Harley-Davidson FLH/FLT Touring Haynes Manuals N. America, Incorporated

A motorcycle's electrical system can be daunting to even the

most adept home mechanic. And yet, the more complex these systems become—and the more important to a motorcycle's function—the more useful, even critical, it will be to know something about them. That's where this book comes in with a user-friendly guide to understanding, diagnosing, and fixing the electrical systems and components that make a bike run . . . or falter. Veteran technician Tracy Martin explains the principles behind motorcycle electrical systems and how they work. He details the various tools, such as multimeters and test lights, that can be used to evaluate and troubleshoot any vehicle's electrical problem. And in several hands-on projects, he takes readers on a guided tour of their vehicle's electrical system, along the way giving clear, step-by-step instructions for diagnosing specific problems.

This book offers in-depth accounts of encounters between Chinese and African social and economic actors that have been increasing rapidly since the early 2000s. With a clear focus on social changes, be it quotidian behaviour or specific practices, the authors employ multi-disciplinary approaches in analysing the various impacts that the intensifying interaction between Chinese and Africans in their roles as ethnic and cultural others, entrepreneurial migrants, traders, employers, employees etc. have on local developments and transformations within the host societies, be they on the African continent or in China. The dynamics of social change addressed in case studies cover processes of social mobility through migration, adaptation of business practices, changing social norms, consumption patterns, labour relations and mutual perceptions, cultural brokerage, exclusion and inclusion, gendered experiences, and powerful imaginations of China. ?

Electric bikes (e-bikes) provide low-cost, convenient, and relatively energy-efficient transportation to an estimated 40 million–50 million people in the People's Republic of China (PRC), quickly becoming one of the dominant travel modes in the country. As e-bike use grows, concerns are rising about lead pollution from their batteries and emissions from their use of grid electricity, primarily generated by coal power plants. This report analyzes the environmental performance of e-bikes relative to other competing modes, their market potential, and the viability of alternative battery technologies. It also frames the role of e-bikes in the PRC's transportation system and recommends policy for decision makers in the PRC's central and municipal governments.
