It is argued that when it comes to a choice between spore size and shape of basidia on the one hand, and the degree of

development of the veil on the other hand as leading characters in subdividing the genus Psathyrella into subgenera, spore size and shape of basidia are to be preferred because this directly leads to establishing the subgenus Psathyrella as a very natural group.

Notes on the genus Psathyrella - IV. Description of and key ...Psathyrella corrugis f. gracilis (Fr.) Enderle 1987

Psathyrella corrugis, is the type species of the basidiomycete fungus genus Psathyrella and family Psathyrellaceae. Originally described from Europe as "Agaricus corrugis" [1], the species is considered non-toxic but lacking in flavor and texture.
