 International Marketing Compact offers a new perspective in teaching international marketing. The authors address issues in a novel way by bringing in cases from advanced and emerging markets. In this connection they also discuss technological requirements of the 21st century and how these developments necessitate a change in looking at international marketing issues. The individual chapters follow the necessary steps to develop and implement projects successfully in the international market place. The knowledge, which is provided for both students and practitioners, is well balanced in terms of theoretical input and managerial application. This is the result of numerous examples presented in this book not only from Europe, but also from other markets throughout the world. The book is addressed to various

student groups: those in a bachelor's program studying business, economics and international trade can well use the book to gain a broad and current perspective on trends in international marketing theory and practice. Those in a master's program for business, economics and international trade can use the book as a guide for building a theoretical background for their term projects and the case studies they analyze. Those at the PhD level in the same or similar disciplines can take a compact look at 21st century international marketing. It is also beneficial for international students, for example, for Erasmus students at European universities, who are building a common international marketing background and perspective that they can take back to their studies at their home universities.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

EBOOK: International Marketing, 5e Taylor & Francis

It has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events. It is not that the facts of history have changed. No one will dispute that the battle of

Waterloo occurred on June 11, 1815 or that the allied invasion of Europe began on June 6, 1944. What each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual, social, intellectual, and cultural milieu of their own generation. By examining the facts of history from a new perspective, today's historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals. Although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns, inventory replenishment, and income statements, the goal of the management scientist, like the historian, is to merge the facts and figures of the discipline with today's organizational, cultural, and economic realities. Hopefully, the result will be a new synthesis, where a whole new perspective will break forth, exposing new directions and opportunities.
