Bullock, Haddow, and Coppola have set the standard for homeland

security textbooks, and they follow up best-selling third edition with this substantially improved version. As with its predecessor, the book clearly delineates the bedrock principles of preparing for, mitigating, managing, and recovering from emergencies and disasters. However, this new edition emphasizes their value with improved clarity and focus. What's more, it has been thoroughly revised to include changes that are based on transformations relevant to the political, budgetary, and legal aspects of homeland security that have changed since the 2008 Presidential election (and subsequent change in the administration). These include: new chapters on intelligence and counterterrorism, border security, transportation security, and cybersecurity; an expansion of material on the organization of the Department of Homeland Security; strategic and philosophical changes that are recommended and/or that have occurred as a result of the Quadrennial Homeland Security Review completed in 2010; updated budgetary information on both homeland security programs, and on the homeland security grants that have supported safety and security actions at the state and local levels, as well as in the private sector; and changes in the way the public perceives and receives information about security risk, including the possible elimination of the

Homeland Security Advisory System. * New chapter that focuses specifically on the border and transportation security missions * An increased focus on cyber security and infrastructure security, both of which are rapidly growing in importance in the homeland security field among officials at all levels * A companion website that includes a full online Instructor's Guide and PowerPoint Lecture Slides.

Since 1993, the Information Security Management Handbook has served not only as an everyday reference for information security practitioners but also as an important document for use by practitioners to conduct the intense review necessary to prepare for the Certified

Information System Security Professional (CISSP) examination. Preparing for the examination is a major effort because it requires a thorough understanding of the topics contained in the Common Body of Knowledge (CBK) for the field as specified in the Generally Accepted Systems Security Principles (GASSP). The handbook is one of the most important references used by candidates preparing for the exam. The Information Security Management Handbook maps the ten domains of the Common Body of Knowledge tested on the certification examination: access control issues and methodology, telecommunications and network security, security management practices, applications and systems development security, cryptography, security architecture and models, operations security, business continuity planning and disaster recovery planning, law, investigations, and ethics, and physical security. The Information Security Management Handbook is a "must have" book, whether you're preparing for the CISSP exam or need a comprehensive, up-to-date reference, or both.

The annual International Conference on Global Security, Safety and Sustainability (ICGS3) is an established platform in which security, safety and sustainability issues can be examined from several

global perspectives through dialogue between acad- ics, students, government representatives, chief executives, security professionals, and research scientists from the United Kingdom and from around the globe. The three-day conference focused on the challenges of complexity, rapid pace of change and risk/opportunity issues associated with modern products, systems, special events and infrastructures. The importance of adopting systematic and systemic - proaches to the assurance of these systems was emphasized within a special stream focused on strategic frameworks, architectures and human factors. The conference provided an opportunity for systems scientists, assurance researchers, owners, ope- tors and maintainers of large, complex and advanced systems and infrastructures to update their knowledge on the state of best practice in these challenging domains while networking with the leading researchers and solution providers. ICGS3 2010 received paper submissions from more than 17 different countries in all continents. Only 31 papers were selected and were presented as full papers. The program also included a number of keynote lectures by leading researchers, security professionals and government representatives.
