The cat has been used as a subject for dissection in the study of mammalian anatomy for almost two centuries. The very popular Pictorial Anatomy of the Cat by Stephen G. Gilbert, originally published in 1967 and now in its 12th printing, has been used in countless laboratories as a guide to dissection and supplement to introductory textbooks. Outline of Cat Anatomy is an abridged version of the original guide, modified for practical use in one-semester courses. It employs anatomical terms used in human rather than veterinary anatomy and includes illustrations of human anatomy that may be compared with those of the cat, especially useful for the many students who do not have access to human dissections. Gilbert's earlier Pictorial Anatomy of the Cat is "an excellent, well-illustrated dissection guide for use in courses in comparative anatomy. The text is informative and accurate, and instructions for dissection are clear and helpful.... Highly recommended." □Choice

Gray's Dissection Guide for Human Anatomy McGraw-Hill Science/Engineering/Math

Understanding anatomical structures is one thing. Knowing how to dissect them is another. More effectively than any other resource, this user-friendly manual demonstrates how to successfully dissect the trunk, head and neck, pelvis and perineum, and upper and lower extremities. Extensively class

tested and reviewed, it is proven to reduce the time you spend in dissection...without skimping on the details that you need to know! Over 400 crisp, detailed line drawings and concise, step-by-step instructions show and tell you exactly where and how to cut and what to look for. Coverage zeroes in on the specific "hands-on" guidance you need-omitting clinical side notes that might be interesting to read, but are not always what you need in the lab. Page references to Drake et al.: Gray's Anatomy for Students, Netter: Atlas of Human Anatomy, 4th Edition, and Moses et al.: Atlas of Clinical Gross Anatomy point you towards outstanding visual guidance on anatomical structure and function. STUDENT CONSULT access lets you browse through the complete contents of the book online...review cadaver dissection photographs before going into the lab...test your knowledge with review questions and answers...and follow "integration links" to related bonus material from Gray's Anatomy for Students, Atlas of Clinical Gross Anatomy, and other books.

Guide to Regional Ruminant Anatomy Based on The Dissection of The Goat LWW

Succinctly describes the steps of dissection and identification of the dissected structures in a single volume.

[A Dissection Guide and Atlas to the Mink, Second Edition](#) Cognella Academic Publishing

A clear, concise and accessible dissection guide for undergraduate allied health sciences and medical students encountering dissection for the first time Practical Anatomy is designed to enable novice anatomists to grasp the biological background of the human anatomy while understanding its complexity within the clinical context. As a guide to the dissection of the human cadaver, it provides an account of the biological and systemic

foundations of the human body. In keeping with the tradition of its predecessor this revised edition is primarily aimed at undergraduate allied health sciences and medical students who are encountering dissection for the first time and are intimidated by the volume of information to be understood. In addition, some dissections of more complex regions of the anatomy have been integrated into the text for more advanced students. This version has built on the solid foundation of the first edition of Practical Anatomy and Man's Anatomy, incorporating all the features unique to these texts while updating the methodology and including the latest anatomical terminology as outlined in the Terminologia Anatomica. The text and illustrations have been simplified to provide a clear, concise and accessible dissection guide.

This is a lab manual for a college-level human anatomy course. Mastery of anatomy requires a fair amount of memorization and recall skills. The activities in this manual encourage students to engage with new vocabulary in many ways, including grouping key terms, matching terms to structures, recalling definitions, and written exercises. Most of the activities in this manual utilize anatomical models, and several dissections of animal tissues and histological examinations are also included. Each unit includes both pre- and post-lab questions and six lab exercises designed for a classroom where students move from station to station. The vocabulary terms used in each unit are listed at the end of the manual and serve as a checklist for practicals.

The Human Dissector is a guidebook for today's student studying human anatomy. The Human Dissector presents the student with over 70 topics, each corresponding to one dissection session, giving immediate access to the essentials and helping the student to avoid any extraneous detail. Clinical points are emphasised alongside the details of dissection, stressing the practical application of anatomy to medicine. Extensively illustrated and carefully designed, the regional approach of The Human Dissector complements the systematic approach of Roger's Textbook of Anatomy, providing a complete guide to human anatomy. Alone, The Human Dissector is a user-friendly manual of dissection which helps to reinforce the student's understanding of anatomy.

Finley's Interactive Cadaveric Dissection Guide is a step-by-step instructional text with DVD for cadaveric dissection. The dissection is presented regionally on the body and includes the trunk, extremities, face, neck, thorax, abdomen and viscera. Other dissections include all joints of the extremities, a spinal laminectomy, and dissections of the larynx, pharynx, TMJ, and pelvic anatomy for both male and female. Each section is illustrated using line drawings, digital still images. The DVD provides three dimensional explanations of human cadaveric techniques along with verbal instructions. Each chapter of the text includes illustrations, still color photos of the steps, and references to the DVD.

Dissection Manual with Regions & Applied Anatomy Springer Science & Business Media

This full-color dissection manual is intended to provide an introduction to the anatomy of the mink for biology, zoology, nursing, or preprofessional students who are taking a laboratory course in anatomy and physiology or basic vertebrate anatomy. Features: Multiple images of the muscle, skeletal, and organ systems provide a complete picture of the layers of mink anatomy. Detailed instructions allow students to efficiently and accurately perform all of the dissections. Superior quality, completely labeled, full-color photographs and illustrations offer excellent visual references. The text is clearly written, and dissection instructions are set apart in boxes to aid the students in the lab. Informative tables summarize key information, and student objectives establish the purpose of each chapter and lab. The dissection guide is loose-leaf and three-hole drilled for convenience in the laboratory. Because prepared mink skeletons are not always available, the cat skeleton is utilized in the skeletal system chapter along with pictures of mink structures, as appropriate.

Discovering Anatomy: A Guided Examination of the Cadaver is designed for anatomy courses that are fortunate enough to have cadavers available; however, it may also be used in courses that utilize other means, such as models, to achieve an understanding of anatomical structures. The majority of this workbook is composed of full-page color photographs of carefully dissected cadavers, black-and-white line art to color and label, and other

activities to guide students through the structures and layers of the human body.

The Human Brain in Dissection will significantly update the previous edition published in 1988. The last 20 years have seen a significant shift in the way that neuroanatomy is taught in both undergraduate and graduate neuroscience courses, as well as doctorate courses: not only has the time allocated for these courses been reduced, but the methodologies for teaching have become more focused and specific due to these time constraints. The Human Brain in Dissection, Third Edition will provide detailed features of the human brain with the above limitations in mind. 50 new plates will be added to the existing 123 in order to permit the student to see all salient structures and to visualize microscopic structures of the brain stem and spinal cord. Each chapter will cover a specific area of the human brain in such a way that each chapter can be taught in one two-hour neuroanatomy course. New to this edition is the inclusion of a section in each chapter on clinically relevant examples. Each chapter will also include a specific laboratory exercise. And finally, the author has included a question and answer section that is relevant to the USMLE, as recommended readings, neither of which were included in the previous editions. This new edition of The Human Brain in Dissection will allow the student to: understand basic principles of cellular neuroscience; learn gross and microscopic anatomy of the central nervous system (Brain, brainstem, and spinal cord); relate the anatomy of central neural pathways to specific functional systems; be able to localize and name a CNS lesion when presented with neurological symptoms, and appreciate higher cortical functions and how they relate to the practice of neurology. neuroscience

A Dissection Guide & Atlas to the Rabbit Wiley-Blackwell

This full-color manual is a unique guide for students conducting the comparative study of representative vertebrate animals. It is appropriate for courses in comparative anatomy, vertebrate zoology, or any course in which the featured vertebrates are studied. Includes coverage of the lamprey, dogfish shark, perch, mudpuppy, bullfrog, pigeon, and cat. Evolutionary concepts, comparative morphology, and histology are covered comprehensively. Loose-leaf and three-hole drilled.

"Dissection Simplified" is a set of worksheets designed to teach students how to learn anatomy and complete dissections even when an instructor is not available to answer questions. The manual helps students understand how to complete the steps in a dissection using the cat as a model for major body systems. The language and tone are student-friendly and free of unnecessary technical information, focusing instead on supporting students, and walking them through the process of the lab exercise as they work independently. "Dissection Simplified" also addresses common problems students experience when completing dissections, such as finding specific muscles when they are not immediately visible, knowing when a dissection exercise is truly complete, and successfully preparing for examinations on dissection. "Dissection Simplified" is an effective companion lab manual to standard anatomy textbooks. It can be used in lower division general human anatomy courses at universities and community colleges. It may also be suitable for high school anatomy classes which use cat dissections to study non-modeled body systems. Danielle Dodenhoff earned her Ph.D. from the Department of Evolution, Ecology, and Organismal Biology at Ohio State University, Columbus. Dr. Dodenhoff is a lecturer at California State University, Bakersfield where she teaches courses in human anatomy, perspectives in biology, and integrated science. She has written and presented extensively on acoustic signals in various woodpecker species. Dr. Dodenhoff is a member of the American Ornithological Union and the Animal Behavior Society.

Atlas of Human Anatomy Churchill Livingstone

This new manual takes a systemic approach with each chapter focusing on one body system. The order of chapters follows the traditional order found in anatomy or anatomy and physiology courses. The photos include skeletal images, photomicrographs of histology and cadaver dissections. This atlas includes full-color photographs of actual cadaver dissections instead of idealized illustrations, to accurately and realistically represent anatomical structures.

Human Anatomy Lab Manual Plural Publishing

This full-color dissection guide is intended for students taking Mammalian Anatomy, Comparative Anatomy, General Biology, or Anatomy & Physiology courses and contains 175 photographs plus many full-color illustrations. The combination of a good anatomy text, clear discussions of dissection techniques, and well-executed photographs and illustrations makes this a definitive book in biology curricula.

Anatomy Morton Publishing Company

This 11th edition has been reorganized to separate the clinical notes and details from the dissection instructions. A brief introduction precedes each structure's dissecting instructions, and blank observation boxes are provided for insertion of notes. Line drawings and radiographs are included.

Discovering Anatomy Wits University Press

This is a straightforward, hands-on dissection guide for human gross anatomy. Practical and easy to follow, its ideal balance of succinct descriptive text and detailed illustrations helps students to navigate through a dissection quickly and skillfully. Pairs crisp line drawings with concise, bulleted

instructions that can be followed easily. Presents separate sections on the trunk, head and neck, pelvis and perineum, and upper and lower extremities. Focuses on "where and how to cut," with a minimum of clinical side notes. Offers a companion web site with cadaver photographs that students can review before going into lab, as well as a "Questions and Answers" section for self testing.
