Forensic science evidence plays a pivotal role in modern criminal proceedings. Yet such evidence poses intense practical and theoretical challenges. It can be unreliable or misleading and has been associated with miscarriages of justice. In this original and insightful book, a global team of prominent scholars and practitioners explore the contemporary challenges of forensic science evidence and expert witness testimony from a variety of theoretical, practical and jurisdictional perspectives. Chapters encompass the institutional organisation of forensic science, its procedural regulation, evaluation and reform, and brim with comparative insight.

The second edition of *Forensic Toxicology: Principles and Concepts* takes the reader back to the origins of forensic toxicology providing an overview of the largely unchanging principles of the discipline. The text focuses on the major tenets in forensic toxicology, including an introduction to the discipline, principles of forensic toxicology including pharmacokinetics, pharmacodynamics, drug interactions and toxicogenomics, fundamentals of forensic toxicology analysis, types of interpretations based on analytical forensic toxicology results, and reporting from the laboratory to the courtroom. Also included in the second edition is a Unit focused on the forensic toxicology of individual drugs of abuse. Includes significant emphasis on the fundamental principles and concepts of forensic toxicology Provides students with an introduction to the core tenets of the discipline, focusing on the concepts, strategies, and methodologies utilized by professionals in the field Coauthored by a forensic toxicologist with over 40 years of experience as a professor who has taught graduate courses in forensic and analytical toxicology and who has served as a consultant and expert witness in civil and criminal cases

Every year throughout the world, individuals' health is damaged by their exposure to toxic chemicals at work. In most cases these problems will resolve, but many will sustain permanent damage. Whilst any justified claim for compensation requires medical and legal evidence a crucial and often controversial component of this process is the establishment of a causal link between the individual's condition and exposure to a specific chemical or substance. Causation, in terms of how a substance or substances led the claimant to his or her current plight, can be difficult to establish and the main purpose of this book, is to provide the aspiring expert report writer with a concise, practical guide that uses case histories to illuminate the process of establishing causation in occupational toxicity proceedings. In summary: A practical, accessible guide to the preparation of balanced, scientifically sound expert reports in the context of occupational toxicology. Focuses on the scientist's role in establishing a causal link between exposure to toxins and an individual's ill health. Includes real-life case histories drawn from the Author's 15 years experience in this area to illustrate

the principles involved. *Expert Report Writing in Toxicology: Forensic, Scientific and Legal Aspects* proves invaluable to scientists across a range of disciplines needing guidance as to what is expected of them in terms of the best use of their expertise and how to present their findings in a manner that is authoritative, balanced and informative.

Introduction to Forensic Sciences, Second Edition is the current edition of this bestselling introductory textbook. Dr. William Eckert, one of the world's foremost authorities in the area of forensic medicine, presents each of the distinct fields that collectively comprise the forensic sciences in a logical, relatively non-technical fashion. Each chapter is written by a well-known expert in his/her respective field, and each specialty area is thoroughly treated. When appropriate, the various methods of applying these sciences in different countries are covered. Heavily illustrated, the Second Edition has been updated to include current procedures and techniques that were not available or usefully developed when the first edition was published. Features include:

Courtroom Toxicology Academic Press

This is a handbook designed to help facilitate the training of FTDTL scientists in forensic toxicology expert testimony. The information presented is a compilation of many years of testifying as an expert witness, reading and researching information, listening to many experts, and through conversations with Cliff, Peter, Jacqueline, Susan, Harold, Zinora, Cynthia, Abel, Etta, Jason and Michael. As scientists we owe it to the judicial system to be scientifically correct and forensically sound.

Veterinary Forensics: Investigation, Evidence Collection, and Expert Testimony will provide anyone involved in an investigation of an animal involved crime or civil action with the knowledge and tools that can give guidance for their actions in completing a forensic investigation. All 50 U.S. states, and numerous countries around the world, have laws against animal abuse and cruelty. Law enforcement agents, veterinarians, the judiciary, attorneys and forensic scientists may be involved in cases of animal cruelty, neglect or human crimes that may have an animal element. Additionally, the animal can be the victim, suspect or in some instances the witness of a crime. Given that acquittal or conviction is dependent upon the nature and veracity of the evidence, the quality of the evidence in an animal-related crime investigation must be beyond reproach. The book begins with a discussion of animal abuse and crimes against animals, crime scene investigation, and, from there, discusses various types of forensic examinations of the animal, culminating in a review of the judicial system and testimony in a court of law. All contributing authors are practicing professionals in law, veterinary medicine, and the private sector who provide current, best-practice evidence collection and forensic techniques. Chapters provide in-depth detail about the forensic clinical examination and forensic necropsy of small and large animal species, forensic radiology, forensic toxicology, bite mark analysis and animal behavior. Various, relevant forensic disciplines such as bloodstain pattern analysis, DNA analysis, animal sexual abuse, agroterrorism, animal hoarding, ritual crimes against animals, and animal fighting are discussed. Key Features: Presents established and accepted police techniques in animal crime scene investigation including identification, documentation and packaging of physical evidence and scene photography and videography Includes essential techniques to collect and preserve biological and DNA evidence for animal DNA testing Review of the forensic clinical examination and forensic necropsy of small and large animals Provides methods of evidence presentation in the courtroom, the nature of court room testimony, and the development of an expert report Veterinary Forensics: Investigation, Evidence Collection, and Expert Testimony fills the void of applied, real-world investigative techniques for the collection and presentation of veterinary forensic medical and scientific information. It will be a welcome reference to both the student and professional in the understanding all relevant evidentiary,

investigative, and legal elements of the discipline.

As the world becomes more complex, a greater percentage of the present litigation is based upon very technical subjects. More and more chemicals are being introduced into our daily lives, without ever having been tested for possible side-effects. Consequently, product liability is increasing, and more and more often the toxicologist is being called into court to explain to judges and juries the concepts of technology and risk assessment. The Toxicologist As Expert Witness: A Hint Book for Courtroom Procedure is written with the toxicologist in mind who may not have the experience to testify at a time when toxicologists as expert witnesses are in great demand.

A Death at Camp David is a novel of political intrigue and murder mystery set against the backdrop of the election of a woman for president of the United States. Dr. Bob Kramer, a forensic toxicologist with the air and suave of a James Bond, is recruited to identify the cause of a woman's death. The body was found on the grounds of Camp David the morning after a White House-sponsored Fourth of July celebration. The woman attended the event as an impostor, a result of political dirty tricks. Morgan Baker, an obese and unkempt private investigator from Louisiana, is hired to sleuth and assist in the investigation. Unbeknownst to the president, her husband and the vice president, Eric Bunting, are lovers and are implicated in the death. But who was that woman? How did she die? Was she a woman? How will her death affect the upcoming presidential election of Jessica Worthing, who is running in her own right after the sudden death of her male predecessor, Leslie Breckenridge?

Drugs and poisons from a variety of sources have been used illegally for centuries and most conjure up an unfortunate, enduring fascination. People appear to be both attracted by them and at the same time repelled by them. As a forensic toxicologist, William Allender has been called to give expert witness evidence in a number of very high profile cases involving drug overdoses and poisons (including pesticides), in which those substances have been used in suicides and murder.

Toxicological Aspects of Drug-Facilitated Crimes provides readers with an overview of the field of DFC: its history, toxicological effects, analysis, interpretation of results, the roles that age, gender and race may play, and clinical presentations of these drugs. The most commonly used drugs in DFC are addressed (alcohol, cannabis, MDMA, and cocaine), as well as an emerging range of pharmaceuticals (benzodiazepines, hypnotics, sedatives, neuroleptics, histamine H1-antagonists, or anesthetics), which are becoming more widely used, but are more difficult to detect. Edited by a world-renowned expert in the field of Forensic and Analytical Toxicology, Pascal Kintz, this book investigates toxicants of emerging concern and brings together a number of experts in the field to address the most recent discoveries on DFC toxicology. Brings together the latest research on the toxicological analysis of drug-facilitated crimes (DFC), with real-life case studies Provides up-to-date analytical techniques for determining toxicity levels in blood, urine, and hair Covers all types of toxicants involved in DFC, including alcohol, cannabis, MDMA, and a wide variety of pharmaceuticals Forensic Science Evidence and Expert Witness Testimony Dorrance Publishing
