**Congressional Record** PIANC  
"Breaching the Marianas" by John C. Chapin is a book about the WWII campaigns and Marine Corps history. The book gives a detailed account of what happened on the Mariana Islands of Saipan during the war. Excerpt:  
"Breaching the Marianas: The Battle for Saipan by Captain John C. Chapin, USMCR (Ret) It was a brutal day. At first

light on 15 June 1944, the Navy fire support ships of the task force lying off Saipan Island increased their previous days' preparatory fires involving all calibers of weapons. At 0542, Vice Admiral Richmond Kelly Turner ordered, "Land the landing force." Around 0700, the landing ships, tank (LSTs) moved to within approximately 1,250 yards behind the line of departure. Troops in the LSTs began debarking from them in landing vehicles, tracked (LVTs). Control vessels containing Navy and Marine personnel with their radio gear took their positions

displaying flags indicating which beach approaches they controlled."

**Ships' Routeing** Elsevier

U.S. Navy Lieutenant Commander Clint Walker is on the run across the icy Alaskan Bering Sea. The Chinese operatives tracking him will do anything to retrieve the stolen military plans in Clint's possession--and kill him for their trouble. Desperate to safeguard the documents, he stows aboard a cargo ship--and comes face to face with the most beautiful--and determined--ship's commander he's ever encountered... Captain Samantha Richardson won't let anything--or anyone--stand in the way of her career...especially now with her whole future riding on this latest run. Yet the sight of her brash stowaway's enticing bedroom eyes and his hard,

muscular body has Sam fantasizing about indulging in a small indiscretion, just this once. After all, Clint Walker is her ideal man: hot, intriguing, and temporary. But when Clint and Sam give in to their simmering passion, they emerge to face an exploding danger that threatens to put an all too permanent end to their growing feelings...and their lives.

#### *Fairplay* Imo

This book is the first general treatment of Canadian maritime law to be published since 1916. This comprehensive text covers the whole of modern shipping law, including admiralty jurisdiction and procedure; ownership of ships; maritime mortgage and liens; insurance; carriage of goods; environmental issues; and limitation of

liability.

#### **The Pennsylvania School Journal**

Oxford University Press, USA

From the sinking of the British passenger liner Athenia on September 3, 1939, by a German U-boat (against orders) to the Japanese surrender on board the Missouri on September 2, 1945, *War at Sea* covers every major naval battle of World War II. "A first-rate work and the best history of its kind yet written".--Vice Admiral William P. Mack, U.S.N. (Ret.). 30 photos.

IBC = International code for the construction and equipment of ships carrying dangerous chemicals in bulk  
Pacific Ports Penguin

An ILO code of practice

*IBC Code* PIANC

The International Maritime Dangerous Goods Code is the standard guide to all aspects of handling dangerous goods and marine pollutants in sea transport. The Code lays down basic principles: detailed recommendations for individual substances, materials and articles, and a number of recommendations for good operational practice, including advice on terminology, packing, labelling, stowage, segregation and handling, and emergency response action. The Code has undergone many changes over the years, in both format and content, in order to keep up with the rapid expansion of the shipping industry. Amendment 40-20 includes revisions to various sections of the Code and to transport requirements for specific substances. It is mandatory as from 1

June 2022 but may be applied by Administrations in whole or in part on a voluntary basis from 1 January 2021 *The Congressional Globe* Stationery Office Books (TSO)

The Maritime Engineering Reference Book is a one-stop source for engineers involved in marine engineering and naval architecture. In this essential reference, Anthony F. Molland has brought together the work of a number of the world's leading writers in the field to create an inclusive volume for a wide audience of marine engineers, naval architects and those involved in marine operations, insurance and other related fields. Coverage ranges from the basics to more advanced topics in ship design, construction and operation. All the key areas are covered, including ship

flotation and stability, ship structures, propulsion, seakeeping and maneuvering. The marine environment and maritime safety are explored as well as new technologies, such as computer aided ship design and remotely operated vehicles (ROVs). Facts, figures and data from world-leading experts makes this an invaluable ready-reference for those involved in the field of maritime engineering. Professor A.F. Molland, BSc, MSc, PhD, CEng, FRINA. is Emeritus Professor of Ship Design at the University of Southampton, UK. He has lectured ship design and operation for many years. He has carried out extensive research and published widely on ship design and various aspects of ship hydrodynamics. \* A comprehensive overview from best-selling authors

including Bryan Barrass, Rawson and Tupper, and David Eyres\* Covers basic and advanced material on marine engineering and Naval Architecture topics\* Have key facts, figures and data to hand in one complete reference book *Code of Safe Working Practices for Merchant Seafarers* International Labour Organization

This is the 15th annual edition of the *Bibliography of Nautical Books*, a reference guide to over 14,000 nautical publications. It deals specifically with the year 2000.

**Pennsylvania School Journal** World Health Organization

In the last few years, the quantity of books and papers on the political, economic and legal problems of the exploration and use of the sea and

marine resources has considerably increased. But the status and activities of international organizations related to maritime shipping, fisheries, scientific research in the World Ocean and the protection of the marine environment have not yet, as a whole, been represented in the scientific and reference literature. It would be fair, though, to mention that some general information on marine international organizations may be found in the Yearbook of International Organizations, Brussels, 1979; in Annotated Acronyms and Abbreviations of Marine Science Related International Organizations, U. S. Department of Commerce, 1976; and in the UN Annotated Directory of Intergovernmental Organizations Concerned with Ocean Affairs, 1976.

Voluminous information on organizations engaged in problems of the exploration and use of the sea is given in International Marine Organizations by the well-known Polish scientists Lopuski and Symonides, 1978. Meanwhile the increasing volume of practical work related to the participation of governmental and scientific bodies as well as individual scientists and specialists in these organizations, the necessity of long-term planning in this field, and the perspectives of the development of these organizations, make necessary a special publication depicting the structure and many-sided activities of such international bodies. This book is the first one in which the most complete information on the main marine international organizations is

presented.
