The distinct feature in symbolic dynamics is that time is measured in discrete intervals. Symbolic dynamics - Wikipedia A dynamical system is a manifold  $M$  called the phase (or state) space endowed with a family of smooth evolution functions  $\Phi_t$  that for any element of  $t \in T$ , the time, map a point of the phase space back into the phase space. The notion of smoothness changes with applications and the type of manifold. There are several choices for the set  $T$ . When  $T$  is taken to be the reals, the dynamical ... Dynamical system - Wikipedia Dynamical systems first appeared when Newton introduced the concept of ordinary differential equations (ODEs) into Mechanics. In this case,  $(T = \mathbb{R})$ . However, Henri Poincaré is the father of the modern, qualitative theory of dynamical systems.
