For patients and their loved ones, no care
decisions are more profound than those
made near the end of life. Unfortunately,
the experience of dying in the United

States is often characterized by
fragmented care, inadequate treatment of
distressing symptoms, frequent transitions
among care settings, and enormous care
responsibilities for families. According to
this report, the current health care system
of rendering more intensive services than

are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations,

researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

The ubiquity of computation in daily life has had decisive influence on the imaginative aspects of tourism. Online knowledge of the world is readily available through mapping services, social media, travel blogs, and online reviews. From booking and Googling, to posting and reminiscing: all stages of one's trip can be guided and augmented by increasingly connective, personalized, and optimized algorithmic systems. In the face of this informational abundance, hypermediated tourism is fixated on access to authenticity. Peer to peer accommodation offers tourists a chance to "live like a local." Professional bloggers instruct not just on where, but on how to travel. Review websites aggregate the feedback of millions into "objective," data-driven authentication of destinations. And virtual technologies take users to places they could not dream of reaching physically.

Based on a comparative ethnography of touristic blogs and vlogs, review websites, and video game environments, Scripted Journeys presents a critical analysis of touristic practice in digital ecologies. This hypermediated tourism engages technology as a harbinger of self-possession and waywardness, yet produces its own forms of digital dependence. The resulting "scripted journeys" internalize a tension between authenticity as autonomy and control, and the implicit compliance of making use of technological extensions.

This book provides a current perspective on alcohol and aging to better understand the trends, costs, benefits, and clinical and community evidenced-based strategies. This book embraces not only the physical, cognitive, psychological, and social health benefits of moderate drinking in the elderly, it also delves into the risks of excessive drinking, including physical and psychiatric morbidity, neurodegeneration, medication complications, and accidents

and injuries, and loss of independence. Written by experts in the field, this book is the only current text that includes the most current scientific, research, empirical, and practice information alongside a comprehensive review of the status of the field that will help guide alcohol use management and stimulate future research. Alcohol and Aging is the ultimate resource for all researchers, educators, clinicians, and professionals working with older adults who drink. Containing a Full Alphabetical Vocabulary of the Language, with a Preliminary Exposition of English Orthoëpy and Orthography, and Designed as a Work of Reference for General Use, and as a Text-book in Schools Saunders Limited

Clinical examination is a fundamental part of the process of veterinary diagnosis. Without a proficient clinical examination and an accurate diagnosis it is unlikely that the treatment, control, prognosis and welfare of animals will be optimised. This book will assist veterinary students in their understanding of farm animal clinical examination and act as a quick reference for clinicians who are called upon to examine an unfamiliar species. It will

also provide a more detailed account for experienced clinicians in their continuing professional development. The authors provide a simple, explicit and reliable method of examining cattle, sheep, pigs and goats of all ages in the search for diagnostic information.

"While much has been written about the role of caregiving for the elderly and chronically ill and for children with special needs, little is known about "military caregivers" -- the population of those who care for wounded, ill, and injured military personnel and veterans. These caregivers play an essential role in caring for injured or wounded service members and veterans. This enables those for whom they are caring to live better quality lives, and can result in faster and improved rehabilitation and recovery. Yet playing this role can impose a substantial physical, emotional, and financial toll on caregivers. This report summarizes the results of a study designed to describe the magnitude of military caregiving in the United States today, as well as to identify gaps in the array of programs, policies, and initiatives

designed to support military caregivers. Improving military caregivers' well-being and ensuring their continued ability to provide care will require multifaceted approaches to reducing the current burdens caregiving may impose, and bolstering their ability to serve as caregivers more effectively. Given the systematic differences among military caregiver groups, it is also important that tailored approaches meet the unique needs and characteristics of post-9/11 caregivers."--Abstract

When deal-making seasoned American turned British banker Christopher Coleman agrees to an open marriage with Lindsay Mitchell, a stunningly beautiful early forties member of morally troubled twenty-first century London society, he is ill-prepared to cope with the jealousies

and often alternative sexual pleasures that inevitably envelope their fast moving transatlantic life. Leading a life of luxury in London, England and on the stunningly beautiful islands of Florida's Gulf Coast Keys, Christopher and Lindsay fall into each others arms after years of changing sexual partners, failed relationships and a near fatal divorce and form an enormously successful business and personal partnership challenged only by the men and women and financial deals that seem to flock to them like bees to honey. The story begins when their twenty-first century open marriage is at its sexual pinnacle and filled with lonely, sexually starved wives and prowling lusty husbands. It then goes back in time to their youthful sexual adventures and misadventures to return to the sex and deal filled life they lead today. The novel ends in the deal and sexual experience of a lifetime involving youthful and current sexual partners and most importantly a man who nearly causes their marriage to collapse, the Oxford University educated Robert Foot who is Client Rouge and Chief Running Horse of the resource rich North American Indian tribe, the Redfoot Nation.

Community-based participatory research (CBPR) emerged in response to the longstanding tradition of "top-down" research-studies in which social scientists observe social phenomena and community problems as outsiders, separate from the participants' daily lives. CBPR is more immersive, fostering partnerships between academic and community organizations that increase the value and consequence of the research for all partners. The current perspectives gleaned from this school of research have been wildly well-

received, in no small part because they address the complexity of the human experience in their conclusions.

HANDBOOK OF COMMUNITY-BASED PARTICIPATORY RESEARCH codifies the methods and theories of this research approach and articulates an expansive vision of health that includes gender equality, safe and adequate housing, and freedom from violence. Topic-based chapters apply the theory and methods of CBPR to real world problems affecting women, ethnic and racial minorities, and immigrant communities such as sexual violence, exposure to environmental toxins, and lack of access to preventive care as well as suggesting future directions for effective, culturally sensitive research. HANDBOOK OF COMMUNITY-BASED PARTICIPATORY RESEARCH is required reading for academics, policy makers, and students seeking meaningful social change through scholarship.

The Royal Marsden Manual of Clinical Nursing Procedures Wizards of the Coast For a thorough comprehension of the field of geophysics, we need to understand its origins. Basic Geophysics by Enders Robinson and Dean Clark takes us on a journey that demonstrates how the achievements of our predecessors have paved the way for our modern science. From the ancient Greeks through the Enlightenment to the greats of the contemporary age, the reasoning behind basic principles is explored and clarified. With that foundation, several advanced topics are examined, including: the 3D wave equation; ray tracing and seismic modeling; reflection, refraction, and diffraction; and WKB migration. The successful integration of the historical narrative alongside practical analysis of relevant principles makes this book an excellent resource for both novices and professionals, and all readers will gain insight and appreciation for the seismic theory that underlies modern exploration

seismology.
