economics. A student-friendly approach to understanding forecasting. Knowledge of forecasting methods is among the most demanded qualifications for professional economists, and business people working in either the private or public sectors of the economy. The general aim of this textbook is to carefully develop sophisticated professionals, who are able to critically analyze time series data and forecasting reports because they have experienced the merits and shortcomings of forecasting practice. *Income Inequality in Rural China* Routledge This book outlines and analyzes the economic development of China

between 1949 and 2007. Rather than being narrowly economic, the book addresses many of the broader aspects of development, including literacy, morality, demographics and the environment. The distinctive features of this book are its sweep and that it does not shy away from controversial issues. For example, there is no question that aspects of Maoism were disastrous but Bramall argues that there was another side to the whole programme. More recently, the current system of government has presided over three decades of very rapid economic growth. However, the author shows that this growth has come at a price. Bramall makes it clear

that unless radical change takes place, Chinese growth will not be sustainable. This large, comprehensive text is relevant to all those studying the economic history of China as well as its contemporary economy. It is also useful more generally for students and researchers in the fields of international and development economics.

Routledge  
The winners of the Nobel Prize in Economics upend the most common assumptions about how economics works in this gripping and disruptive portrait of how poor people actually live. Why do the poor borrow to save? Why do they

miss out on free life-saving immunizations, but pay for unnecessary drugs? In *Poor Economics*, Abhijit V. Banerjee and Esther Duflo, two award-winning MIT professors, answer these questions based on years of field research from around the world. Called "marvelous, rewarding" by the *Wall Street Journal*, the book offers a radical rethinking of the economics of poverty and an intimate view of life on 99 cents a day. *Poor Economics* shows that creating a world without poverty begins with understanding the daily decisions facing the poor.

Poverty, Reconstruction and Growth Springer  
Science & Business Media  
This book examines

the role of agriculture in the economic transformation of developing low- and middle-income countries and explores means for accelerating agricultural growth and poverty reduction. In this volume, Mellor measures by household class the employment impact of alternative agricultural growth rates and land tenure systems, and impact on cereal consumption and food security. The book provides detailed analysis of each element of agricultural modernization, emphasizing the central role of government in accelerated growth in private sector dominated agriculture. The book differs from the bulk of current conventional wisdom in

its placement of the non-poor small commercial farmer at the center of growth, and explains how growth translates into poverty reduction. This new book is a follow up to Mellor's classic, prize-winning text, *The Economics of Agricultural Development*. Listed as a Best Books of 2017: Economics by Financial Times.

The second edition of the *Impact Evaluation in Practice* handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely

across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to

conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy

makers looking to build better evidence around what works in development.

**A Radical Rethinking of the Way to Fight Global Poverty**

This collection of essays honors a remarkable man and his work. Erik Thorbecke has made significant contributions to the microeconomic and the macroeconomic analysis of poverty, inequality and development, ranging from theory to empirics and policy. The essays in this volume display the same range. As a collection they make the fundamental point that deep understanding of these phenomena requires both the micro and the

macro perspectives together, utilizing the strengths of each but also the special insights that come when the two are linked together. After an overview section which contains the introductory chapter and a chapter examining the historical roots of Erik Thorbecke's motivations, the essays in this volume are grouped into four parts, each part identifying a major strand of Erik's work—Measurement of Poverty and Inequality, Micro Behavior and Market Failure, SAMs and CGEs, and Institutions and Development. The range of topics covered in the essays, written by leading authorities in their own areas, highlight the

extraordinary depth and breadth of Erik Thorbecke's influence in research and policy on poverty, inequality and development. Acknowledgements These papers were presented at a conference in honor of Erik Thorbecke held at Cornell University on October 10-11, 2003. The conference was supported by the funds of the H. E. Babcock Chair in Food, Nutrition and Public Policy, and the T. H. Lee Chair in World Affairs at Cornell University.

The Urban Informal Sector is a collection of papers presented at a multi-disciplinary conference on "The urban informal sector in the Third World," organized by the Developing Areas Study Group of the Institute of British Geographers in London on March 19, 1977. Contributors offer

critical perspectives on the urban informal sector, with emphasis on employment and housing policies. Topics covered range from general reviews and national case studies to detailed studies of particular occupations in individual cities. This book is comprised of 12 chapters and begins by reviewing the relevance of dualist models of economic activities and enterprises, as applied to Third World countries, concentrating on the origins, diffusion, and deficiencies of the formal/informal dualist classification. Subsequent chapters explore the informal sector debate in studies of Third World poverty and employment; the nature of informal-

formal sector relationships; the structure of the labor markets in the "organized" and "unorganized" sectors of urban economies in South India; and the problem of urban poverty, its relation to employment, and rising spatial inequalities in Brazil. Capitalist and petty commodity production in Nigeria is also discussed, along with John Turner's views on housing policy. The final chapter looks at the competition between the informal and formal sectors in the retail industry in Santiago, Chile. This monograph will be of interest to social and economic policymakers.

Industrialization in Africa explores the issues that confront development policy in the context of the MDGs and the post-2015 development agenda from an African perspective. The book argues that development is an ultimate outcome of sustainable, equitable industrialization, and that any development agenda for the future has to ensure that industrialization is fostered in a way that makes economies independent and responsive to the needs of all citizens. Future challenges for sustainable industrialization in Africa, based upon the differences in its current industrialization trajectories, are

discussed to ensure that industrial growth results in positive economic and social outcomes in the context of the post-2015 development agenda.

Fiscal policy is critical to the development of poor countries. Public spending on pro-poor services and public goods must be increased, tax revenues must be mobilized, and macro-economic stabilization must be achieved without inhibiting growth, poverty reduction and post-conflict reconstruction. This book provides both a comprehensive and balanced guide to the current policy

debate and new results on the development impact of fiscal policies. It is essential reading for students of development economics as well as all those seeking to improve policy-effectiveness.
