mathematical topics. The book provides prospective and practicing teachers with a foundation for developing a deep understanding of many concepts fundamental to the teaching of school mathematics. It also provides the teachers with a technical expertise in designing spreadsheet-based computational environments. Consistent with the current worldwide guidelines for technology-enhanced teacher preparation, the book emphasizes the integration of context, mathematics, and technology as a method for teaching mathematics. Throughout the book, a number of mathematics education documents developed around the world (Australia, Canada, England, Japan, Singapore, United States) are reviewed as appropriate.

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into

actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary

teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
