Any significant organizational level change initiative is dependent on the engagement of the people working in that organization. Without engagement, change will falter and ultimately fail. Engaging Change goes behind the scenes of change management to help managers, consultants and practitioners understand why some things work and why others don't.

Engaging Change addresses current challenges such as how to understand the environmental context driving the need for change; how to initiate and sustain momentum throughout the change programme; how to institutionalize structural and behavioural change; and how to create compelling visions. With case studies from Sony, Nestlé, Redcats (who own La Redoute, for example) and the British Army, the text provides practice-based insights into the realities of leading sustainable change. *Valuing Specific Assets in Divorce* Kogan Page Publishers
General Motors and IBM have been battered to their cores. Jack Welch, the chairman of General Electric, called the frenzied

competition of the 1980's "a white knuckle decade" and said the 1990s would be worse. In this pathbreaking book that will define this new age of "hypercompetition," Richard D'Aveni reveals how competitive moves and countermoves escalate with such ferocity today that the traditional sources of competitive advantage can no longer be sustained. To compete in this dynamic environment, D'Aveni argues that a company must fundamentally shift its strategic focus. He constructs a brilliant operational model that shows how firms move up "escalation ladders" as advantage is continually created, eroded, destroyed, and recreated through strategic maneuvering in four arenas of competition. Using this "Four Arena" analysis, D'Aveni explains how competitors engage in a struggle for control by seeking leadership in the arenas of "price and quality," "timing and know-how," "stronghold creation/invasion," and "deep pockets." Winners set the pace in each of these four competitive battlegrounds. Using hundreds of detailed examples from hypercompetitive industries such as computers, software, automobiles, airlines, pharmaceuticals, toys and soft drinks, D'Aveni demonstrates how hypercompetitive firms succeed in dynamic markets by disrupting the status quo and creating a continuous series of temporary advantages. They seize the initiative, D'Aveni explains, by employing a set of strategies he calls the "New 7-S's" Superior Stakeholder Satisfaction, Strategic Soothsaying, Speed, Surprise, Shifting the Rules of Competition, Signaling Strategic Intent, and Simultaneous and Sequential Thrusts. Paradoxically, firms must destroy their competitive advantages to gain advantage, D'Aveni shows. Long-term success depends not on sustaining an advantage through a static, long-term strategy, but instead on

formulating a dynamic strategy for the creating, destruction, and recreation of short-term advantages. America must embrace the new reality of hypercompetition, D'Aveni concludes in a compelling analysis of the potential chilling effect of American antitrust laws on competitiveness. This masterful book, essentially an operating manual of strategy and tactics for a new era, will be required reading for managers, planners, consultants, academics, and students of hypercompetitive industries.

Based on a ten-year examination of control systems in over 50 U.S. businesses, this book broadens the definition of control and establishes a critical bridge between the disciplines of strategy and accounting and control. In addition to the more traditional diagnostic control systems, Simons identifies three new control systems that allow strategic change: belief systems that communicate core values and provide inspiration and direction, boundary systems that frame the strategic domain and define the limits of freedom, and interactive systems that provide flexibility in adapting to competitive environments and encourage organizational learning. These four control systems, according to Simons, will provide managers with the basic levers for pursuing

strategic objectives.

Research, Social Media, grade: 1,3, University of applied sciences, Munich, language: English, abstract: The automotive industry is facing the biggest changes in its more than 100 years of existence. At the end of this decade, the first electric vehicle is going to enter the mass market that can compete on product features, comfort and price with the internal combustion engines. People keep moving into urban areas. The requirements toward future mobility increase. Some countries already decided to prefer electric vehicles to conventional cars. Profits will shift to other markets or segments. Incumbents must align their current strategies to keep their market share in the future and participate in future profit pools of the automotive industry. BMW and Tesla have different strategic approaches to the upcoming changes in the industry. BMW, as many other OEMs, is aware of future challenges and disruptive forces and has much more resources to manage the required investments in R&D than smaller start-ups. However, disruptive forces come from lower functionality and low-cost products that are usually overlooked by dominant firms in an industry. This research analyzes the two automotive companies BMW and Tesla by using the common strategy analysis tools. First, the firms' external environment is analyzed by using the PESTEL analysis, describing relevant trends that affect the strategic decision of the two companies. An industry overview with future projections is provided. Secondly, an internal analysis is performed. SWOT analysis and the VRIO framework form the basis to define the strengths, weaknesses, unique recourses and capabilities of BMW and Tesla. The conclusion provides an overall discussion of the most important findings emerging from the analysis with regard to the business

operations and the existing business models of the two car manufacturers. Furthermore, important implications for the adaption and adjustment processes are discussed.

Now beyond its eleventh printing and translated into twelve languages, Michael Porter's The Competitive Advantage of Nations has changed completely our conception of how prosperity is created and sustained in the modern global economy. Porter's groundbreaking study of international competitiveness has shaped national policy in countries around the world. It has also transformed thinking and action in states, cities, companies, and even entire regions such as Central America. Based on research in ten leading trading nations, The Competitive Advantage of Nations offers the first theory of competitiveness based on the causes of the productivity with which companies compete. Porter shows how traditional comparative advantages such as natural resources and pools of labor have been superseded as sources of prosperity, and how broad macroeconomic accounts of competitiveness are insufficient. The book introduces Porter's "diamond," a whole new way to understand the competitive position of a nation (or other locations) in global competition that is now an integral part of international business thinking. Porter's concept of "clusters," or groups of interconnected firms, suppliers, related industries, and institutions that arise in particular locations, has become a new way for companies and governments to think about economies, assess the competitive advantage of locations, and set public policy. Even before publication of the book, Porter's theory had guided national reassessments in New Zealand and elsewhere. His ideas and personal involvement have shaped strategy in

countries as diverse as the Netherlands, Portugal, Taiwan, Costa Rica, and India, and regions such as Massachusetts, California, and the Basque country. Hundreds of cluster initiatives have flourished throughout the world. In an era of intensifying global competition, this pathbreaking book on the new wealth of nations has become the standard by which all future work must be measured.
