If your network includes, or will include in the near future, more than one client that connects through 5 GHz Wi-Fi, use a tri-band Wi-Fi router.; Determine whether your home network should have a single router only,

whether you should use a two-router setup, or whether you need a mesh network system. How to Build and Maintain the Best Home Network A computer network comprises two or more computers that are connected—either by cables (wired) or WiFi (wireless)—with the purpose of transmitting, exchanging, or sharing data and resources. You build a computer network using hardware (e.g., routers, switches, access points, and cables) and software (e.g., operating systems or business applications). The Fundamentals of Networking | IBM We design and support your computer network We have over 15 years of experience supporting corporate information technology network and infrastructure. We began in 1993 helping companies to design and implement small office networks. We've helped develop teams supporting high availability data centers and large corporate wide area networks. Computer Network Design and Support LLC The two basic forms of network design are called client-server and peer-to-peer. Client-server networks feature centralized server computers that store email, web pages, files, and applications accessed by client computers and other client devices. On a peer-to-peer network, conversely, all devices tend to support the same functions. What Is a Computer Network?
