Gregg Shorthand Series 90 -Trans. Tapes Springer Publishing Company

This thorough revision of the highly successful first edition of Life-Span Development offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasises that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is

increased coverage of the topical issue of successful ageing and a new chapter on the increasingly popular narrative approach to lifespan development. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work.

Social Cognition brings together diverse and timely writings that highlight cutting-edge research and theories on the development of social cognition and social behavior across species and the life span. The volume is organized according to two central themes that address issues of continuity and change both at the phylogenetic and the ontogenetic level. First, the book addresses to what extent social cognitive abilities and behaviors are shared across species, versus abilities and capacities that are uniquely human. Second, it covers to what extent social cognitive abilities and behaviors are continuous across periods of development within and across the life span, versus

their change with age. This volume offers a fresh perspective on social cognition and behavior, and shows the value of bringing together different disciplines to illuminate our understanding of the origins, mechanisms, functions, and development of the many capacities that have evolved to facilitate and regulate a wide variety of behaviors fine-tuned to group living.

Functional Movement Development Across the Life Span - E-Book Exploring Lifespan Development
 What are the changes we see over the life-span? How can we explain them? And how do we account for individual differences? This volume continues to examine these questions and to report advances in empirical research within life-span development increasing its interdisciplinary nature. The relationships between individual development, social context, and historical change are salient issues discussed in this volume, as are nonnormative and atypical events contributing to life-span change.

Executive Function: Development Across the Life Span presents perspectives from leading researchers and theorists on the development of executive function from infancy to late adulthood and the factors that shape its growth and decline. Executive function is the set of higher-order cognitive processes involved in regulating attention, thoughts, and actions. Relative to other cognitive domains, its development is slow and decline begins early in late adulthood. As such, it is particularly sensitive to variations in environments and experiences, and there is growing evidence that it is susceptible to intervention - important because of its link to a wide range of important life outcomes. The volume is made up of four sections. It begins with an overview of executive function's typical development across the lifespan, providing a foundation for the remainder of the volume. The second section presents insights into mechanisms of executive function, as provided by a variety of methodological approaches. The third and fourth sections review the current research evidence on specific factors that shape executive function's development, focusing on normative (e.g., bilingualism, physical activity, cognitive training) and clinically relevant (e.g., substance use, neurodegenerative disease) developmental pathways.
