*Writing DNP Clinical Case Narratives* Routledge  
With at least 40% new or updated content since the last edition, *Clinical Decision Support, 2nd Edition* explores the crucial new motivating factors poised to accelerate *Clinical Decision Support (CDS)* adoption. This book is mostly focused on the US perspective because of initiatives driving EHR adoption, the articulation of 'meaningful use', and new policy attention in process including the Office of the National Coordinator for Health Information Technology (ONC) and the Center for Medicare and Medicaid Services (CMS). A few chapters focus on the broader international perspective. *Clinical Decision Support, 2nd Edition* explores the technology, sources of knowledge, evolution of successful forms of CDS, and organizational and policy perspectives surrounding CDS. Exploring a roadmap for CDS, with all its efficacy benefits including reduced

errors, improved quality, and cost savings, as well as the still substantial roadblocks needed to be overcome by policy-makers, clinicians, and clinical informatics experts, the field is poised anew on the brink of broad adoption. *Clinical Decision Support, 2nd Edition* provides an updated and pragmatic view of the methodological processes and implementation considerations. This book also considers advanced technologies and architectures, standards, and cooperative activities needed on a societal basis for truly large-scale adoption. At least 40% updated, and seven new chapters since the previous edition, with the new and revised content focused on new opportunities and challenges for clinical decision support at point of care, given changes in science, technology, regulatory policy, and healthcare finance. Informs healthcare leaders and planners, health IT system developers, healthcare IT organization leaders and staff, clinical informatics professionals and researchers, and clinicians with an interest in the role of technology

in shaping healthcare of the future  
**Case Studies in Gerontology** Delmar Pub  
Created especially for nurses, the *Clinical Decision Making* series helps to bridge the gap between content knowledge and clinical application. *Case Studies in Maternity and Pediatric Nursing* provides 80 nursing case histories that include critical thinking questions and answers based on real-life client situations. Every case contains a blueprint of variables that must be considered while evaluating a particular scenario, and are pertinent concerning the client nursing protocol and setting of care. Examples of these variables include age, gender, cultural influences, pre-existing conditions, legal issues, or communication skills. Each blueprint and case is different just as each clinical situation is unique. By simulating the decision-making process, learners gain the confidence needed to make informed clinical judgments that will make them successful practitioners. Simply stated, *Clinical Decision Making* shortens the distance between theory

and practice like no other educational tool!

**CLINICAL DECISION MAKING: CASE STUDIES FOR THE OCCUPATIONAL THERAPY ASSISTANT** is a first of its kind text designed to help students, entry-level practitioners and professors work on fostering clinical reasoning skills in the provision of occupational therapy assistant

services. The case studies in this book incorporate the most common practice settings across the continuum of care and follow clients as they progress across this continuum. Organized broadly around the current Occupational Therapy Practice Framework of the American Occupational Therapy Association, each case contains examples of how this framework can be applied to a particular client. The case studies in this book are meant to provoke discussion among your students about treatment planning, ethical issues and collaboration with the client, family and other healthcare providers. This phenomenal new text focuses on assisting students in learning that there can be many possible choices in the clinical decision making process, and that these different choices can lead to many equally successful outcomes. *Case Studies Through the Health Care Continuum: A Workbook for the Occupational Therapy Student* is an entire book of case studies of adults with physical and psychological deficits. Each case study is followed by questions, organized around performance areas and performance components, treatment planning and discharge planning areas. The questions are designed to encourage clinical thinking about the cases. The cases encompass a variety of diagnoses and take place in a variety of health care arenas. By using case studies, students will begin to, and advance, their thinking process before directly dealing with clients. The cases are comprehensive and well thought out, and the questions provide a good starting point for

processing and guiding critical thinking. This exceptional text can be used in almost every course in the curriculum!

**Surgery** Delmar Pub  
Established as a staple reference in the EMG laboratory, *Clinical Electromyography: Nerve Conduction Studies* is now in its revised, updated Third Edition. Dr. Oh, a world-renowned authority, provides encyclopedic coverage of current nerve conduction techniques and their clinical uses. This edition's new chapter on special nerve conduction techniques describes studies such as motor unit number estimation and muscle fiber conduction velocity and discusses their clinical value and limitations. Coverage also includes new nerve conduction techniques and recent developments in electromyographic diagnosis of immunologically-mediated neuropathies, segmental demyelination, mild carpal tunnel syndrome, and neurogenic thoracic outlet syndrome. More than 500 illustrations complement the text.

This book is open access under a CC BY 4.0 license. This volume describes and explains the educational method of Case-Based Clinical Reasoning (CBCR) used successfully in medical schools to prepare students to think like doctors before they enter the clinical arena and become engaged in patient care. Although this approach poses the paradoxical problem of a

lack of clinical experience that is so essential for building proficiency in clinical reasoning, CBCR is built on the premise that solving clinical problems involves the ability to reason about disease processes. This requires knowledge of anatomy and the working and pathology of organ systems, as well as the ability to regard patient problems as patterns and compare them with instances of illness scripts of patients the clinician has seen in the past and stored in memory. CBCR stimulates the development of early, rudimentary illness scripts through elaboration and systematic discussion of the courses of action from the initial presentation of the patient to the final steps of clinical management. The book combines general backgrounds of clinical reasoning education and assessment with a detailed elaboration of the CBCR method for application in any medical curriculum, either as a mandatory or as an elective course. It consists of three parts: a general introduction to clinical reasoning education, application of the CBCR method, and cases that can be used by educators to

try out this method.

Reflecting the latest practices in the field, Clinical Decision Making: Case Studies in Medical-Surgical Nursing, 2nd edition bridges the gap between classroom knowledge and clinical application. Emphasizing holistic nursing care, this resource helps nursing students sharpen their critical thinking skills and gain experience applying what they have learned. The more than 40 medical-surgical case histories and related questions, and responses are based on real-life

client situations. This book takes a behavioural approach to examine six important housing questions: tenure decision, gentrification, place attachment, housing bubbles, housing

wealth, and residential satisfaction. Using experimental and field data, the book demonstrates the effects of six behavioural biases and heuristics (i.e., anchoring and reference dependence, loss aversion, mental accounting, endowment effect, herd behaviours, and social comparison) on these housing decisions. The first part of the book introduces the questions and provides a behavioural science toolbox before the second part adopts a real-world case study approach. Real data sets and suggested answers are provided, and the cases come from the UK, USA, and China. Background information is given in each case to facilitate the understanding of the case data and question, as well as the discussions on the results. This book is ideal supplementary reading on a variety of courses such as housing studies, economics, real estate, research methods, and for students and academics who are interested in the application of behavioural science in housing decisions.

Social work students consistently struggle to

apply theory to practice, or use the knowledge of textbooks and classrooms in the field. Vignettes and scenarios represented in textbooks are often simplistic, too tidy to be realistic, and with clean resolutions. *Next Steps: Decision Cases for Social Work Practice* highlights the complex, messy nature of social work practice in a way that is engaging to students, allowing them to step into the role of a practicing social worker. This book is a collection of decision cases from multiple areas of social work practice, designed to enhance the quality and depth of classroom case discussion and analysis. These realistic, compelling cases present dilemmas about which even experienced practitioners may disagree. This allows rich classroom discussion that enhances critical thinking, provides real-life application, and creates numerous opportunities to apply content and knowledge acquired throughout a social work education experience.
