This proceedings volume represents the culmination of nearly three years of planning, organizing and carrying out of a NATO Advanced Study Institute on Biomass Utilization. The effort was initiated by Dr. Harry Sobel, then Editor of Biosources Digest, and a steering committee

representing the many disciplines that this field brings together. . When the fiscal and logistical details of the original plan could not be worked out, the idea was temporarily suspended. In the spring of 1982, the Renewable Materials Institute of the State University of New York at the College of Environmental Science and Forestry in Syracuse, New York revived the plan. A number of modifications had to be made, including the venue which was changed from the U.S.A. to Portugal. Additional funding beyond the basic support provided by the Scientific Affairs Division of NATO had to be obtained. Ultimately there were supplementary grants from the Foundation for Microbiology and the Anne S. Richardson Fund to assist student participants. The New York State College of Forestry Foundation, Inc. provided major support through the Renewable Materials Institute. The ASI was held in Alcabideche, Portugal from September 26 to October 9, 1982. Eighty participants including fifteen principal lecturers were assembled at the Hotel Sintra Estoril for the

program that was organized as a comprehensive course on biomass utilization. The main lectures were supplemented by relevant short papers offered by the participants.

This joint OECD-ILO publication provides guidance on how local and regional governments can foster business-education partnerships in apprenticeship programmes and other types of work-based learning, drawing on case studies across nine countries. There has been increasing interest in apprenticeships which combine on the job training with classroom-based study, providing a smooth transition from school to work. There are benefits to both individuals and employers from participating in apprenticeships, including increased productivity and job quality.

Successful implementation is contingent on having a high level of employer engagement at the local level, notably in the design, development and delivery of programmes. The Global Banking

An ideal text for students taking a course in landscape ecology. The book has been written by very well-known practitioners and pioneers in the new field of ecological analysis.

Landscape ecology has emerged during the past two decades as a new and exciting level of ecological study. Environmental problems such as global climate change, land use change, habitat fragmentation and loss of biodiversity have required ecologists to expand their traditional spatial and temporal scales and the widespread availability of remote imagery, geographic information systems, and desk top computing has permitted the development of spatially explicit analyses. In this new text book this new field of landscape ecology is given the first fully integrated treatment suitable for the student. Throughout, the theoretical developments, modeling approaches and results, and empirical data are merged together, so as not to introduce barriers to the synthesis of the various approaches that constitute an effective ecological

synthesis. The book also emphasizes selected topic areas in which landscape ecology has made the most contributions to our understanding of ecological processes, as well as identifying areas where its contributions have been limited. Each chapter features questions for discussion as well as recommended reading.

Open Secret Information Science Reference Venetia Thompson takes the reader on a rollercoaster ride inside the final year of excess in the City. Working as one of only a few female inter-dealer bond brokers, the blonde ex-public school girl (nicknamed 'posh bird' and 'airbags') threw herself headlong into a 'work hard, play hard' culture of extravagance. Determined not to be bullied by the brash Essex wide boys and Alpha males around her, she partied with as much gusto as her colleagues, taking all the life offered: the £900 bottles of wine, the six-hour lunches, the days out at Cartier Polo, the Champagne-fuelled nights at lap-dancing clubs, the Chanel

handbags and the meaningless sex. Then, as easily as she'd slipped into the life, she was catapulted back out, when a satirical article she penned for *The Spectator*, spilled the beans on how her co-workers and bosses really behaved. Now, in *Gross Misconduct*, Thompson tells the full, unexpurgated story of what really went on in the mad, macho world of London's City traders during the boom years. *The Imagination Machine* Cambridge University Press

Social problems in many domains, including health, education, social relationships, and the workplace, have their origins in human behavior. The documented links between behavior and social problems have compelled governments and organizations to prioritize and mobilize efforts to develop effective, evidence-based means to promote adaptive behavior change. In recognition of this impetus, *The Handbook of Behavior Change* provides comprehensive coverage of contemporary theory, research, and practice on behavior change. It summarizes current

evidence-based approaches to behavior change in chapters authored by leading theorists, researchers, and practitioners from multiple disciplines, including psychology, sociology, behavioral science, economics, philosophy, and implementation science. It is the go-to resource for researchers, students, practitioners, and policy makers looking for current knowledge on behavior change and guidance on how to develop effective interventions to change behavior.

Over the past decade, businesses have faced relentless change on multiple dimensions, and the list of the world's largest companies has changed enormously. The keys to success are likely to be just as different for the new decade. Winning the '20s analyzes the new competitive environment that businesses face and outlines what will it take to win in the 2020s. To stay ahead of the trends that are reshaping business, leaders need to rethink existing assumptions and retool their companies. Both traditional incumbents and younger digital giants will face very different but equally critical challenges

in the 2020s—and would do well to learn from each other's strengths. This book discusses the new dimensions of competition that will affect corporate strategy in the next decade and how leaders can reinvent their organizations to be better suited for the new environment. The companies that succeed in the 2020s will look very different than they do today—they will have evolved their businesses to harness new technologies and reshaped their external relationships, organizations, and approaches accordingly. Winning the '20s will help business professionals as well as academics and students with an interest in strategy and leadership answer this critical question for the start of this decade: How should you prepare your company to avoid being left behind and emerge as a winner in a rapidly evolving business landscape?

Banks, Exchanges, and Regulators Springer Science & Business Media (Includes maps) From September 1943, when Allied troops came ashore near Salerno, until German surrender in May 1945, 312,000 Allied

soldiers were killed, wounded, or missing in Italy. Was a campaign that from the first faced the bleak prospect of coming to a dead end against the forbidding escarpment of the Alps worth that cost? Was the objective of tying down German troops to avoid their commitment in northwestern Europe all that the campaign might have accomplished? The answers to those questions have long been sought but, as is the nature of history, must forever remain conjecture. What is established bet, as this volume makes clear, is the tenacity and intrepidity displayed by American and Allied soldiers in the face of a determined and resourceful enemy, harsh weather, sharply convoluted terrain, limited numbers, and indefinite goals in what many of them must have looked upon as a backwater of the war. This volume relates the story of the last year of their struggle. Three volumes previously published tell of the campaign in northwest Africa, the conquest of Sicily and covert politico-military negotiations leading to surrender of the Italian armed forces,

and the campaign from the Allied landings on the mainland through the bitter disappointment of the amphibious assault at Anzio. This volume is thus the capstone of a four-volume series dealing with American military operations in the western Mediterranean.

Never have financial markets been subjected to a period of change as rapid and extensive as took place from the 1970s onwards. In the 1970s global financial markets were controlled by governments, compartmentalized along national boundaries, and segregated according to the particular activities they engaged in. This all disintegrated in the decades that followed under the pressure of market forces, global integration, and a revolution in the technology of trading. One product of this transformation was the Global Financial Crisis of 2008, which exposed the fragility of the new structures created and cast a long shadow that we still live in today. The response to that crisis has shaped the global financial system, which has been tested once again by the coronavirus pandemic. However, none of the outcomes of this transformation were inevitable, despite the forces at work. They were the product of decisions taken at the time for a multitude of reasons. Banks, exchanges, and regulators were faced

with unprecedented challenges and opportunities as a revolution swept away traditional ways of conducting banking, the methods used to trade in financial markets, and the rules and regulations employed to enforce

discipline. In this book Randal C. Michie provides an authoritative and unrivalled account of this upheaval based on a careful and exhaustive reading of the Financial Times over the last four decades, using it to provide a source of

material unmatched by any other in terms of depth and coverage. By studying what happened and why in real time, it is possible to explain the decisions taken that shaped the course of the transformation and its repercussions.
