The Probiotic Cure Springer  
Ebersole & Hess' Gerontological Nursing and Healthy Aging is the only gerontological nursing text that follows a wellness-based, holistic approach to older adult care. Designed to facilitate healthy aging regardless of the situation or disease process, this text goes beyond simply tracking recommended

treatments to address complications, alleviate discomfort, and help older adults lead healthy lives. Featuring evidence-based practice boxes, safety alerts, expanded tables, and careful attention to age, gender, and cultural differences, Ebersole & Hess' Gerontological Nursing and Healthy Aging is the most complete text on the market. Focus on health and wellness helps you gain an understanding of the patient's experience. AACN and the Hartford Institute for Geriatric Nursing

core competencies integrated throughout. Consistent chapter organization and pedagogy, including Learning Objectives, Glossary, and Research and Study Questions/Activities. Evidence-Based Practice boxes summarize research findings that confirm effective practices or identify practices with unknown, ineffective, or harmful effects. Careful attention to age, cultural, and gender differences helps you understand these important considerations in caring for older adults. Expanded tables, boxes, and forms, including the latest scales and guidelines for proper health assessment make information easy to find and use. Activities and discussion questions at the end of every chapter equip you with the information you need to assess the

patient. UPDATED! Healthy People 2020 boxes integrate information about healthy aging. NEW! Safety Alerts highlight safe practices and quality of care QSEN competencies. NEW! Chapter on Neurologic Compromise expands content on stroke and Parkinson's disease.

In *The Phytozyme Cure*, Dr. Michelle Schoffro Cook reveals her cutting-edge, powerful, and all-natural Phytozyme Therapy, which involves the specific combination of miracle healing substances to supercharge their effects - and your health. Dr. Michelle Schoffro Cook is one of North America's leading natural health experts. Over the past two decades, she has seen that

phytonutrients alone can speed weight loss, aid the prevention of heart disease and cancer, and even reverse some of the effects of aging. Similarly, certain enzymes have been known to reverse pain and inflammation; break down bacteria, fungi, viruses, toxins, and cancer cells; remove scar tissue; and even help our bodies grow healthy new tissue, skin and hair. But the real miracle begins when these powerhouses work together. With the right combination, many illnesses can be improved or even reversed. In *The Phytozyme Cure*, Dr. Schoffro Cook shares these powerful protocols for managing more than 30 common health conditions including allergies, digestive disorders, chronic fatigue syndrome, arthritis, heart disease, diabetes, and cancer. Find out

how you can use phytozyme therapy to quickly and easily arm your body against disease and enjoy long-term healthy living. With this new approach to health, all of us can supercharge our immune systems, experience abundant energy, and even slow down the effects of aging! From James Dashner, author of the #1 New York Times bestselling Maze Runner series, comes the first book in the bestselling Mortality Doctrine series, an edge-of-your-seat cyber-adventure trilogy that includes The Rule of Thoughts and The Game of Lives. Includes a sneak peek of The Fever Code, the highly anticipated conclusion to the Maze Runner series—the novel that finally reveals how the Maze was built! The VirtNet offers total mind and body immersion, and the more hacking skills you have, the more fun it is. Why

bother following the rules when it's so easy to break them? But some rules were made for a reason. Some technology is too dangerous to fool with. And one gamer has been doing exactly that, with murderous results. The government knows that to catch a hacker, you need a hacker. And they've been watching Michael. If he accepts their challenge, Michael will need to go off the VirtNet grid, to the back alleys and corners of the system human eyes have never seen—and it's possible that the line between game and reality will be blurred forever. Praise for the Mortality Doctrine Series: "Dashner takes full advantage of the Matrix-esque potential for asking 'what is real.'" —io9.com "Set in a world taken over by virtual reality gaming, the series

perfectly capture[s] Dashner’s hallmarks for inventiveness, teen dialogue and an ability to add twists and turns like no other author.” —MTV.com “A brilliant, visceral, gamified mash-up of The Matrix and Inception, guaranteed to thrill even the non-gaming crowd.” —Christian Science Monitor

Random House US

A must-have reference for both general physicians and advanced practice providers, Fanaroff and Martin's Neonatal-Perinatal Medicine: Diseases of the Fetus and Infant provides trusted, time-tested guidance on the management and evidence-based treatment of problems in the mother, fetus, and neonate. The fully revised 12th Edition is an ideal resource for

every stage of practice and remains the most comprehensive, multidisciplinary text in the field. Drs. Richard J. Martin and Avroy A. Fanaroff from Rainbow Babies and Children’s Hospital bring you up to date with everything from diagnosis and treatment selection through post-treatment strategies and management of complications—all with a dual focus on neonatology and perinatology, and all designed to help you improve the quality of life and long-term outcomes of your patients. Provides up-to-date, evidence-based content throughout, including state-of-the-art coverage of personalized medicine and genetics. Contains new chapters on Big Data for the Smallest Patients: What we can learn from neonatal database research; Role of Umbilical Cord

Management in Neonatal Resuscitation; Care of Periviable Micropremies: the Japanese perspective; Longer Term Respiratory Outcomes of Prematurity; and Perinatal Palliative Care. Features extensive updates throughout, including blood and the hematopoietic system; social and economic contributors to neonatal outcome; fetal growth restriction; diagnostic imaging of the neonate; anesthesia in the neonate; postnatal bacterial infections; neonatal management of congenital heart disease; and retinopathy of prematurity. Includes over 600 detailed, full-color illustrations that depict disorders in the clinical setting and explain complex information. Provides indexing in both volumes that provides quick access to specific guidance. Offers a global

perspective with an expanded number of international contributors. An ideal resource for clinical practice as well as recommended reading for neonatology board review or maintenance of certification. Any additional digital ancillary content may publish up to 6 weeks following the publication date. [CEB Common English Bible Catholic Edition - eBook \[ePub\]](#) Delacorte Press The three books in the pulse-pounding Maze Runner series! When the doors of the lift crank open, the only thing Thomas remembers is his first name. But he's not alone. He's surrounded by boys who welcome him to the Glade - a walled encampment at the centre of a bizarre and terrible stone maze. But the maze is just the beginning ...

The film adaptation of Dashner's third installment of his #1 "New York Times"-bestselling Maze Runner series hits theaters on January 26. This special tie-in edition features an eight-page full-

color insert with photos from the film.

*Ebersole and Hess' Gerontological Nursing & Healthy Aging - E-Book*

Chicken House

With the 13th edition, Wintrobe's Clinical Hematology once again bridges the gap between the clinical practice of hematology and the basic foundations of science. Broken down into eight parts, this book provides readers with a comprehensive overview of: Laboratory Hematology, The Normal Hematologic System, Transfusion Medicine, Disorders of Red Cells, Hemostasis and Coagulation; Benign Disorders of Leukocytes, The Spleen and/or Immunoglobulins; Hematologic Malignancies, and Transplantation.

Within these sections, there is a heavy focus on the morphological exam of the

peripheral blood smear, bone marrow, lymph nodes, and other tissues. With the knowledge about gene therapy and immunotherapy expanding, new, up-to-date information about the process and application of these therapies is included. Likewise, the editors have completely revised material on stem cell transplantation in regards to both malignant and benign disorders, graft versus host disease, and the importance of long-term follow-up of transplantation survivors.

National Geographic Books

From James Dashner, author of the #1

New York Times bestselling MAZE

RUNNER series, comes the second book

in the bestselling Mortality Doctrine

series, an edge-of-your-seat cyber-

adventure trilogy that includes *The Eye of Minds* and *The Game of Lives*. Includes a sneak peek of *The Fever Code*, the highly anticipated conclusion to the *Maze Runner* series—the novel that finally reveals how the Maze was built! Michael thought he understood the *VirtNet*, but the truth he discovered is more terrifying than anyone at *VirtNet Security* could have anticipated. The cyber terrorist Kaine isn't human. It's a Tangent, a computer program that has become sentient. And Michael just completed the first step in turning Kaine's master plan, the *Mortality Doctrine*, into a reality. The *Mortality Doctrine* will populate Earth entirely with human bodies harboring Tangent minds. The VNS would like to pretend the world is perfectly safe, but Michael and his

friends know that the takeover has already begun. And if they don't stop Kaine soon, it will be game over for humanity. Praise for the Bestselling *MORTALITY DOCTRINE* Series: "Dashner takes full advantage of the Matrix-esque potential for asking 'what is real.'" —io9.com "Set in a world taken over by virtual reality gaming, the series perfectly capture[s] Dashner's hallmarks for inventiveness, teen dialogue and an ability to add twists and turns like no other author." —MTV.com "A brilliant, visceral, gamified mash-up of *The Matrix* and *Inception*, guaranteed to thrill even the non-gaming crowd." —Christian Science Monitor  
*The Rule of Thoughts (The Mortality Doctrine, Book Two)* Chicken House  
This bundle contains *Medical Error* and

Lethal Remedy, PLUS bonus chapters from Code Blue and Diagnosis Death. Medical Error Dr. Anna McIntyre's life was going along just fine until someone else started living it. Her patient died because of an identity mix-up; her medical career is in jeopardy because of forged prescriptions; and her credit is in ruins. She thought things couldn't get worse, but that was before she opened the envelope and saw a positive HIV test with her name on it. Lethal Remedy Dr. Sara Miles' teenage patient is on the brink of death from an overwhelming, highly resistant infection. Only an experimental antibiotic, developed and administered by Sara's ex-husband can save the girl's life. But potentially lethal effects from the drug send Sara and her colleague, Dr. Rip Pearson, on a hunt for

hidden critical data that will let them reverse the effects before it's too late. What is the missing puzzle piece? And who is hiding it?

**The Kill Order (Maze Runner, Book Four; Origin) Chicken House**

BACKGROUND Bleeding complications increase mortality in patients with acute coronary syndrome (ACS). Potential gender difference in bleeding regarding prevalence, location, severity and prognostic impact is still controversial and not well investigated. In regard to this aspect the relevance of triple antithrombotic therapy (TAT) is questioned. There is an ongoing debate on the clinical implications of TAT and furthermore assumed that bleeding complications, except impact on outcome, also are associated with great

influence on health economy. The main focus of this thesis was to further investigate the incidence and impact of bleeding complications in patients treated for ACS, with special reference to gender disparities, TAT and health economics. The thesis will highlight the importance of improved bleeding prevention strategies for both men and women. METHOD Paper I, II and III Observational studies from the SWEDEHEART register. In paper I we investigated patients hospitalised with myocardial infarction (MI) during 2006–2008. Outcomes were in-hospital bleedings, in-hospital mortality and one-year mortality in hospital survivors. In paper II, all patients with MI, in the County of Östergötland, Sweden during 2010 were included and followed for one

year. The patients' medical records were evaluated, in relation to short and long-term bleeding complications, bleeding location, withdrawal of platelet inhibiting drugs and nonfatal MI and death. Paper III included all patients discharged with (TAT) in the County of Östergötland 2009-2015. Information about bleeds and ischemic complications during one-year follow-up were retrieved from the medical records. Estimation of the health care costs associated with bleeding episodes were added to the evaluation. Paper IV Patients with MI, scheduled for coronary angiography were recruited. All patients received clopidogrel and aspirin. A subgroup of patients received GP IIb/IIIa-inhibitor. Outcomes were platelet aggregation assessed at several time points, using a Multiplate

impedance aggregometer, measurement of P-selectin in plasma, evaluation of high residual platelet reactivity (HRPR) and low residual platelet reactivity (LRPR) respectively and incidence of bleeding complications. A comparison between women and men was performed. RESULTS Paper I A total number of 50.399 patients were included, 36.6% women. In-hospital bleedings were more common in women (1.9% vs. 3.1%,  $p < 0.001$ ) even after multivariable adjustment (OR 1.17, 95% CI 1.01–1.37). The increased risk for women was found in STEMI (OR 1.46, 95% CI 1.10–1.94) and in those who underwent PCI (OR 1.80, 95% CI 1.45–2.24). In contrast the risk was lower in medically treated women (OR 0.79, 95% CI 0.62–1.00). After adjustment, in-

hospital bleeding was associated with higher risk of oneyear mortality in men (OR 1.35, 95% CI 1.04–1.74), whereas this was not the case in women (OR 0.97, 95% CI 0.72–1.31). Paper II In total 850 consecutive patients were included. The total incidence of bleeding events was 24.4% (81 women and 126 men,  $p = ns$ ). The incidence of all in hospital bleeding events was 13.2%, with no gender difference. Women had significantly more minor nonsurgery related bleeding events than men (5% vs 2.2%,  $p = 0.02$ ). During follow-up, 13.5% had a bleeding, with more non-surgery related bleeding events among women, 14.7% vs 9.7% ( $p = 0.03$ ). The most common bleeding localisation was the gastrointestinal tract, more in women than men (12.1% vs 7.6%,  $p = 0.03$ ).

Women also had more access site bleeding complications (4% vs 1.7%,  $p=0.04$ ), while men had more surgery related bleeding complications (6.4% vs 0.9%,  $p<0.001$ ). Increased mortality was found only in men with non-surgery related bleeding events ( $p=0.008$ ). Paper III Among 272 identified patients, 156 bleeds occurred post-discharge, of which 28.8% were of gastrointestinal origin. In total 54.4% had at least one bleed during or after the index event and 40.1% bled post-discharge of whom 28.7% experienced a TIMI major or minor bleeding. Women discontinued TAT prematurely more often than men (52.9 vs 36.1%,  $p=0.01$ ) and bled more (48.6 vs. 37.1%,  $p=0.09$ ). One-year mean health care costs were EUR 575 and EUR 5787 in non-bleeding and

bleeding patients, respectively. Paper IV We recruited 125 patients (37 women and 88 men). We observed significantly more inhospital bleeding events in women as compared to men (18.9% vs 6.8%,  $p=0.04$ ). There were no differences in platelet aggregation using three different agonists, reflecting treatment of GPIIb/IIIa inhibitors, clopidogrel and aspirin, at four different time-points nor were there any differences in p-selectin in plasma 3 days after admission. CONCLUSION There is a remarkably high bleeding incidence among patients treated with DAPT and even more so if treated with TAT. Female gender is an independent risk factor of inhospital bleeding after myocardial infarction, this higher bleeding risk in women appears to be

restricted to invasively treated patients and STEMI patients. Even if women had higher short- and long-term mortality, there was no difference between the genders among those who bled. After multivariable adjustment the prognostic impact of bleeding complications was higher in men. Women seem to experience more minor/minimal bleeding complications than men, predominantly GI bleeding events and access site bleeding events, with no apparent impact on outcome. In contrast men with non-surgery related bleeding complications had higher mortality. There is a lack of differences between the genders concerning platelet aggregation. Our results do not support gender disparities in platelet reactivity and excess dosing as a major

explanation for increased bleeding risk in women. Improved bleeding prevention strategies are warranted for both men and women.

### **The Diabetes Cure** Scholastic

This textbook is the first to focus on comprehensive interdisciplinary care approaches aimed at enhancing the wellbeing of children with cancer and their families throughout the illness experience. Among the topics addressed are the epidemiology of pediatric cancer distress, including physical, emotional, social, and spiritual dimensions; the role of the interdisciplinary team; communication and advance care planning; symptom prevention and management; care at the end of life; family bereavement care; and approaches to ease clinician distress.

The contributing authors are true experts and provide guidance based on the highest available level of evidence in the field. The book has not only an interdisciplinary but also an international perspective; it will appeal globally to all clinicians caring for children with cancer, including physicians, nurses, psychosocial clinicians, and chaplains, among others.

#### Management of Pancreatic

#### Neuroendocrine Tumors jideon francisco marques

Many doctors tell their patients how to manage diabetes, but why should they simply manage it when they can be rid of it once and for all? In the Diabetes Cure, Alexa Fleckenstein presents a groundbreaking plan to do just that by targeting the real cause of diabetes:

inflammation. The book instructs readers on how to use the five essentials of health to achieve a diabetes-free life. Through easy, quick exercises (how does 5 minutes a day sound?); tasty, anti-inflammatory recipes; and many other innovative tips, Dr. Fleckenstein lays out a clear, manageable plan to leave diabetes behind. And ending the struggle with blood sugar is just the start, as this 5-step plan also teaches readers how to shed 5, 10, or even 50 pounds along the way. Complete with success stories featuring people who followed the plan and not only lost weight (up to 50 pounds) but were also no longer diagnosed as diabetic, the Diabetes Cure teaches readers what's really causing their diabetes, shows them how to banish cravings once and

for all, and provides the tools to help them take back control of their lives. *The Game of Lives (The Mortality Doctrine, Book Three)* Turtleback Books Stay current in the ever-changing discipline of rheumatology with clear, reliable guidance from Hochberg's Rheumatology, one of the most respected and trusted sources in the field. Designed to meet the needs of the practicing clinician, this medical reference book provides extensive, authoritative coverage of rheumatic diseases from basic scientific principles to practical points of clinical management in a lucid, logical, user-friendly manner. Track disease progression and treat patients more effectively with the information on genetic findings, imaging outcomes, cell

and biologic therapies, rheumatoid arthritis, and SLE. Incorporate recent findings about pathogenesis of disease; imaging outcomes for specific diseases like RA, osteoarthritis, and spondyloarthropathies; cell and biologic therapies; and other timely topics. Remain up to date on the latest information in rheumatology through 13 brand-new chapters covering biomedical and translation science, disease and outcome assessment, new imaging modalities, early emerging disease, clinical therapeutics, patient management, and rehabilitation. Take advantage of expanded coverage of small molecule treatment, biologics, biomarkers, epigenetics, biosimilars, and cell-based therapies. Focus on the core knowledge needed for successful results

with each chapter co-authored by an internationally-renowned specialist in the field. Easily find the information you need thanks to a consistent, user-friendly format with templated content and large-scale images.
