A Concise Introduction Routledge

An Introduction to Population Geographies provides a foundation to the incredibly diverse, topical and interesting field of twenty-first-century population geography. It establishes the substantive concerns of the subdiscipline, acknowledges the sheer diversity of its approaches, key concepts and theories and engages with the resulting major areas of academic debate that stem from this richness. Written in an accessible style and assuming little prior

knowledge of topics covered, yet drawing on a wide range of diverse academic literature, the book's particular originality comes from its extended definition of population geography that locates it firmly within the multiple geographies of the life course. Consequently, issues such as childhood and adulthood, family dynamics, ageing, everyday mobilities, morbidity and differential ability assume a prominent place alongside the classic population geography triumvirate of births, migrations and deaths. This broader framing of the field allows the book to address more holistically aspects of lives across space often provided little attention in current textbooks. Particular note is given to how these lives are shaped through hybrid social, biological and individual arenas of differential life course experience. By engaging with traditional quantitative perspectives and newer qualitative insights, the authors engage students from the quantitative macro scale of population to the micro individual scale. Aimed at higher-level undergraduate and graduate students, this introductory text provides a well-developed pedagogy, including case studies that illustrate theory, concepts and issues.

In the second edition of *An Introduction to the Geography of*

Health, Helen Hazen and Peter Anthamatten explore the ways in which geographic ideas and approaches can inform our understanding of health. The book's focus on a broad range of physical and social factors that drive health in places and spaces offers students and scholars an important holistic perspective on the study of health in the modern era. In this edition, the authors have restructured the book to emphasize the theoretical significance of ecological and social approaches to health. Spatial methods are now reinforced throughout the book, and other qualitative and quantitative methods are discussed in greater depth. Data and examples are used extensively to illustrate key points and have been updated throughout, including several new extended case studies such as water contamination in Flint, Michigan; microplastics pollution; West Africa's Ebola crisis; and the Zika epidemic. The book contains more than one hundred figures, including new and updated maps, data graphics, and photos. The book is designed to be used as the core text for a health geography course for undergraduate and lower-level graduate students and is relevant to students of biology, medicine, entomology, social science, urban planning, and public health.

Places and traces Routledge

This book explores the urban, political, and economic effects of contemporary capitalism as well as being concerned with a collective analytic that addresses these processes through the lens of disassembling and reassembling dynamics. The processes of contemporary globalization have resulted in the commodification of various dimensions that were previously the domain of state action. This book evaluates the varying international responses from communities as they cope and confront the negative impacts of neoliberalism. In-depth case studies from scholars working in Europe, Latin America, Africa, and Asia showcase how various cities are responding to the effects of neoliberalism. Chapters investigate and demonstrate how the neoliberal processes of disassembling are being countered by positive and engaged efforts of reassembly. From Colombia to Siberia, Chicago to Nigeria, contributions engage with key economic and urban questions surrounding the militarization of state, democracy, the rise of the global capital and the education of young people in slums. This book will have a broad appeal to academic researchers and urban planning professionals. It is recommended core reading for students in Urban Planning, Geography, Sociology, Anthropology, and Urban Studies.

An Introduction Routledge

'Human Geography' examines the major trends, debates, research and conceptual evolution of human geography during the twentieth century. Considering each of the subject's primary subfields in turn, it addresses developments in both continental European and Anglo-American geography, providing a cutting-edge evaluation of each. Written clearly and accessibly by leading researchers, the book combines historical astuteness with personal insights and draws on a range of theoretical positions. A central theme of the book is the relative decline of the traditional subdisciplines towards the end of the twentieth century, and the continuing movement towards interdisciplinarity in which the various strands of human geography are seen as inextricably linked. This stimulating and exciting new book provides a unique insight into the study of geography during the twentieth century, and is essential reading for anyone studying the history and philosophy of the subject.

An Essential Introduction Routledge

The early modern map has come to mark the threshold of modernity, cutting through the layered customs of Medieval parochialism with its clean, expansive geometries. Re-thinking the role played by mathematics and cartography in the English seventeenth century, this book argues that the cultural currency of mathematics was as unstable in the period as that of England's controversial enclosures and plantations. Reviewing evidence from a wide range of literary and scientific, courtly and pragmatic texts, Edwards suggests that its unstable currency rendered mathematics necessarily rhetorical: subject to constant re-negotiation. Yet he also finds a powerful flexibility in this weakness. Mathematized texts from masques to maps negotiated a contemporary ambivalence between Calvinist asceticism and humanist engagement. Their authors promoted themselves as artful guides between virtue and profit; the study and the marketplace. This multi-disciplinary work will be of interest to all disciplines affected by the recent 'spatial turn' in early modern cultural studies, and particularly to students and researchers in literature, history and geography.

The sites, spaces and subjects of reproduction are distinctly geographical. Reproductive geographies span different scales - body, home, local, national, global - and movements across space. This book expands our understanding of the socio-cultural and spatial aspects of fertility, pregnancy and birth. The chapters directly address global perspectives, the future of reproductive politics and state-focused approaches to the politicisation of fertility, pregnancy and birth. The book provides up-to-date explorations on the changing landscapes of reproduction, including the expansion of reproductive technologies, such as surrogacy and intrauterine insemination. Contributions in this book focus on phenomenologically-inspired accounts of women's lived experience of pregnancy and birth, the biopolitics of birth and citizenship, the material histories of reproductive tissues as "scientific objects" and engagements with public health and development policy. This is an essential resource for upper-level undergraduates and graduates studying topics such as Sociology, Geographies of Gender, Women's Studies and Anthropology of Health and Medicine.

Introducing Social Geographies Pearson Higher Ed

Contested Worlds provides an introduction both to a multitude of geographical worlds which are currently being actively constructed and contested, and to a range of different perspectives on these worlds being adopted and contested by geographers. It is unique in its focus on the role of contestation in both the construction of geographical studies and in the geographies these studies seek to address. These issues are explored through a combination of general theoretical discussion and detailed international case studies. The areas discussed range in scale from the global, through the regional and national to the local worlds of the inner city, the neighbourhood and the village, with connections drawn between these scales. The book concludes that geography is being made in quite different ways. It asserts that geography is intrinsically a contested enterprise, and that this should be embraced as part of geographers becoming more critically involved in the making, and studying, of new contemporary human geographies.

Routledge

This volume tackles the complex terrain of theory and methods, seeking to exemplify the major philosophical, social-theoretic and methodological developments - some with clear political and ethical implications - that have traversed human geography since the era of the 1960s when spatial science came to the fore.

Coverage includes Marxist and humanistic geographies, and their many variations over the years, as well as ongoing debates about agency-structure and the concepts of time, space, place and

scale. Feminist and other 'positioned' geographies, alongside poststructuralist and posthumanist geographies, are all evidenced, as well as writings that push against the very 'limits' of what human geography has embraced over these fifty plus years. The volume combines readings that are well-known and widely accepted as 'classic', with readings that, while less familiar, are valuable in how they illustrate different possibilities for theory and method within the discipline. The volume also includes a substantial introduction by the editor, contextualising the readings, and in the process providing a new interpretation of the last half-century of change within the thoughts and practices of human geography.
