Recipes for mouthwatering desserts with minimal refined sugar from the James Beard Award-winning pastry chef and author of Flour. Trust Joanne Chang—beloved author of the bestselling Flour and a Harvard math major to boot—to come up with this winning formula: minus the sugar = plus the flavor. The sixty-plus recipes here are an eye-opener for anyone who loves to bake and wants to cut back on the sugar. Joanne warmly shares her secrets for playing up delicious ingredients and using natural sweeteners, such as honey, maple syrup, and fruit juice. In addition to entirely new go-to recipes, she's also revisited classics from Flour and her lines-out-the-door bakeries to feature minimal refined sugar. More than forty mouthwatering photographs beautifully illustrate these revolutionary recipes, making this a must-have book for bakers of all skill levels.

Technological systems become organized by commands from outside, as when human intentions lead to the building of structures or machines. But many natural systems become structured by their own internal processes: these are the self-organizing systems, and the emergence of order within them is a complex phenomenon that intrigues scientists from all disciplines. Unfortunately, complexity is ill-defined. Global explanatory constructs, such as cybernetics or general systems theory, which were intended to cope with complexity, produced instead a grandiosity that has now, mercifully, run its course and died. Most of us have become wary of proposals for an "integrated, systems approach" to complex matters; yet we must come to grips with complexity some how. Now is a good time to reexamine complex systems to determine whether or not various scientific specialties can discover common principles or properties in them. If they do, then a fresh, multidisciplinary attack on the difficulties would be a valid scientific task. Believing that complexity is a proper scientific issue, and that self-organizing systems are the foremost example, R. Tomovic, Z. Damjanovic, and I arranged a conference (August 26-September 1, 1979) in Dubrovnik, Yugoslavia, to address self-organizing systems. We invited 30 participants from seven countries. Included were biologists, geologists, physicists, chemists, mathematicians, bio-physicists, and control engineers. Participants were asked not to bring manuscripts, but, rather, to present positions on an assigned topic. Any writing would be done after the conference, when the writers could benefit from their experiences there.

If you summon this demon, he's guaranteed to come! With a killer succubus leaving a trail of desiccated corpses, Detective Lars Thornsson of the Paranormal Enforcement Agency knows he shouldn't be falling for a suspect. But a hot little piece of demon tail like Rael is impossible to resist. Slender, snake-hipped, and dark skinned, he swears he's innocent — of murder, at least. Rael is delighted when a summoning brings him up to Earth, filled as it is with hot guys walking around like an all-you-can-eat buffet. He's not so happy about the mean old detectives interrupting him halfway through his dinner — but he changes his mind after getting an eyeful of Lars's muscular, Nordic charms. Now Rael has a vested interest in keeping Lars safe from the real killer, even if that means putting himself into the killer's path.
