**Data Mining: Concepts, Methodologies, Tools, and Applications** Gill & Macmillan Ltd

This book examines the South African Constitutional Court to determine how it has functioned during the nation's transition.

*The Analysis and Use of Financial Statements* Erich Schmidt Verlag GmbH & Co KG

This book analyzes the relationship between integrated reporting and audit quality within the European context, presenting empirical evidence and drawing on a broad review of the available literature in order to evaluate the ability of integrated reporting to enhance audit risk assessment.

Dedicated sections first elucidate the concepts of integrated reporting and audit quality. The main integrated reporting frameworks are compared, the role of integrated reporting within a firm's disclosure is examined, and all aspects of audit risk are discussed. The key question of the impacts of integrated reporting on the components of audit risk is then addressed in detail, with reference to empirical findings, their practical implications, and

their limitations. The concluding section explores the future of corporate reporting and the development of the next integrated reporting framework and summarizes the insights that the analysis in the book offers into the relationship between integrated reporting and audit quality in the European setting.

*Financial Information Analysis* SAGE

Explores the constant shifts in the technologies, business models and social uses of TV and radio, and explains the aspects of broadcast media which have attracted so much government policy attention, as well as what might happen to them in future.

*Understanding Management Control and Organisational Sense-making* Springer

Summary This book centres around three different areas; management control, organisations and information systems - in order to understand what is actually going on and to make sense of management control questions. Management control techniques used today could in many cases be traced back to industrialisation. With the help of computerised information systems, the speed and detail with which a manager could get a hold of important information has increased. Today, it has become even more important to be able to choose what information to work with and that the context in which it should be used is understood. Organisational sense-making is in many ways an interesting and important path to take in order to do this. When working with the management control function, it is important to understand the organisation where the work is undertaken. One important part of the function is planning and another is control. Both are needed in order for the management control function to work. Performance is often a key ingredient when trying to find out what is working in a plan and what is not and here the understanding for information becomes

necessary. Since the work is done within an organisation, both by managers and employees, it is also crucial to find ways to work with not only models, methods and techniques but also people and social dimensions. Key Features Managers and employees want to act in a meaningful way in general. The way planning and control is undertaken in an organization is to a large extent dependent on the way a manager interprets information about the organisation. Decisions and actions can be traced to the interpretation of a situation in the past and present. Since organisations are built on people, it is important to try to understand why they act in a certain way and how their understanding of the organisation is evolving. Management control has in many ways been described as a function that is dependent on different techniques and methods; however, it can also be described as a social process, focusing on decisions and actions. Information systems have come to play a crucial role in managing an organisation, especially when it comes to tracing performance. The demand for responsible and accountable management has led to an increased emphasis on meaningful decisions and actions. The Author Dr Krister Bredmar is associate professor at Linneaus University in Sweden. He has for more than 20 years worked with management control and organisational sense-making, both in theory and in practice. His research has been published both in academic journals and in books. Readership Scholars, students and practitioners. Contents The accounting heritage Corporate epistemology Thinking ahead The essence of management control Understanding performance The control concept in management control Reports, communication and stakeholders The essence of sense-making Organisations as a set of social relations Information systems and management control Individuals and organisations Organisational structure A social perspective A decisions context Techniques and functions Thinking and acting strategically Accounting tools Information and knowledge The performance paradox

**Broadcasting's Uncertain Future** John Wiley & Sons Incorporated

*Integrating Analyses in Mixed Methods Research* goes beyond mixed methods research design and data collection, providing a pragmatic discussion of the challenges of effectively integrating data to facilitate a more comprehensive and rigorous level of analysis. Showcasing a range of strategies for integrating different sources and forms of data as well as different approaches in analysis, it helps you plan, conduct, and disseminate complex analyses with confidence. Key techniques include: Building an integrative framework Analysing sequential, complementary and comparative data Identifying patterns and contrasts in linked data Categorizing, counting, and blending mixed data Managing dissonance and divergence Transforming analysis into warranted assertions With clear steps that can be tailored to any project, this book is perfect for students and researchers undertaking their own mixed methods research.

*Creating Entrepreneurial Space* The History Press

The aim of the book is to give non-accounting students a basic ability and confidence to read and use financial accounting reports and statements within their business or financial specialties. Many employees in business today are expected to be conversant with reported accounting information as part of their regular job responsibilities. However, they often have little formal training in using such information. For example, in most Western countries, corporate directors and senior executives are legally responsible for the content and quality of publicly reported accounting statements, yet typically have no accounting background or experience to help in the discharge of these responsibilities. The theme of the book is financial reporting as an essential and significant part of corporate governance. There is continuous pressure on companies from government and stakeholder groups to improve their governance and accountability structures and procedures. This book reveals how financial statements and related disclosures assist in good governance and accountability by providing relevant and reliable accounting signals of managerial performance.

**Impairment Test nach IAS 36** Routledge

The book, now in its Second Edition, gives a clear and in-depth analysis of financial statements and provides a harmonious blend of concepts and practices as followed by Indian companies. In this edition, the new format for income statement prescribed in Part II of Schedule VI of the Companies Act, 1956 has been incorporated. Implications of these changes on the analysis and interpretation of the statement have also been discussed. This textbook is primarily intended for undergraduate and postgraduate students of Commerce and Management. In addition, the book will be immensely useful to financial analysts, bank managers for credit analysis, professional accountants and business executives. KEY FEATURES □ Provides interpretation of data derived from financial statements. □ Gives an easy method, developed by NCAER, to predict corporate failure. □ Compares firms of different countries and their financial performances. □ Contains more than 172 examples of various types to help students prepare for exams.

**Proceedings of the International Conference on Marketing Management, Trade, Financial and Social Aspects of Business (MTS 2017), May 18-20, 2017, Košice, Slovak Republic and Tarnobrzeg, Poland** Chartridge Books Oxford

Dynamic economics, technological changes, increasing pressure from competition and customers to improve manufacturing and services are some of the major challenges to enterprises these days. New ways of improving organizational activities and management processes have to be created, in order to allow enterprises to manage the seemingly intensifying competitive markets successfully. Enterprises apply business optimizing solutions to meet new challenges and conditions. But also ensuring effective development for long-term competitiveness in a global environment. This is necessary for the application of qualitative changes in the industrial policy. "New Trends in Process Control and Production Management" (MTS 2017) is the collection of research papers from authors from seven countries around the world. They present case studies and empirical research which illustrates the progressive trends in business process management and the drive to achieve enterprise development and sustainability.
