## HANEY BRYCE

**Naval Aviation News** McGraw Hill Professional

Airline pilots are looked upon as leaders by passengers, crew, and employers alike. Newly hired pilots, as well as current pilots upgrading to become Captains, are required to have training, experience, and skills that demonstrate practical leadership and professionalism. Beyond accumulated experience in the flight deck, pilots need straightforward guidance on how to fulfill the role of pilot-in-command. Pilots know that when things go wrong, everyone looks to the captain--the pilot-in-command to make things right. *Pilots In Command: Your Best Trip, Every Trip* goes beyond what is required by flight training curricula, into what is both a fills a rarity and a necessity: solid advice to student and professional aviators about how to be transformational leaders. This second edition includes new discussions on professionalism and safety for today's airline operations. Focusing on a range of topics that all tie into the application of basic leadership skills, the author covers crew roles, crew briefings, flight attendants, crew resource management (CRM), threat and error management (TEM), ground services, dispatch, customer service, abnormal and emergency situations, layovers, crew dynamics, 14 CFR Part 117 rest rules, safety, and a new model of transformational leadership and professionalism for pilots. Especially relevant for new airline pilots and Captain upgrade candidates, *Pilots In Command* shares the insights and techniques typically gained only from years of experience and interaction with your fellow pilots and crew at 35,000 feet.

Discusses how to plan a staff ride of a battlefield, such as a Civil War battlefield, as part of military training. This brochure demonstrates how a staff ride can be made available to military leaders throughout the Army, not just those in the formal education system.

**Airways** John Wiley & Sons

Human error is implicated in nearly all aviation accidents, yet most investigation and prevention programs are not designed around any theoretical framework of human error. Appropriate for all levels of expertise, the book provides the knowledge and tools required to conduct a human error analysis of accidents, regardless of operational setting (i.e. military, commercial, or general aviation). The book contains a complete description of the Human Factors Analysis and Classification System (HFACS), which incorporates James Reason's model of latent and active failures as a foundation. Widely disseminated among military and civilian organizations, HFACS encompasses all aspects of human error, including the conditions of operators and elements of supervisory and organizational failure. It attracts a very broad readership. Specifically, the book serves as the main textbook for a course in aviation accident investigation taught by one of the authors at the University of Illinois. This book will also be used in courses designed for military safety officers and flight surgeons in the U.S. Navy, Army and the Canadian Defense Force, who currently utilize the HFACS system during aviation accident investigations. Additionally, the book has been incorporated into the popular workshop on accident analysis and prevention provided by the authors at several professional conferences world-wide. The book is also targeted for students attending Embry-Riddle Aeronautical University which has satellite campuses throughout the world and offers a course in human factors accident investigation for many of its majors. In addition, the book will be incorporated into courses offered by Transportation Safety International and the Southern California Safety Institute. Finally, this book serves as an excellent reference guide for many safety professionals and investigators already in the field.

*Breaking the Trust Barrier* McGraw Hill Professional

Essays written by the class of 1959 to the class of 2009 imparting fifty years worth of lessons learned through experience.

*Advanced Qualification Program* DIANE Publishing

*Redefining Airmanship* offers the first concrete model of the abstract ideal of "airmanship," and gives the reader step-by-step guidance for self-appraisal and improvement in the areas of flight proficiency, teamwork, and good judgment in crisis situations. The author, Major Tony Kern, draws on his extensive flight and crew-training experience in the U.S. Air Force, but his model is invaluable for all pilots, whether military, recreational, or commercial. "Kern's work is a breakthrough, and a benchmark." --John J. Nance, author of *Blind Trust*

Aircraft Command Techniques: Gaining Leadership Skills to Fly the Left SeatRoutledge

**Air University Review** Lulu.com

In the pantheon of air power spokesmen, Giulio Douhet holds center stage. His writings, more often cited than perhaps actually read, appear as excerpts and aphorisms in the writings of numerous other air power spokesmen, advocates-and critics. Though a highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest. In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh "Boom" Trenchard of Great Britain and William "Billy" Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book, published in 1921. Readers may well find much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet's central vision--that command of the air is all important in modern warfare--has been proven throughout the history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq.

ADP 6-22 describes enduring concepts of leadership through the core competencies and attributes required of leaders of all cohorts and all organizations, regardless of mission or setting. These principles reflect decades of experience and validated scientific knowledge. An ideal Army leader serves as a role model through strong intellect, physical presence, professional competence, and moral character. An Army leader is able and willing to act decisively, within superior leaders' intent and purpose, and in the organization's best interests. Army leaders recognize that organizations, built on mutual trust and confidence, accomplish missions. Every member of the Army, military or civilian, is part of a team and functions in the role of leader and subordinate. Being a good subordinate is part of being an effective leader. Leaders do not just lead subordinates--they also lead other leaders. Leaders are not limited to just those designated by position, rank, or authority.

Build Extraordinary Trust and Lead Your Team to a Higher Plane For former US Air Force Thunderbirds' commander and demonstration leader JV Venable, inspiring teamwork was literally a matter of life and death. On maneuvers like the one pictured on the cover, the distance between jets was just eighteen inches. Closing the gaps to sustain that kind of separation requires the highest levels of trust. On the ground or in the air, from line supervisor to CEO, we all face the same challenge. Our job is to entice those we lead to close the gaps that slow the whole team down--gaps in commitment, loyalty, and trust. Every bit of closure requires your people to let go of biases and mental safeguards that hold them back. The process the Thunderbirds use to break that barrier and craft the highest levels of trust on a team with an annual turnover of 50 percent is nothing short of phenomenal. That process is packaged here with tips and compelling stories that will help you build the team of a lifetime.

As a technical organization, charged with performing groundbreaking and pathfinding challenges on a daily basis, NASA has long valued the role of its Chief Engineers and Lead Systems Engineers. Although it takes a team to accomplish our missions and no members are unimportant, the Chief Engineers and Lead Systems Engineers who we look to lead our technical teams are critical to the success of our endeavors. It is this corps of dedicated, experienced, and passionate problem solvers and leaders who battle the technical headwinds that face every project, finding often hidden solutions and overcoming seemingly insurmountable obstacles to create paths to success. Furthermore, it is that indomitable spirit of ingenuity and perseverance that defines the Agency. Developing our Chief Engineers and Lead Systems Engineers is a commitment of the NASA engineering community, and one of our tenets for excellence. This development ensures our corps of engineers obtain the depth of technical acumen that they require, first as discipline engineers and then as Chief Engineers and Lead Systems Engineers, but also the associated management skills and experience to ensure they can interact with the rest of the project team and with program, Center, and Agency leadership. What's more, this development also ensures that NASA Chief Engineers and Lead Systems Engineers proficiently serve as leaders of their own technical teams, and that's what this book is all about. These technical leaders are critical to successfully implementing the three safety tenets we inherited from the Apollo program. These include the following: Strong in-line checks and balances. This means that engineers check their fellow engineers, and that no one checks their own homework. 1. Healthy tension between responsible organizations. In NASA today that is the programs and the three Technical Authorities (Engineering, Safety, and Health and Medical). Each organization has to be on equal footing with separate but equal chains of command to allow issues to be raised independently and provide the healthy tension to create organizational checks and balances. 2. "Value-added" independent assessment. "Value-added" means you bring in outside technical experts to peer review critical issues. Having a fresh set of eyes on a problem can provide a different perspective, leverage different experiences and result in more robust solutions. 3. NASA arrived at these three tenets through considerable blood, sweat, and loss, and our commitment to them is now inscribed in our Agency governance. As Chief Engineers and Lead Systems Engineers, your role in this is paramount, and achieving excellence in this is an expectation of your job. Serving in this role is not an easy task, but it is a tremendously rewarding one. You are the leaders of your technical teams, owners of the technical baseline, standard bearers of engineering best practices, decision makers, risk mitigators and problem solvers. You are Chief Engineers and Lead Systems Engineers, the title of which should say it all.

**The Pilot Factor** Aircraft Command Techniques: Gaining Leadership Skills to Fly the Left Seat  
The Commission on Accreditation of Medical Transport Systems (CAMTS) has been accrediting air and ground transport services since 1991. One of the most significant needs the Commission has recognized is to assist transport services in creating a culture that supports safety and quality for both crews and patients. Most of the helicopter EMS (emergency medical service) accidents and many ground ambulance accidents can be attributed to human factors and systems designs that lead to poor decision-making. Management commitment is vital to create and maintain a culture that supports risk assessment, accountability, professionalism and organizational dynamics. This reference book has been created by CAMTS to address this need directly and comprehensively. It offers a groundbreaking collection of expert insights and practical solutions that can be used by EMS, Fire and Rescue, public and private services, and professional emergency and transport professionals worldwide. Quoting from the foreword written by the late Robert L. Helmreich, Professor Emeritus of Psychology at The University of Texas Human Factors Research Project, 'This is an important book which should be required reading for everyone involved in patient transport, from managers and dispatchers to those at the sharp end... The experienced and able authors and editors of this work use culture as the overarching concept needed to maximize safety while delivering patients expeditiously.'

**THE BEST RESOURCE A PILOT CAN HAVE TO UNDERSTAND HOW TO FLY IN ALL TYPES OF WEATHER**  
How do you improve on the best guide for pilots to learn how to fly in all kinds of weather? The answer is the Fifth Edition of *Weather Flying*. Regarded as the bible of weather flying, this aviation classic not only continues to make complex weather concepts understandable for even the least experienced of flyers, but has now been updated to cover new advances in technology. At the same time, this respected text still retains many of its original insights from over four decades of publication, provided by renowned weather flying veteran Robert N. Buck. In a straightforward style, new author Robert O. Buck (son of the book's original author) delves into how computers, personal electronic devices, electronic flight instrument systems, and other technologies are changing the way general aviation pilots fly weather. He addresses the philosophy and discipline required to use these systems, what they are really telling us, and their task as supplement to good flying sense. The updated Fifth Edition also discusses how to handle changes in FSS weather briefing, including a look at new weather information products and airborne datalink weather information as they affect weather flying. This new edition features: Discussions of weather information--what it is, how to get it, and how to use it Explanations of various weather phenomena and how they affect a flight Updates on the new GPS and smart technology used in weather flying Changes in weather information and briefings Descriptions of improved anti- and deicing systems Serious discussion of the pilot-electronics interface Now more than ever, having the Bucks' *Weather Flying* at the controls is the next best thing to having the authors with you in the cockpit.

**It's Your Ship** John Wiley & Sons

This title was first published in 2002: A comprehensive examination of the characteristics of the experienced captain. Each chapter begins with an appropriate and relevant anecdote that is analogous to the chapter's main theme. It then progresses to the chapter's main objective and finishes with a scenario that the reader must try to solve from a captain's perspective. Immediately following each of these scenarios, the reader is presented with a number of considerations that should be evaluated when solving the problem. The intent is to help the pilot practice thinking as a captain. Offering a wealth of practical guidance, this book is an ideal platform for pilots or indeed, anyone interested in how leadership and management skills are used to achieve excellence. The reader should gain important command skills and learn how to apply these skills to routine and unexpected situations, in the same way in which an experienced captain would.

The Pilot Factor is a new approach to Crew Resource Management (CRM) that will empower your team to achieve a new level of safety and efficiency by learning or acquiring three key skills: Communication, Leadership and Experience. The concepts are introduced through the use of real stories, making *The Pilot Factor* an enjoyable yet powerful read. The CRM Revolution is coming...

**Army Leadership and the Profession (ADP 6-22)** Routledge

Read this million-copy bestseller for leadership insights about top-down change to improve productivity in your business starting with the most important person: You. When Captain Abrashoff took over as commander of USS Benfold, it was like a business that had all the latest technology but only some of the productivity. Knowing that responsibility for improving performance rested with him, he realized he had to improve his own leadership skills before he could improve his ship. Within months, he created a crew of confident and inspired problem-solvers eager to take the initiative and responsibility for their actions. The slogan on board became "It's your ship," and Benfold was soon recognized far and wide as a model of naval efficiency. How did Abrashoff do it? Against the backdrop of today's United States Navy, Abrashoff shares his secrets of successful management including: See the ship through the eyes of the crew: By soliciting a sailor's suggestions, Abrashoff drastically reduced tedious chores that provided little additional value. Communicate, communicate, communicate: The more Abrashoff communicated the plan, the better the crew's performance. His crew eventually started calling him "Megaphone Mike," since they heard from him so often. Create discipline by focusing on purpose: Discipline skyrocketed when Abrashoff's crew believed that what they were doing was important. Listen aggressively: After learning that many sailors wanted to use the GI Bill, Abrashoff brought a test official aboard the ship and held the SATs forty miles off the Iraqi coast. From achieving amazing cost savings to winning the highest gunnery score in the Pacific Fleet, Captain Abrashoff's extraordinary campaign sent shock waves through the U.S. Navy. It can help you change the course of your ship, no matter where your business battles are fought.

*Brown Bag Lessons, The Magic of Bullet Writing* centers on effective bullet writing and guarantees immediate improvement. Skillful writing doesn't have to be difficult. No other book approaches writing the way this book does, and no other book teaches these techniques. After reading this book, you will fully understand how to write strong bullets and "why" every word matters. In 2003 the author created a seminar to teach a fair and consistent process to evaluate recognition packages. This seminar transformed an entire organization within six months. Since then, the techniques have decisively transformed the writing, recognition, and promotions of every organization applying them. The practices in this book continue to positively impact the Air Force and sister services through professional military education. In addition, the concepts have helped transitioning service members and college students better communicate acquired capabilities and competencies on their résumés. Read on to discover the "magic" and open your eyes to a brand new way to look at writing. The US Air Force promotion system emphasizes the importance of documenting your very best accomplishments. Under this system, promotion comes from the most recent performance reports, so Airmen must communicate the best accomplishments and not just words that fill the white space. This *Magic of Bullet Writing* will ensure you know how to articulate not just what you are doing but also convey your strongest competencies and capabilities so the promotion board can fully assess your readiness for promotion. Training materials that correspond to the lessons in this book are available for free download at <http://www.brownbaglessons.com>. Are you ready for the magic?

*The Armed Forces Officer* Government Printing Office

*Up-To-Date Coverage of Every Aspect of Commercial Aviation Safety* Completely revised edition to fully align with current U.S. and international regulations, this hands-on resource clearly explains the principles and practices of commercial aviation safety—from accident investigations to Safety Management Systems. *Commercial Aviation Safety, Sixth Edition*, delivers authoritative information on today's risk management on the ground and in the air. The book offers the latest procedures, flight technologies, and accident statistics. You will learn about new and evolving challenges, such as lasers, drones (unmanned aerial vehicles), cyberattacks, aircraft icing, and software bugs. Chapter outlines, review questions, and real-world incident examples are featured throughout. Coverage includes: • ICAO, FAA, EPA, TSA, and OSHA regulations • NTSB and ICAO accident investigation processes • Recording and reporting of safety data • U.S. and international aviation accident statistics • Accident causation models • The Human Factors Analysis and Classification System (HFACS) • Crew Resource Management (CRM) and Threat and Error Management (TEM) • Aviation Safety Reporting System (ASRS) and Flight Data Monitoring (FDM) • Aircraft and air traffic control technologies and safety systems • Airport safety, including runway incursions • Aviation security, including the threats of intentional harm and terrorism • International and U.S. Aviation Safety Management Systems

Learn how to be a leader in your own life and career with expert advice from one of the Navy's elite TOPGUN instructors. During a twenty-year career in uniform, Guy Snodgrass became one of the most skilled fighter pilots in the U.S. Navy, commanding combat jets over some of the most dangerous war zones in the world -- and he did it all using the lessons he learned at the Navy's Fighter Weapons School (TOPGUN). The real-life inspiration for the blockbuster films *Top Gun* and *Top Gun: Maverick*, the U.S. Navy Fighter Weapons School trains the top one percent of our nation's fighter pilots. Over the course of twelve weeks, these pilots are drilled on aerial tactics, combat, and skills required to win in any organization. Ordinary people are transformed into world-class leaders. Pilots, like Commander Snodgrass, who remain on staff as TOPGUN instructors, are held to even higher and more demanding standards. In TOPGUN's Top 10, Commander Snodgrass distills some of the most important lessons he's learned and taught over the course of his career into a taut, engaging book for readers of all ages and experience levels. It's the perfect gift for anyone looking to change careers, excel in the workplace, or find their way in the world after college graduation. Smart, practical, and direct, Snodgrass's account of real TOPGUN experience will inspire a new generation of leaders.
