NIST SP 800-154 March 2016 Threat modeling is a form of risk assessment that models aspects of the attack and defense sides of a particular logical entity, such as a piece of data, an application, a host, a system, or an environment. This publication examines data-centric system threat modeling, which is threat modeling that is focused on protecting particular types of data within systems. The publication provides information on the basics of data-centric system threat modeling so that organizations can successfully use it as part of their risk management processes. The general methodology provided by the publication is not intended to replace existing methodologies, but rather to define fundamental principles that should be part of any sound data-centric system threat modeling methodology. Why buy a book you can download for free? First you gotta find it and make sure it's the latest version (not always easy). Then you gotta print it using a network

printer you share with 100 other people - and its outta paper - and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid \$75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than \$10 an hour and use an ink jet printer, buying this book will save you money. It's much more cost-effective to just order the latest version from Amazon.com This book is published by 4th Watch Books and includes copyright material. Built from 1951 to 2000, BMC's A-Series engine was a remarkably successful, versatile and invaluable power unit that far outlived its original projected life. Not only did it power road cars as varied as the Austin A30, the Mini and the MG Midget, but it also found use in world-class race and rally cars, record-breaking special machines, light commercial vehicles and even tractors. This fascinating illustrated book chronicles the full history and achievements of this remarkable engine, nearly 15 million of which were made.

*Refinement of Production Engines and New Control Strategies* Wadsworth Publishing

2008 Outstanding Academic Title, Choice Magazine From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

It is a little known fact that reading was taught by means of spelling for over 200 years. Today the impact of spelling on reading achievement is not as well appreciated as it once was. The late Dr. Ronald P. Carver did extensive research into the causal relationships between spelling instruction and reading ability. Carver concluded, "One very important way to learn how to pronounce more words accurately is sometimes overlooked, that is, learning to spell more words accurately." (Causes of High and Low Reading Achievement, p. 178). He also notes that "spelling was used to teach reading for almost 200 years, but by the beginning of the 20th century, the tide had so turned that learning to spell was largely seen as incidental to learning to read." Quoting C. A. Perfetti, Carver observed, "practice at spelling should help reading more than practice of reading helps spelling." (p. 179. In June of 2004 Miss Geraldine Rodgers sent me her essay, "Why Noah Webster's Way Was the Right Way." She argued from the history of reading and the psychology of reading that Webster's spelling book method of teaching reading and spelling was superior to all other methods. I was surprised to learn that that Webster, in his 1828 American Dictionary of the English Language, defined a Spelling Book as, "A book for teaching children to spell and read." He also wrote under the entry, Spelling, "To tell the name of letters of a word, with a proper division of syllables, for the purpose of learning the pronunciation. In this manner children learn to read by first spelling the words." You can see that Webster was quite clear about the dual purpose of the spelling books in his day. You can imagine my surprise at the improvement I began to get with my tutoring students when they started working through Webster's Spelling Book. I decided to type up my own edition to use in my private tutoring and my tutoring work at the Odessa Christian School in Odessa, TX, where I teach remedial reading and Spanish. In this edition, I have retained everything in the original 1908 (descendant from the 1829 edition). The only differences relate to formatting. I chose to list the words in rows instead of columns. I also allow the words to divide at the ends of lines. I have found that this works fine for all students. We are teaching students to read and spell by syllables and not by word shapes or context. When reading and spelling are taught by the Spelling Book Method, all guessing at words from shape or context is completely eliminated. The student's total focus is on pronouncing the words correctly, high levels of comprehension are a natural result.

The recent revolution in molecular biology offers exciting new opportunities for targeted radionuclide therapy. This up-to-date, comprehensive book, written by world-renowned experts, discusses the basic principles of radionuclide therapy, explores in detail the available treatments, explains the regulatory requirements, and examines likely future developments. The full range of clinical applications is considered, including thyroid cancer, hematological malignancies, brain tumors, liver cancer, bone and joint disease, and neuroendocrine tumors. The combination of theoretical background and practical information will provide the reader with all the knowledge required to administer radionuclide therapy safely and effectively in the individual patient. Careful attention is also paid to the role of the therapeutic nuclear physician in coordinating a diverse multidisciplinary team, which is central to the safe provision of treatment.

*Specificity of Proteolysis* UBC Press

Specificity of Proteolysis presents a survey and conclusions on the action or proteinases - enzymes which are cleaving proteins or peptides. The specificity of proteinases which is determined as the sequence of amino acids at the cleavage site of a substrate, is an important criteria to choose an enzyme as tool in protein research. Whenever one is looking for an enzyme to act at a defined site or to give defined cleavage products one will find comprehensive information in this work. Comprehensive information about more than 280 endopeptidases which are based on the database LYSIS including a calculation program to determine cleavage sites, is given in the book.

Based on three years of ethnographic research in the Yukon, this book examines contemporary efforts to restructure the relationship between aboriginal peoples and the state in Canada. Although it is widely held that land claims and co-management – two of the most visible and celebrated elements of this restructuring – will help reverse centuries of inequity, this book challenges this conventional wisdom, arguing that land claims and co-management may be less empowering for First Nation peoples than is often supposed. The book examines the complex relationship between the people of Klwane First Nation, the land and animals, and the state. It shows that Klwane human-animal relations are at least partially incompatible with Euro-Canadian notions of “property” and “knowledge.” Yet, these concepts form the conceptual basis for land claims and co-management, respectively. As a result, these processes necessarily end up taking for granted – and so helping to reproduce – existing power relations. First Nation peoples’ participation in land claim negotiations and co-management have forced them – at least in some contexts – to adopt Euro-Canadian perspectives toward the land and animals. They have been forced to develop bureaucratic infrastructures for interfacing with the state, and they have had to become bureaucrats themselves, learning to speak and act in uncharacteristic ways. Thus, land claims and co-management have helped undermine the very way of life they are supposed to be protecting. This book speaks to critical issues in contemporary anthropology, First Nation law, and resource management. It moves beyond conventional models of colonialism, in which the state is treated as a monolithic entity, and instead explores how “state power” is reproduced through everyday bureaucratic practices – including struggles over the production and use of knowledge.
