Contemporary Decision Making IGI Global

An Australasian adaptation of Robert Grant's successful text with examples from Australia, New Zealand and the Asia-Pacific region. With an emphasis on competitive advantage, this text provides students with an up-to-date and comprehensive coverage of core topics and concepts including the impact of the global financial crisis. Consideration is given to all types of organisations, including public sector organisations, and steers away from an excessive focus on large organisations. The text also incorporates up-to-date detailed cases on Australasian organisations, such as Cascade Brewery Company, Malaysian Airlines and Bunnings Warehouse.--Publisher.

Student-friendly stats! Berenson's fresh, conversational writing style and streamlined design helps students with their comprehension of the concepts and creates a thoroughly readable learning experience. Basic Business Statistics emphasises the use of statistics to analyse and interpret data and assumes that computer software is an integral part of this analysis. Berenson's 'real world' business focus takes students beyond the pure theory by relating statistical concepts to functional areas of business with real people working in real business environments, using statistics to tackle real business challenges.

The digitization of healthcare has become almost ubiquitous in recent years, spreading from healthcare organizations into the homes and personal appliances of practically every citizen. Thanks to the collective efforts of health professionals, patients and care providers as well as systems developers and researchers, the entire population of Europe is able to participate in and enjoy the benefits of digitized health information. This book presents the proceedings of the 26th Medical Informatics in Europe Conference (MIE2015), held in Madrid, Spain, in May 2015. The conference brings together participants who share their latest achievements in biomedical and health Informatics, including the role of the user in digital healthcare, and provides a forum for discussion of the inherent challenges to design and adequately deploy ICT tools, the assessment of health IT interventions, the training of users and the exploitation of available information and knowledge to further the continuous and ubiquitous availability and interoperability of medical information systems. Contributions address methodologies and applications, success stories and lessons learned as well as an overview of on-going projects and directions for the future. The book will be of interest to all those involved in the development, delivery and consumption of health and care information.
