National Engineering Handbook Geological Society of London

"Educational Visions looks to future developments in educational technology by reviewing its history, covering themes such as learning analytics and design, inquiry learning, citizen science, inclusion, and learning at scale. The book shows how successful innovations can be built over time, informs readers about current practice and demonstrates how they can use this work themselves. The chapters show how one research group has worked persistently over 40 years with four visions in mind, of a future where: - learning is accessible for everyone - teaching is adapted to meet learners' needs - teams can successfully teach any number of students at a distance - learners engage enthusiastically with STEM learning. Each vision is covered in a pair of chapters: the first brings together four decades of research in the area; the second introduces current work, showing how they are united by a consistent framework and a persistent vision." This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. Educational Visions Cicerone Press Limited

The 66 via ferrata routes in this guidebook are grouped by area - Geneva and the Northern Alps, Chambery, the Tarentaise and Maurienne valleys, Grenoble and Briancon - and run the full gamut of challenge, from very easy, protected routes suitable for children, through to extremely exposed and technical routes for experienced ferratists only. Routes are illustrated by topo diagrams on colour photographs, and simple sketch maps. Those used to the older Italian routes will find these French routes quite different, closer to scrambling or rock climbing and often seeking out the most vertigo-inducing terrain. But most routes should be within the reach of any strong hillwalker and protection is high and well maintained. Recent years have witnessed a surge in the number of via ferrata routes set up in the iconic mountains of the French Alps. With routes set on or near many classics including the massifs of Mont Blanc, the Vanoise and the Queyras, this guide shows the best of what is now available.

The Simplon Fault Zone Routledge

This book provides a comprehensive overview of the Landscapes and Landforms of Switzerland. It covers the country's geological and tectonic context, together with its climatic context, geomorphological history, structural and karstic landscapes, glacial and periglacial landscapes, landscapes with natural hazards, geomorphology and society, and the preservation of its geomorphological heritage. Richly illustrated, it presents case studies on some of the country's most famous natural sites, including the Matterhorn, Aletsch Glacier, Sardona Tectonic Arena, and Engadine, among others.

Celebrating 100 years of the Swiss Society for Meteorology Springer Science & Business Media

After a short review of the history of research, the work introduces and delimits the concepts related to grammaticalization. It then provides extensive exemplification of grammaticalization phenomena in diverse languages, ordered by grammatical domains such as the verbal, pronominal and nominal sphere and clause level relations. The final chapter presents a theory of grammaticalization which is based on the autonomy of the linguistic sign with respect to the paradigmatic and syntagmatic axes. This is the basis of the structural parameters that constitute grammaticalization. They are operationalized to the point of rendering degrees of grammaticalization measurable. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. Deutsche Bibliographie World of Science

There has been a dramatic demographic shift from rural areas to cities in sub-Saharan African countries over the last few decades. This continuing urbanisation trend has created new challenges

for local governments in terms of managing urban services, since over half of the city streets in these countries have no names or addresses, and the problem is particularly acute in the poorest neighbourhoods. This publication examines the use of street addressing initiatives to address this problem, giving information on current and future applications, considering examples of use in many African countries, and setting out a methodological guide for implementing such initiatives.

Banff, Jasper and Glacier National Parks ESRI, Inc.

This guidebook presents the stunning Alpine Pass Route, now fully waymarked as Via Alpina 1. The 360km trail traverses Switzerland from east to west, from Sargans near the Liechtenstein border to Montreux on Lac Leman (Lake Geneva). Crossing sixteen Alpine passes, it showcases some of the country's most breathtaking mountain landscapes, boasting views of iconic peaks such as the Wetterhorn, Eiger, Jungfrau and Les Diablerets. The route is suitable for those with some experience of Alpine trekking: it amasses over 20,000m of ascent and involves some steep sections. It can be completed in 2-3 weeks, although it is also possible to walk shorter sections; alternatively postbus, cable-car and rail connections could be used to allow for a tighter schedule. The route is presented in 18 stages, each featuring step-by-step route description accompanied by 1:100,000 mapping, route profiles and notes on transport, accommodation and facilities. In addition, a 26km prologue in Liechtenstein and an alternative finish following the old course of the Alpine Pass Route via Gsteig are also described. Accommodation options range from mountain huts to hotels and inns, with camping available at a number of licensed sites along the route.

Adventures with Natural Wonders Walter de Gruyter

The Alps, with their outstanding outcrop conditions, represent a superb natural laboratory for many geological processes, and have played a crucial role in the history of geology. This book gives an up-to-date and holistic overview of the key aspects of Alpine geology. After a brief presentation of the plate tectonic framework, the rock suites are discussed, starting with the pre-Triassic crystalline basement, followed by Paleozoic, Mesozoic and Cenozoic sedimentary sequences. The lithological description of the rock types is supplemented by a discussion of their paleogeographic and plate tectonic contexts. The book goes on to describe the structure of the Alps (including the Jura Mountains and the Alpine foreland to the north and south) illustrated by numerous cross-sections. The evolution of the Alps as a mountain chain incorporates a discussion of the Alpine metamorphic history and a compilation of orogenic timetables. The final sections cover the evolution of Alpine drainage patterns and the region's glacial history. Readership: The book is essential reading for students and lecturers on Alpine courses and excursions, and all earth-scientists interested in the geology of the region.

Chamonix to Zermatt Cicerone Press Limited

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Unforgettable Places Cicerone Press Limited

A guidebook to the classic Chamonix to Zermatt trek from Mont Blanc to the Matterhorn. The 225km Walker's Haute Route through the French and Swiss Alps crosses 11 passes, gains more than 14,000m in height and is a strong contender for the title of Most Beautiful Walk in Europe. The high-level route is described in 14 day stages, with optional variants, and is suitable for walkers with a good level of fitness and some previous alpine trekking experience. The final approach to Zermatt

adopts the dramatic Europaweg, a high-level traverse of the east wall of the Mattertal, crossing the 500-metre suspension bridge above Randa. An alternative valley route to Zermatt can be taken if this does not appeal. Alongside clear route descriptions and mapping for each stage of the trek, there is essential practical information on travel to Chamonix and return from Zermatt, as well as advice on accommodation in alpine villages and mountain refuges, trekking safety, equipment, itinerary planning and preparation. Taking 2 weeks to complete, this challenging but rewarding trek encompasses views of the greatest collection of 4000 metre peaks in the Alps - Mont Blanc, the Grand Combin, Dent Blanche, Weisshorn and the Matterhorn - and visits some of the most spectacular valleys, including the Val d'Hérens, Val d'Annivers and the Mattertal.

[The Modern Poster](#) Cambridge University Press

As human populations expand and have increasing access to technology, two general environmental concerns have arisen. First, human populations are having increasing impact on the earth system, such that we are altering the biospheric carbon pools, basic processes of elemental cycling and the climate system of the earth. Because of time lags and feedbacks, these processes are not easily reversed. These alterations are occurring now more rapidly than at any time in the last several million years. Secondly, human activities are causing changes in the earth's biota that lead to species extinctions at a rate and magnitude rivaling those of past geologic extinction events. Although environmental change is potentially reversible at some time scales, the loss of species is irrevocable. Changes in diversity at other scales are also cause for concern. Habitat fragmentation and declines in population sizes alter genetic diversity. Loss or introduction of new functional groups, such as nitrogen fixers or rodents onto islands can strongly alter ecosystem processes. Changes in landscape diversity through habitat modification and fragmentation alter the nature of processes within and among vegetation patches. Although both ecological changes altering the earth system and the loss of biotic diversity have been major sources of concern in recent years, these concerns have been largely independent, with little concern for the environmental causes the ecosystem consequences of changes in biodiversity. These two processes are clearly interrelated. Changes in ecological systems cause changes in diversity.

[Petrogenesis of Metamorphic Rocks](#) Springer Nature

The evidence for the Little Ice Age, the most important fluctuation in global climate in historical times, is most dramatically represented by the advance of mountain glaciers in the sixteenth and seventeenth centuries and their retreat since about 1850. The effects on the landscape and the daily life of people have been particularly apparent in Norway and the Alps. This major book places an extensive body of material relating to Europe, in the form of documentary evidence of the history of the glaciers, their portrayal in paintings and maps, and measurements made by scientists and others, within a global perspective. It shows that the glacial history of mountain regions all over the world displays a similar pattern of climatic events. Furthermore, fluctuations on a comparable scale have occurred at intervals of a millennium or two throughout the last ten thousand years since the ice caps of North America and northwest Europe melted away. This is the first scholarly work devoted to the Little Ice Age, by an author whose research experience of the subject has been extensive. This book includes large numbers of maps, diagrams and photographs, many not published elsewhere, and very full bibliographies. It is a definitive work on the subject, and an excellent focus for the work of economic and social historians as well as glaciologists, climatologists, geographers, and specialists in mountain environment.

Using a social-psychological approach, the new edition of this book remains solidly grounded in theory and research, while also providing useful information to help individuals examine their own feelings about-and cope with-death and grieving. The well-known authors and researchers integrate stimulating personal accounts throughout the text, and apply concepts to specific examples that deal with cross cultural perspectives and the practical matters of death and dying.

The Swiss Alpine Pass Route - Via Alpina Route 1 Springer

Contributions by respected European and American scholars from the field of classical and religious studies are collected in this volume. It is a representative selection of contemporary research on myths, the forms they can take, and their transformation in various environments and ages.

An inspirational larger format guidebook to 20 summer treks in the Alps across Italy, Austria, Switzerland, France and Slovenia, including the classics such as the Tour of Mont Blanc and lesser-known routes like the Traverse of the Slovenian Alps. Perfect for planning, the treks included are: Tour of Mont Blanc, Tour of the Matterhorn, Tour of Monte Rosa, Walker's Haute Route, Tour of the

Jungfrau Region, Tour of the Vanoise and Dolomites AV 1 & 2; (longer trans-Alpine routes) GR5 (Lake Geneva to Nice), Eastern Alps E5, Italian Alps GTA and the Traverse of the Slovenian Alps; and (for the Alpine adventurer) Alpine Pass Route, Tour of the Oisans, Tour of the Queyras, Tour of Mont Ruan, Stubai High Route, Zillertal High Route, Gran Paradiso AV2 and the Ratikon Hoehenweg. Outline schedules for each trek allow you compare the routes and become inspired to take up the challenge. Basic day-by-day route descriptions for each route are illustrated with maps and profiles, helping you choose the best routes to walk.

Whether you are dreaming of steaming jungle treks, conquering untamed peaks, chatting up the hottie in the hostel or simply chilling out on an isolated beach - this book is your ticket to turning your travel dreams into reality. Packed to bursting with backpacking tips and tricks, *How to Travel the World on \$10 a Day* is the ultimate planning resource for the low-budget traveller. Better still, you'll learn how to stretch your dollars further by picking up work on the road, so if you don't want to go back home, you don't have to. Ditch your desk, take the plunge and hit the road... With this book by your side you'll save thousands of dollars, skip unnecessary headaches and be able to travel the world with confidence. "Will Hatton has been on the road for nine years, travelling to far-flung lands and visiting close to 100 countries all over the world. His blog, the Broke Backpacker, is one of the most popular adventure travel blogs in the world. A keen hitchhiker, Will has hitchhiked tens of thousands of kilometers, crossing Europe, Iran, Pakistan, India and South East Asia by thumb. Will plans to open a backpacker hostel in the mountains of Pakistan. If you find yourself nearby -- come say hey!

[Cartographic Relief Presentation](#) John Wiley & Sons

From bestselling author Diccon Bewes (Swiss Watching), comes this photographic tour of the 52 most unforgettable places in Switzerland. A book for both international visitors and local Swissophiles, each double page includes an iconic photo and a lively description. From the Aletsch Glacier to Zurich - and the towns and trains in between (with maybe even a cow or two), the whole of Switzerland is covered, making this a must-have memory of a beautiful country.

[Arctic and Alpine Biodiversity: Patterns, Causes and Ecosystem Consequences](#) Springer Science & Business Media

In 2016 the Swiss Society for Meteorology (Schweizerische Gesellschaft für Meteorologie, SGM) celebrates its 100th anniversary. Compared to other meteorological societies it is not among the oldest ones. Nevertheless, meteorology has gone through such a remarkable evolution in the past 100 years that it is worthwhile to take a look back and recapitulate the developments of both science and SGM - and to reveal their interaction. The idea of this book is to give an overview of what has happened in the field of atmospheric sciences in Switzerland since the first systematic long-term meteorological observations until today.

[Understanding Dying, Death, and Bereavement](#) Springer Science & Business Media

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

[Geology of the Alps](#) World Bank Publications

What Arieh Warshel and fellow 2013 Nobel laureates Michael Levitt and Martin Karplus achieved -- beginning in the late 1960s and early 1970s when computers were still very primitive -- was the creation of methods and programs that describe the action of biological molecules by multiscale models. In this book, Warshel describes this fascinating, half-century journey to the apex of science. From Kibbutz Fish Ponds to Nobel Prize is as much an autobiography as an advocacy for the emerging field of computational science. We follow Warshel through pivotal moments of his life, from his formative years in war-torn Israel in an idealistic kibbutz that did not encourage academic education; to his time in the army and his move to the Technion where he started in his obsession of understanding the catalytic power of enzymes; to his eventual scientific career which took him to the Weizmann Institute, Harvard University, Medical Research Council, and finally University of Southern California. We read about his unique contributions to the elucidation of the molecular basis of biological functions, which are combined with instructive stories about his persistence in advancing ideas that contradict the current dogma, and the nature of his scientific struggle for recognition, both personal and for the field to which he devoted his life. This is, in so many ways, more than just a memoir: it is a profoundly inspirational tale of one man's odyssey from a kibbutz that did not allow him to go to a university to the pinnacle of the scientific world, highlighting that the correct mixture of persistence, talent and luck can lead to a Nobel Prize.
