The book combines the approaches of maritime history and ecological science to explore the evolution of life-forms and eco-systems in the ocean from a historical perspective, in order to establish and develop the sub-discipline of marine environmental history. Documentary records relating to the human activity, such as fishing, plus naturally occurring paleo-ecological data are analysed in order to determine the structure and function of exploited ecosystems. The book is divided into four chapter groups, the first concerned with Newfoundland and Grand Banks' fisheries, the second with the potential of historical sources to provide a history

of marine animal populations, the third explores the development of fisheries in the southern hemisphere during the twentieth century, and the final section explores the limitations of data and existing analysis of whale populations. The epilogue reiterates the suggestion that collaboration between historians and biologists is the key to furthering the sub-discipline.

Introduction to Automatic Control BRILL
A psychological thriller in the tradition of Patricia Highsmith about two couples caught in a web of conflicting passions while deep-sea diving off the beautiful Canary Islands In the late 1990s, Sven Fiedler and his girlfriend, Antje, left Germany for the island of Lanzarote, rejecting what Sven considered a vulgar culture of materialism and judgment.

The young couple set up a diving service catering to tourists eager to bask in the warm sunshine and explore the silent, gleaming marine paradise that makes this otherwise barren volcanic island such a remarkable retreat. Sven's approach was simple: take the mechanics of diving seriously, instruct his clients clearly, and stay out of their personal business as best he can. And life on the island goes smoothly until two German tourists--Jola von der Pahlen, a daytime soap star on the verge of cinematic success, and Theo Hast, a stalled novelist--engage Sven for a high-priced, intensive two-week diving experience. Staying in a guest house on Sven and Antje's property, the two visitors and their hosts quickly become embroiled in a tangle of jealousy and

suspicion. Sven is struck by Jola's beauty, her evident wealth, and her apparently volatile relationship with the much older Theo. Theo quickly leaps to the conclusion that Sven and Jola are having an affair, but, oddly, he seems to facilitate it rather than trying to intervene. Antje, looking on, grows increasingly wary of these particular clients. As the point of view shifts from one character to the next, the reader is constantly kept guessing about who knows what, and, more important, who is telling the truth. A brutal game of delusion, temptation, and manipulation plays out, pointing toward a violent end. But a quiet one, down in the underwater world beneath the waves.

This book presents the papers from the

Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting

the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in

compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and

aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-

duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

"The true beauty of Ernest Hillen's graceful writing is that the story is always the main character, never the writer. There is never any 'Look Ma -- no hands!' writing with him, never a hint of narcissism or self-importance. Instead there are words, perfectly chosen, that carry the reader along effortlessly, words that please, surprise and inform. Feature writing as it should be taught." --Roy MacGregor "Ernest Hillen established a standard for magazine writing in Canada that has rarely been matched by anyone. His quiet, astutely observed

reporting never draws attention to itself, but is always sharply focused on the subject at hand. 'A Memoir in Pieces' is a timely reminder of the power of clear, thoughtful writing." --David Macfarlane For nearly four decades, journalist Ernest Hillen travelled from coast to coast in his adopted country of Canada and throughout the wider world, crafting stories that were sometimes amusing, occasionally bleak, often poignant and always memorable. A Memoir in Pieces gathers together some of his favourites. Here you will meet a Montreal-born mercenary soldier who declares "I like to fight. Once you've tasted blood, you want more." You'll sit down to a lunch of hamburgers, pickles, tea and Scotch with Canadian television icon Bob Homme (better remembered as The Friendly

Giant). And you'll wade through the mud of a refugee camp housing the desperate souls displaced by the war that gave rise to an independent Bangladesh—a camp where, Hillen wrote, "I shot hundreds of pictures knowing many of the subjects wouldn't be living when this [story] saw print." Hillen's eye for detail and unfailing empathy bring to life people, places, and experiences both commonplace and exotic, including the small-town Canada of the 1970s, the Canadians behind the scenes of the Sonny and Cher Show, the last of Toronto's bespoke tailors, and the author's own life as a child in a Japanese internment camp on Java during the Second World War. *The Way of a Boy*, Hillen's later book-length memoir of those years, was hailed by the *Globe* and

Mail as "meticulous and astonishingly vivid" and by the Australian Book Review as "moving and true." That same vividness and honesty are on full display in these pieces originally published a generation and more ago, yet as timely and moving as when they first rolled off the presses.

This new edition continues to offer students research-based practical applications that they can relate to their personal and professional lives. Laura Berk, renowned

professor and researcher, has revised the text with new pedagogy, a heightened emphasis on the interplay between heredity and environment, and an enhanced focus on many social policy issues, while emphasizing the lifespan perspective throughout. The latest theories and findings in the field are made accessible to students in a manageable and relevant way. Berk's signature storytelling style invites students to actively learn beside the text's "characters." Students are provided with an especially clear and coherent understanding of the sequence and underlying processes of human development, emphasizing the interrelatedness of all domains—physical, cognitive, emotional, social—throughout the text narrative

and in special features. Berk also helps students connect their learning to their personal and professional areas of interest. Her voice comes through when speaking directly about issues students will face in their future pursuits as parents, educators, health care providers, social workers, and researchers. As members of a global and diverse human community, students are called to intelligently approach the responsibility of understanding and responding to the needs and concerns of both young and old. While carefully considering the complexities of human development, Berk presents classic and emerging theories in an especially clear, engaging writing style, with a multitude of research-based, real-world, cross-cultural, and multicultural examples.

Strengthening the connections among developmental domains and of theory and research with applications, this edition's extensive revision brings forth the most recent scholarship, representing the changing field of human development. Critics often charge that the major revision of U.S. military strategy which took place after the collapse of the Soviet Union was budget-driven rather than strategy-driven. Partially in response to this, the current strategic review, led by Secretary of Defense Rumsfeld, is intended to be "strategy-driven." Even so, the defense budget remains one of the central shaping features of U.S. national security and national military strategy. To understand what is possible in terms of defense transformation, one must first have a firm grasp of the budgetary context of strategic decisions. In the monograph that follows, Dr. Dennis Ippolito, one of the leading experts on the American defense budget, assesses this context. He shows that defense will continue to compete

with domestic programs for that portion of the budget allocated to discretionary spending, and argues that this is a competition in which defense needs have not fared especially well in the past and may not in the future.

The Measure of Madness: New York Review of Books

Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger

cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of

about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption--the amount of fuel consumed in a given driving distance--because energy savings are directly related to the

amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.
